## LETTER OF TRANSMITTAL

May 16, 1929.

Dr. Henry B. Kümmel, Director,  
Department of Conservation and Development,  
Trenton, New Jersey.

DEAR SIR:

I am transmitting herewith a report on surface water supply of New Jersey prepared by Mr. O. W. Hartwell, district engineer, United States Geological Survey. The report presents the results of the investigations of stream flow to September 30, 1928, which have been made under the immediate direction of the author working in co-operation with the Division of Waters.

In 1921 a co-operative agreement was made between the department and the survey for the re-establishment of stream flow measurement work on the streams of the State. Under the agreement the survey publishes some of the records annually in their *Water-Supply Papers*. However, this report has been prepared in order to assemble these records in one volume and also certain other records of New Jersey streams which have been published previously in Federal, State, or municipal reports. The results include data collected at more than forty different gaging stations throughout the State and some of the records are continuous since 1891.

It is believed that this report will be a convenient reference for many people of the State who are in need of accurate information on the flow of the streams over a period of years to aid them in studying problems dealing with the development and use of our surface-water resources.

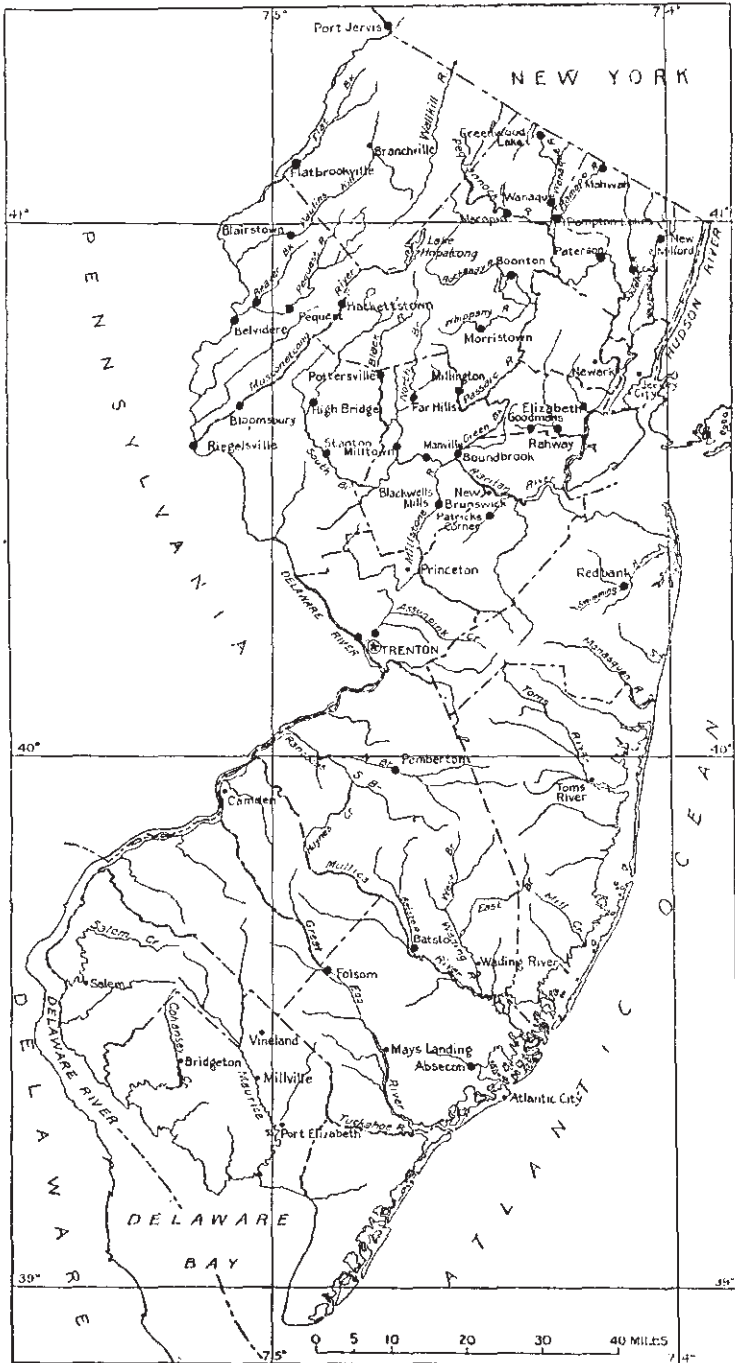

I therefore recommend that this report on the Surface Water Supply of New Jersey be published as a bulletin of the department's reports, in order that the information contained therein may be made available to the people of the State.

