

February 14, 2020

Subject: Field Inspection

RE: Southampton Township, Burlington County, New Jersey

The site inspection was conducted on February 13, 2020 by Niall Conway, Staff Archaeologist
And Kim Meersma, Environmental Planner.

At the time of the inspection the weather was sunny, and approximately 30 degrees. Dewberry inspectors walked the perimeter of the properties (area of proposed work).

The proposed project would acquire residential properties on a voluntary basis and demolish, remove, and dispose of all man-made features on the properties, such as dwellings, foundations, sheds, garages, fences, and driveways. Wells and septic systems would be abandoned in place and all utilities would be disconnected. The properties would be graded and left in a stabilized condition (i.e. planted with native grasses or other approved native vegetative cover that will support soil stability). The acquired properties would be permanently preserved as open space and serve as natural buffers against future storms and floods.

The proposed project would be located at 52 residential properties in Southampton, Burlington County, New Jersey.

No hazardous or toxic materials were observed during the site visit. No wetlands were observed during the site visit.
