Caveats: NONE

Lauren,  
If the construction activities are staying out of any Corps jurisdictional waters of the United States including wetlands, then it would appear that there are no regulated jurisdictional activities associated with the proposal.

Subject: [EXTERNAL] RE: Wetlands Protection Determination Request

Good morning Jim,

Please see the attached site map that was created to help visualize how the document scan05523.pdf (sent to you previously) lies on the site location map for site F. Hopefully this, with the budget document that was sent previously, will help to show where all of the planned construction activities will be carried out. Again, the contractor working on this project has let us know that all roads that are included in this property will be repaved in kind, without extending any further than what is currently paved. Please review the attached map and additional documents sent previously. Let me know what else you will need, if anything, to make a determination so that we can relay these needs and get you the information needed.

Thanks again for your time and patience.

Have a Merry Christmas,

Lauren LeBlanc

Subject: Wetlands Protection Determination Request

Good Afternoon,

I am conducting an environmental review on behalf of the New Jersey Department of Environmental Protection for a CDBG Disaster Grant application under the Hurricane Sandy Disaster Recovery Program. The proposed project activities include the reconstruction and improvement of five different roads-Kero Road, Jomike Court, Barell Avenue, Eastern Way, and Starke Road-and associated drainage inlets within the Borough of Carlstadt, Bergen County, New Jersey. Additionally, storm water system improvements will be completed at 455 16th Street. The scope of this project will include the reconstruction of various outfalls, the installation of a backflow preventer / check valve, the purchase of equipment for ongoing maintenance (Caterpillar wheel loader, Caterpillar skid steer, dump truck, and a camera truck), the purchase of Tiger Dams, and the reconstruction of roadway surfaces. Activities at the Kero Road project location will involve street repaving (approximately 110,000 square feet) from the intersection of Kero Road and Washington Avenue through the end of Kero Road (cul-de-sac). Activities at the Jomike Court project location will involve street repaving (approximately 52,000 square feet) of Jomike Court, southeast of Washington Avenue (intersects with Washington Avenue at start and end points). Activities at the Barell Avenue project location will involve street repaving (approximately 92,000 square feet) from the intersection of Barell Avenue and Washington Avenue through the south end of Barell Avenue. Activities at the Eastern Way project location will involve Street repaving (approximately 32,400 square feet) from the intersection of Eastern Way and Moonachie Avenue through the south end of Eastern Way. Activities at the Starke Road project location will involve street repaving (approximately 144,000 square feet) from the intersection of Starke Road and Gotham Parkway to the Carlstadt - Moonachie municipal line as well as the reconstruction of three handicap ramps. Activities at the 455 16th Street project location will involve storm water system improvements with associated soil erosion and sediment control as well as associated excavation and concrete reconstruction. Storm water system improvements include installing a concrete headwall, four 10' concrete manholes, 575 linear feet of elliptical concrete pipe, a TideFlex valve, and five storm connections. All of these combined reconstruction activities will address the damage to the drainage system and roads caused by Superstorm Sandy and associated flooding events. The final product will result in new and improved roadways and drainage systems for the

associated areas. These improvements do not involve any change in land use, will allow for the continued safe use of these roadways during future potential flooding events, and will effectively reduce damage from flooding to nearby public and private infrastructure by allowing for proper and timely storm water drainage.

Site location maps of each site showing NJDEP Mapped Wetlands, photo logs for each site, a site budget, schematic drawings, a plat of the proposed construction at 455 16th Street, a cost estimate provided by the contractor working on the project , comprehensive site maps showing positions of the entire project area, and the consultation that was carried out between URS and the NJDLUR are attached in this email and in 2 following emails due to size. Please let me know if there is any additional information or files you require for your review.

All sites except for sites "a" and "d" are adjacent to NJDEP mapped wetlands. Therefore, I am requesting your review of the site for compliance with Wetlands Protection. Please let me know if you need any additional information to complete your review.

Additional Project Specific Information:

Basic Information

- Agency - New Jersey Economic Development Authority
- The Borough of Carlstadt is the Responsible Entity
- Location - Kero Road, Jomike Court, Barrell Avenue, Eastern Way, Starke Road (roads)  
-455 16th Street (storm water drainage improvements)
- County - Bergen County

Background

- Continual flooding (3 to 4 times per year) contribute to damages to public and private infrastructure.
- Damage to drainage system is listed as being a result of debris accumulation from previous flooding events

Due to the urgency of this matter, please review and respond at your earliest convenience.

Thank you for your time,