Respectfully submitted,

HOWARD T. CRITCHLOW,  
*Chief, Division of Waters.*

Approved for publication,

HENRY B. KÜMMEL, *Director.*

Map showing location of gaging stations.

# **SURFACE WATER SUPPLY OF NEW JERSEY**

By O. W. HARTWELL, *District Engineer.*

## **INTRODUCTION.**

The purpose of this report is to present in one volume the results of stream-flow measurements which have been made by various organizations.

A part of the data presented in this report has been published previously in Federal, State, or municipal reports.

Prior to 1921 the United States Geological Survey carried on some stream-gaging work in New Jersey mostly during the period from 1903 to 1907 when the work was curtailed because of lack of funds. In 1919 the Department of Conservation and Development and the North Jersey District Water Supply Commission established a few stream-gaging stations.

In 1921 the Department of Conservation and Development entered into a co-operative agreement with the United States Geological Survey, under which the survey resumed stream gaging in co-operation with the department. As the new work expanded other Federal and State departments, municipalities, power companies, industrial companies, and other private parties have rendered valuable assistance in connection with the work.

## EXPLANATION OF DATA

---

The data presented in this report cover all records available through September 30, 1928. At the beginning of January much of the precipitation in the preceding three months is stored as ground water in the form of snow or ice, or in ponds, lakes, and swamps, and this stored water passes off in the streams during the spring break-up. At the end of September, on the other hand, the only stored water available for run-off is possibly a small quantity in the ground; therefore the run-off for the year beginning October 1 is practically all derived from precipitation within that year.

The base data collected at gaging stations consist of records of stage, measurements of discharge, and general information used to supplement the gage heights and discharge measurements in determining the daily flow. The records of stage are obtained either from direct readings on a staff gage, chain gage, or from a water-stage recorder that gives a continuous record of the fluctuations. Measurements of discharge are made with a current meter. The general methods are outlined in standard textbooks on the measurement of river discharge.

From the discharge measurements rating tables are prepared that give the discharge for any stage. The application of the daily gage height to these rating tables gives the daily discharge from which the monthly and yearly mean discharge is determined.

The data presented for each gaging station in the area covered by this report comprise a description of the station, a table showing the daily discharge of the stream, and a table of monthly and yearly discharge and run-off.

The description of the station gives, in addition to statements regarding location and equipment, information in regard to any conditions that may effect the permanence of the stage-discharge relation, shifting of control, and also information as to diversions that decrease the flow at the gage, artificial regulation, and maximum and minimum recorded stages.

The table of daily discharge gives, in general, the discharge in second-feet corresponding to the mean of the gage heights read each day. At stations on streams subject to sudden or rapid diurnal fluctuation the discharge obtained from the rating table and the mean daily gage height may not be the true mean discharge for the day. Such stations are equipped with water-stage recorders and the mean daily discharge is obtained by averaging discharge at regular intervals during the day, or by using the discharge integrator, an instrument operating on the principle of the planimeter, containing as an essential element the rating curve of the station.

(a) *Current meter.*

(b) *Automatic water-stage recorder.*

In the table of monthly discharge the column headed "Maximum" gives the mean flow for the day when the mean gage height was highest. As the gage height is the mean for the day, it does not indicate correctly the stage when the water surface was at crest height and the corresponding discharge was consequently larger than given in the maximum column. Likewise in the column headed "Minimum" the quantity given is the mean flow for the day when the mean gage height was lowest. The column headed "Mean" is the average flow in cubic feet per second during the month. On this average flow computations recorded in the remaining columns, which are defined on page 4, are based.

## DEFINITION OF TERMS

---

The volume of water flowing in a stream—the “run-off” or “discharge”—is expressed in various terms, each of which has become associated with a certain class of work. These terms may be divided into two groups—(1) those that represent a rate of flow, as second-feet, million gallons per day, and discharge in second-feet per square mile, and (2) those that represent the actual quantity of water, as run-off in inches, acre-feet, and millions of gallons. The principle terms used in this report are second-feet, second-feet per square mile and run-off in inches. They may be defined as follows:

“Second-feet” is an abbreviation for “cubic feet per second.” A second-foot is the rate of discharge of water flowing in a channel of rectangular cross section one foot wide and one foot deep at an average velocity of one foot per second. It is generally used as a fundamental unit from which others are computed.

“Second-feet per square mile” is the average number of cubic feet of water flowing per second from each square mile of area drained, on the assumption that the run-off is distributed uniformly both as regards time and area.

“Run-off in inches” is the depth to which an area would be covered if all the water flowing from it in a given period were uniformly distributed on the surface. It is used for comparing run-off with rainfall, which is usually expressed in depth in inches.

