Subject: Standby Proceeding
Attachments: Fred DeSanti DGDefinition.docx

As discussed at the last Standby Working Group meeting, please find a proposed definition of Distributed Generation and Rate Modeling Criteria drafted by Fred DeSanti. Please provide by August 26, 2013, your comments on the proposed definition of distributed generation and the proposed systems/technologies that would be considered Distributed Generation Resources. The utilities shall also provide their excel spreadsheets on the calculation of rate impacts using the suggested rate modeling criteria set forth in the attached. If the criteria do not apply to a utility's standby tariff, such utility shall provide an explanation. If there are other criteria that should also be included, please provide the rate impact calculation that incorporates the additional criteria supported by a full and detailed explanation.

Thank you,

Alice