The following terms not in common use are here defined:

“Stage-discharge relation,” an abbreviation for the term “relation of gage height to discharge.”

“Control,” a term used to designate the natural section or stretch of the channel or artificial structure below the gage which determines the stage-discharge relation at the gage. It should be noted that the control may not be the same section or sections at all stages.

The “point of zero flow” for a gaging station is that point on the gage—the gage height—at which water ceases to flow over the control.

## ACCURACY OF FIELD DATA AND COMPUTED RESULTS

---

The accuracy of stream-flow data depends primarily (1) on the permanence of the stage-discharge relation and (2) on the accuracy of observation of stage, measurements of flow, and interpretation of records.

The monthly means for any station may represent with high accuracy the quantity of water flowing past the gage, but the figures showing discharge per square mile and run-off in inches may be subject to errors caused by the inclusion of noncontributing districts in the measured drainage area, by lack of inclusion in the area of districts which contribute sub-surface waters to the stream, or by inability to interpret the effect of artificial regulation of the flow of the river above the station. "Second-feet per square mile" and "run-off in inches" are therefore not computed if such errors appear probable.

The table of monthly discharge gives only a general idea of the flow at the station and should not be used for other than preliminary estimates; the tables of daily discharge allow more detailed studies of the variation in flow. It should be borne in mind, however, that the observations in each succeeding year may be expected to throw new light on data previously published.

## ACKNOWLEDGMENTS

---

Valuable assistance has been rendered or records have been furnished by the United States Weather Bureau, United States Army Engineers, North Jersey District Water Supply Commission, Morris Canal and Banking Company, Newark Water Department, Jersey City Water Department, City of Trenton, Atlantic City Water Department, City of New Brunswick, City of Morristown, Borough of Pompton Lakes, Hackensack Water Company, Monmouth Consolidated Water Company, Somerset Lake and Game Club, Taylor-Wharton Iron and Steel Company, Warren Manufacturing Company, The Society for Establishing Useful Manufactures, and Jersey Central Power and Light Company.

The writer has had the advantage of the wise counsel of H. T. Critchlow, chief of the Division of Waters, in connection with establishment and maintenance of gaging stations from 1921 to date.

Since 1921 the writer has had the valuable assistance of Mr. Otto Lauterhahn, associate engineer, who has also had charge of the detail work in assembling material for this report. The following junior engineers have assisted at one time or another during the period: J. W. Bones, H. C. Barksdale, E. W. Downs, R. B. Letcher, W. R. Voght, R. E. Marsh, and Harry Barnett. The following clerk-stenographers have also assisted: Mrs. A. H. Harrison, Mrs. M. T. Sheridan, and Mrs. A. B. Savidge.

The table of analyses of surface waters appearing in this report is reprinted from United States Geological Survey Water-Supply Paper 596-E *Quality of the Surface Waters of New Jersey*. The samples for this work were collected by men engaged in the stream-gaging work.

**GAGING-STATION RECORDS**

**HACKENSACK RIVER BASIN.**

**Hackensack River at New Milford.**

LOCATION.—At pumping plant of Hackensack Water Company, New Milford, Bergen County, 3½ miles downstream from mouth of Dwars Kill.

DRAINAGE AREA.—113 square miles.

RECORDS AVAILABLE.—October 28, 1921, to September 30, 1928.

EQUIPMENT.—Vertical staff gage on right bank 30 feet above south spillway and 500 feet north of pumping station used to November 23, 1923; water-stage recorder on right bank 40 feet above south dam used after that date. Vertical staff gage in Oradell reservoir is read once daily.

CHANNEL AND CONTROL.—The two waste weirs and the sluice gates at the pumping plant forebay form the control.

EXTREMES OF DISCHARGE.—1921-1928: Maximum stage from water-stage recorder, 4.58 feet at 5:00 P. M. on September 2, 1927 (discharge, about 4,000 second-feet).

DIVERSIONS AND REGULATIONS.—Water is stored in Oradell reservoir, one mile upstream from gage, and is diverted from the stream at New Milford. Part of the table of monthly discharge has been corrected for diversion and storage.

CO-OPERATION.—Hackensack Water Company erected and maintained the staff gages and shelter for water-stage recorder and furnished the record of diversions.

*Daily discharge, in second-feet, of Hackensack River at New Milford, for the years ending September 30, 1922-1928.*

NOTE.—These tables indicate discharge over waste weirs only. Braced figures show estimated mean discharge for periods indicated. Discharge Jan. 24-31, Feb. 28, 1925, Jan. 27, 28, and June 11-17, 1927, when gage heights are missing, determined by graphic study of hydrograph, precipitation records, and records of gage heights in Oradell reservoir.

Monthly discharge of Hackensack River at New Milford, for the years ending September 30, 1922-1928.

[Drainage area, 113 square miles.]

NOTE.—Observed discharge is flow over waste weirs. No correction for storage at Oradell made prior to Jan. 1, 1923. No correction made for evaporation.

(a) Control at low water.

(b) Control at high water.

*Gaging station on Passaic River near Millington.*  
NEW JERSEY GEOLOGICAL SURVEY

PASSAIC RIVER BASIN.

Passaic River Near Millington.

LOCATION.—1903-1906 at lower highway bridge, Millington, Somerset County.  
 1921-1928 at highway bridge known as Davison Bridge, one mile upstream from Millington, 1½ miles below mouth of Black Brook, and three-fourths mile upstream from gaging station formerly maintained at Millington.  
 DRAINAGE AREA.—57 square miles for station maintained 1903-1906. 55 square miles for station maintained 1921-1928.  
 RECORDS AVAILABLE.—At Millington November 25, 1903, to July 15, 1906. Near Millington, three-fourths mile upstream, November 10, 1921, to September 30, 1928.  
 EQUIPMENT.—1903-1906: Chain gage fastened to wooden hand rail on downstream side of bridge at Millington.  
 1921 to September 1, 1923: Inclined staff gage on right bank 400 feet below Davison Bridge.  
 November 1, 1923-July 2, 1925: Inclined staff gage on right bank 200 feet below Davison Bridge.  
 July 2, 1925-September 30, 1928: Water-stage recorder on right bank 200 feet below Davison Bridge.  
 CHANNEL AND CONTROL.—1903-1906: Channel, gravel with few scattered boulders. 1921 to September 1, 1923: Channel, coarse gravel and rock; control, narrow section in channel and rocky riffle 100 feet below gage.  
 November 1, 1923-September 30, 1928: Channel, coarse gravel; a low concrete control 80 feet downstream from gage effective during low and medium stages; riffle 300 feet below gage control at high stages.  
 EXTREMES OF DISCHARGE.—1903-1906, 1922-1928: Maximum stage recorded, 7.50 feet March 8, 1904 (discharge, 2,000 second-feet); minimum discharge, 2.5 second-feet from current meter measurement October 18, 1923.

Daily discharge, in second-feet, of Passaic River near Millington, for the years ending September 30, 1922-1928.

NOTE.—Data for years ending 1903-1906 are for the station that was maintained at Millington (drainage area, 57 square miles) and are republished from United States Geological Survey Water-Supply Paper 202. Mean discharge for September, 1923, estimated by comparison with records for nearby streams.

#### Passaic River Near Chatham.

LOCATION.—At the second bridge, 1½ miles upstream from Chatham and 3 miles upstream from mouth of Canoe Brook.

DRAINAGE AREA.—101 square miles.

RECORDS AVAILABLE.—February 10, 1903, to December 31, 1911.

EQUIPMENT.—Chain gage attached to bridge.

CHANNEL.—Rocky and fairly permanent.

CO-OPERATION.—Station established and maintained by the United States Weather Bureau.

Monthly discharge of Passaic River near Chatham, for years ending September 30, 1903-1912.

NOTE.—Data republished from United States Geological Survey Water-Supply Papers 166, 202, 241, 261, 281, and 301.

### Passaic River at Paterson.

LOCATION.—At hydro-electric power plant of The Society for Establishing Useful Manufactures in Paterson, Passaic County.

DRAINAGE AREA.—785 square miles.

RECORDS AVAILABLE.—January, 1898, to September 30, 1928.

DIVERSIONS AND REGULATION.—In the monthly discharge table, correction has been made for water diverted above Paterson by Passaic Consolidated Water Company at Little Falls, Newark waterworks at Macopin Intake dam, Jersey City waterworks at Boonton, Commonwealth Water Company at Canoe Brook well field, East Orange waterworks at Canoe Brook well field, and the Morris Canal. Diversions by Passaic Consolidated Water Company, Newark, and Jersey City are measured by Venturi meters; diversions by Commonwealth Water Company and East Orange measured by piston displacement; diversion by Morris Canal estimated.

In monthly discharge table, correction has been made for storage in the Newark reservoirs at Oak Ridge, Clinton, Canistear, and Echo Lake, in the Jersey City reservoir at Boonton, in Greenwood Lake and in Wanaque reservoir. No correction was made for evaporation from the surface of the various reservoirs, which comprise about 1 per cent. of the total drainage area.

CO-OPERATION.—Base data furnished by John H. Cook, Deputy Governor, The Society for Establishing Useful Manufactures, by Passaic Consolidated Water Company, Newark waterworks, Jersey City waterworks, Commonwealth Water Company, and East Orange waterworks.

Daily discharge, in second-feet, of Passaic River at Paterson, for the years ending September 30, 1897-1928.

NOTE.--"Observed" flow is total flow at Paterson. No correction made for evaporation.

## Rockaway River at Boonton.

LOCATION.—At dam of the Jersey City Waterworks at Boonton, Morris County.

DRAINAGE AREA.—119 square miles.

RECORDS AVAILABLE.—January 1, 1906, to September 30, 1928.

EQUIPMENT.—Water-stage recorder on left bank about one-quarter mile downstream from dam. Elevation of water surface in reservoir determined by graduated rod and reference point on dam.

CHANNEL AND CONTROL.—Channel, coarse gravel and rock outcrop; right bank overflowed at high stages. Control, bar of coarse gravel. To October, 1911, the control was the crest of spillway dam; discharge through gates in dam was computed separately.

DIVERSION AND REGULATION.—Water is diverted from reservoir to Jersey City, and is measured by Venturi meter. Flow is regulated by storage in reservoir. Part of the table of monthly discharge is corrected for diversions and storage.

CO-OPERATION.—Base data, 1906-1911, furnished by Mr. John H. Cook, East Jersey Water Company; later data furnished by Department of Streets and Public Improvements, Jersey City.

*Daily discharge, in second-feet, of Rockaway River at Boonton, for the years ending September 30, 1926-1928.*

NOTE.—Tables for years ending 1906-1911 indicate flow over spillway, plus diversions, plus or minus correction for storage; in the later tables the first three columns indicate flow in river below dam only. No correction made for evaporation.

#### Whippany River at Morristown.

LOCATION.—At Morristown sewage disposal plant, three-fourths mile below center of Morristown, Morris County, and 8 miles above mouth of river.

DRAINAGE AREA.—29 square miles.

RECORDS AVAILABLE.—August 26, 1921, to September 30, 1928.

EQUIPMENT.—Vertical staff gage on left bank 150 feet above chlorination house of sewage disposal plant.

CHANNEL AND CONTROL.—Channel, sand and fine gravel; control is riffle about 50 feet below gage. Right bank is overflowed at very high stages.

EXTREME OF DISCHARGE.—1921-1928; Maximum stage determined from hydrograph, 7.30 feet at 10:00 P. M. August 26, 1928 (discharge, about 1,100 second-feet); minimum stage recorded, 0.80 foot at 5:30 P. M. October 5 and 7, 1921 (discharge, 6.3 second-feet).

CO-OPERATION.—Gage read by an employe of the Commissioner of Department of Public Works of Morristown.

Daily Discharge, in second-feet, of Whippany River at Morristown, for the years ending September 30, 1921-1928.

**Ramapo River Near Mahwah.**

LOCATION.—At concrete highway bridge one mile west of Mahwah, Bergen County, three-fourths mile below mouth of Mahwah River.

DRAINAGE AREA.—118 square miles.

RECORDS AVAILABLE.—February 10, 1903, to July 31, 1914, and from September 1, 1922, to September 30, 1928. Records from 1907 to 1914 consist of gage heights only, published by United States Weather Bureau.

EQUIPMENT.—1903-1914: Chain gage attached to hand rail on downstream side of bridge.

1922-1928: Water-stage recorder on right bank just below bridge.

CHANNEL AND CONTROL.—Channel, coarse gravel; control, gravel riffle 150 feet below bridge.

EXTREMES OF DISCHARGE.—1922-1928: Maximum stage during period from water-stage recorder, 8.23 feet for several hours on September 2, 1927 (discharge, about 2,760 second-feet); minimum stage, 1.57 feet at 9:00 A. M. September 20, 1923 (discharge, 11 second-feet).

REGULATION.—Daily distribution of flow affected by water powers at points upstream.

*Daily discharge, in second-feet, of Ramapo River near Mahwah, for years ending September 30, 1922-1928.*

NOTE.—Data for 1904-1906 republished from United States Geological Survey Water-Supply Papers 125, 166, and 202.

#### Ramapo River at Pompton Lakes.

LOCATION.—At hydro-electric plant, Borough of Pompton Lakes, Passaic County, 1½ miles above mouth of Ramapo River.

DRAINAGE AREA.—160 square miles.

RECORDS AVAILABLE.—October 29, 1921, to September 30, 1928.

EQUIPMENT.—Water-stage recorders at right end of dam and on left bank of tailrace, respectively. Prior to September 24, 1923, a staff gage in tailrace was read twice daily. Wicket-gate opening for each turbine recorded hourly from indicators on turbine governors.

CONTROLS.—For main channel, spillway of dam; for tailrace, coarse gravel 30 feet below gage.

EXTREMES OF DISCHARGE.—1921-1928: Maximum stage from water-stage recorder, 2.68 feet at 10:00 A. M. September 2, 1927 (discharge, about 7,220 second-feet; flow through turbines not included).

DIVERSIONS AND REGULATION.—Flow through turbines included in daily discharge. Record indicates flow as released by power plant. No correction made for storage in pond or for evaporation from its surface.

CO-OPERATION.—The water-stage recorders were operated by and records of wicket-gate opening were furnished by employes of Borough of Pompton Lakes to about December, 1926; after that date by the Jersey Central Power and Light Company.

Daily discharge, in second-feet, of Ramapo River at Pompton Lakes, for the years ending September 30, 1924-1928.

NOTE.—Data not corrected for storage in nor evaporation from Pompton Lakes.

### Greenwood Lake at The Glens.

LOCATION.—On Erie Railroad bridge 100 feet above dam at The Glens, Passaic County.

DRAINAGE AREA.—27 square miles.

RECORDS AVAILABLE.—June 1, 1898, to November 16, 1903, and June 1, 1907, to September 30, 1928.

EQUIPMENT.—Vertical staff gage on railroad trestle read to half-tenths once a day.

CONTROL.—The old masonry dam was replaced during the winter of 1927-28 by a concrete dam, with a spillway 120 feet long. The elevation of spillway crest of the old dam was at gage height 100.0 feet; the crest of the new spillway is at the same elevation.

EXTREMES OF STAGE.—1898-1903, 1907-1928: Maximum stage recorded, 102.37 feet several days in March, 1902 (also gage height was reported as "2 feet over gage" approximately, 104.0 feet October 9-14, 1903); minimum stage recorded, 93.25 feet several days in November, 1900.

REGULATION.—The Greenwood Lake dam was constructed to provide a storage reservoir for the water supply of the Morris Canal. The Morris Canal was taken by the State of New Jersey on March 1, 1923. Navigation was abandoned by act of the State Legislature March 13, 1924. Very little regulation of the lake was required for the canal after this date.

CO-OPERATION.—Records to about December, 1922, furnished by John H. Cook, Deputy Governor, The Society for Establishing Useful Manufactures, Paterson, N. J.; later records furnished by Morris Canal and Banking Company.

*Daily gage height, in feet, of Greenwood Lake at The Glens, for the years ending September 30, 1898-1904 and 1907-1928.*

NOTE.—Gage height May 4, 1927, estimated.

## Wanaque River at Greenwood Lake.

LOCATION.—600 feet down-stream from dam at outlet of Greenwood Lake, at The Glens, Passaic County.

DRAINAGE AREA.—27 square miles.

RECORDS AVAILABLE.—May 13, 1919, to September 30, 1928.

EQUIPMENT.—Water-stage recorder on right bank 600 feet below the dam; prior to April 1, 1926, a vertical staff gage at the same section but on the left bank was used.

CHANNEL AND CONTROL.—Channel, coarse gravel and boulders. Control is riffle of small boulders about 200 feet below gage, probably permanent.

EXTREMES OF DISCHARGE.—1919-1928: Maximum stage recorded, 3.72 feet at 5:00 P. M. April 7, 1924 (discharge, about 600 second-feet); minimum stage occurs whenever the gates at Greenwood Lake are closed and no water is passing over the spillway.

REGULATION.—Flow regulated by operation of sluice gates at the outlet of the lake. See record for Greenwood Lake at The Glens.

CO-OPERATION.—Station operated by North Jersey District Water Supply Commission.

*Daily discharge, in second-feet, of Wanaque River at Greenwood Lake, for the years ending September 30, 1919-1928.*

NOTE.—These tables indicate discharge as regulated at Greenwood Lake. No record of gage height Nov. 24, 1921, to Feb. 9, 1922, gate at dam closed and no discharge over spillway, flow consists of leakage through dam. Discharge Sept. 1-7, 12, 19, 20, 22, 24, 26, 27, 29, 1926, and July 30 to Aug. 4, 1928, when gage height record is missing, determined by graphic study of gage heights, gage height records for Greenwood Lake, and records of Wanaque River at Wanaque.

Monthly discharge, in second-feet, of Wanaque River at Greenwood Lake, for the years ending September 30, 1919-1928.

**Wanaque River at Wanaque.**

**LOCATION.**—100 feet below Erie Railroad bridge and 400 feet below highway bridge in Wanaque, Passaic County.

**DRAINAGE AREA.**—91 square miles.

**RECORDS AVAILABLE.**—December 16, 1903, to December 31, 1905; May 1, 1912, to May 1, 1915; and May 13, 1919, to September 30, 1928. Record for 1903-1905 gage heights published in United States Geological Survey Water-Supply Papers 97, 125, and 166.

**EQUIPMENT.**—1903-1905: Chain gage on highway bridge.

1912-1922: Staff gage on left bank 100 feet upstream from railroad bridge.

Since April 2, 1922: Water-stage recorder on left bank, 100 feet downstream from railroad bridge.

**CHANNEL AND CONTROL.**—Channel, sand and gravel. Control is gravel riffle about 50 feet downstream from water-stage recorder.

**EXTREMES OF DISCHARGE.**—1903-1905, 1912-1915, 1919-1928: Maximum stage 8.35 feet July 22 or 23, 1919, determined by level from high water marks (discharge, uncertain); minimum stage recorded, 0.18 foot at 5:00 P. M. October 8, 1923 (discharge, 1.4 second-feet).

**REGULATION.**—Flow regulated by operation of sluice gates at Greenwood Lake, 11 miles upstream. See record of Greenwood Lake at The Glens, for effect of this regulation.

**CO-OPERATION.**—Gage height records since May 13, 1919, furnished by North Jersey District Water Supply Commission.

NOTE.—Stage-discharge relation affected by brush lodged against piles under railroad bridge Apr. 1 to Oct. 23, 1921; correction for backwater effect based on current-meter measurements. No gage height record Dec. 1-5, 10, 17, 24, 25, 31, 1922; Jan. 1, 7, 14, 21, 28, Feb. 4, 11, 12, 18, 22, 25, Mar. 4, 1923; Oct. 4, 11, 12, 18, 25, Nov. 1-8, 1925; and Mar. 19 to Apr. 1, 1927. Stage-discharge relation affected by ice Jan. 9-17, 24-29, and Feb. 10-13, 1926. Discharge for these periods determined by graphic study of records, weather records, and records for nearby streams, especially records for Wanaque River at Greenwood Lake. Gates in Wanaque dam partly closed and filling of reservoir began Mar. 23, 1928.

Monthly discharge of Wanaque River at Wanaque, for the years ending September 30, 1913-1915 and 1919-1928.

[Drainage area, 91 square miles.]

NOTE.—These tables indicate discharge as regulated at Greenwood Lake. Gates in Wanaque dam partly closed and filling of reservoir began March 23, 1928.

## Pequannock River at Macopin Intake Dam.

LOCATION.—At Macopin intake dam of the Newark waterworks about 3 miles above Butler, Morris County.

DRAINAGE AREA.—62.7 and 63.7 square miles. In September, 1911, a small brook was permanently diverted into the Pequannock basin increasing the drainage area one square mile.

RECORDS AVAILABLE.—January 1, 1892, to September 30, 1928.

EQUIPMENT.—Water-stage recorder in gate house at left end of dam. Venturi meter measures water diverted. Staff gages in the various storage reservoirs.

CONTROL.—Spillway crest of intake dam.

DIVERSIONS AND REGULATION.—Water is diverted from stream at intake dam only. Flow above dam regulated by several reservoirs. Part of monthly discharge tables corrected for diversion and storage.

CO-OPERATION.—Gages and meter owned and operated by Bureau of Water, City of Newark, which bureau furnished the base data for these records.

Daily discharge, in second-feet, of Pequannock River at Macopin intake dam, for the years ending September 30, 1926-1928.

NOTE.—Tables through September, 1925, indicate flow corrected for storage and diversion only. "Observed" flow is flow over spillway only. No correction made for evaporation.

Saddle River at Lodi.

LOCATION.—At highway bridge, 1 mile upstream from Lodi, Bergen County, and 2¾ miles upstream from mouth of river.

DRAINAGE AREA.—55 square miles.

RECORDS AVAILABLE.—September 21, 1923, to September 30, 1928.

EQUIPMENT.—Water-stage recorder on left bank at upstream end of bridge.

CHANNEL AND CONTROL.—Channel, coarse gravel and rock. Control is at riffle 75 feet below gage.

EXTREMES OF DISCHARGE.—1923-1928: Maximum stage from water-stage recorder, 6.82 feet at noon on September 2, 1927 (discharge, about 1,630 second-feet); minimum stage, 1.49 feet at 5:30 P. M. November 22, 1923 (discharge, 5.3 second-feet).

REGULATION.—Daily distribution of flow affected by small water power plants at points upstream.

Daily discharge, in second-feet, of Saddle River at Lodi, for the years ending September 30, 1923-1928.

## ELIZABETH RIVER BASIN.

## Elizabeth River at Elizabeth.

**LOCATION.**—At dam just above the Westfield Avenue bridge in Elizabeth, Union County, and  $2\frac{1}{2}$  miles above the mouth of the river.

**DRAINAGE AREA.**—20 square miles.

**RECORDS AVAILABLE.**—October 5, 1921, to September 30, 1928.

**EQUIPMENT.**—To May 18, 1923, hook gage in stilling well on left wing wall of dam; since then, water-stage recorder on left bank 10 feet above dam.

**CHANNEL AND CONTROL.**—Control is concrete dam, crest 48.5 feet long, at gage height elevation 5.00 feet; at gage height 7.00 feet water also flows over side wall 8.8 feet long. A sluice gate, 24 inches in diameter, with invert at gage height 0.3 foot located at right end of dam. When the sluice gate is open and flowing part full, a riffle of small stones below dam becomes control.

**EXTREMES OF DISCHARGE.**—1921-1928: Maximum stage from water-stage recorder, 9.71 feet at 5:30 P. M. September 1, 1927 (discharge, about 2,640 second-feet).

**DIVERSIONS AND REGULATION.**—The Elizabethtown Water Company diverts water from the Elizabeth River above this point, at the Ursina Lake Pumping Station and through wells at its Hummock Pumping Station. Corrections for these diversions have been applied to the monthly tables.

Daily discharge, in second-feet, of Elizabeth River at Elizabeth, for the years ending September 30, 1922-1928.

NOTE.—Observed discharge is flow over dam, through sluice gate, and leakage.

RAHWAY RIVER BASIN.

Rahway River at Rahway.

LOCATION.—At Church Street bridge in Rahway, Union County, half a mile upstream from mouth of Robinsons Branch of Rahway River.

DRAINAGE AREA.—41 square miles.

RECORDS AVAILABLE.—July 10, 1908, to April 29, 1915, and October 1, 1921, to September 30, 1928. Record for 1908-1915 gage heights published in United States Geological Survey Water-Supply Paper 541.

EQUIPMENT.—Staff gage attached to tree on right bank 40 feet below bridge.

CHANNEL AND CONTROL.—Channel, fine gravel; control, head of gravel riffle about 300 feet downstream from gage.

EXTREMES OF DISCHARGE.—1908-1915, 1921-1928: Maximum stage determined from hydrograph, 6.0 feet at 2:00 p. m. August 2, 1927 (discharge, about 1,740 second-feet); minimum stage recorded, zero December 1, 1912 (discharge, uncertain).

DIVERSIONS.—The following water companies divert water from Rahway River above Rahway: Orange Water Company, South Orange waterworks (wells), Short Hills Water Company (wells), Springfield Station of Elizabethtown Water Company (wells), and Rahway waterworks. The total flow diverted is about 17 second-feet and is included in the monthly record.

Daily discharge, in second-feet, of Rahway River at Rahway, for the years ending September 30, 1922-1928.

NOTE.—Observed discharge is flow in river at gaging station. Discharge corrected for diversion includes water pumped from the river and from wells in the drainage basin.

#### Robinsons Branch of Rahway River at Goodmans.

LOCATION.—At Goodmans railroad station on Lehigh Valley Railroad,  $2\frac{3}{4}$  miles upstream from dam and pumping station of the Middlesex Water Company near Rahway, Union County, and  $4\frac{1}{2}$  miles upstream from mouth of stream.

DRAINAGE AREA.—12.7 square miles.

RECORDS AVAILABLE.—October 27, 1921, to December 31, 1924, when station was discontinued.

EQUIPMENT.—Vertical staff gage attached to tree on right bank 100 feet below highway bridge.

CHANNEL AND CONTROL.—Channel, fine gravel, banks high. Control is riffle of rocks, probably artificial, 50 feet below gage and is drowned out by backwater from reservoir at medium and high stages when reservoir is full.

EXTREMES OF DISCHARGE.—1921-1924: Maximum stage recorded 5.40 feet at 8:00 A. M. April 7, 1924 (discharge, not determined); minimum stage recorded, 0.12 foot all day August 21, 1923 (discharge, 0.9 second-foot).

REGULATION.—Swamp just above station gives natural storage.

Daily discharge, in second-feet, of Robinsons Branch of Rahway River at Goodmans, for the years ending September 30, 1922-1923.

NOTE.—Stage-discharge relation Feb. 1-July 31, 1922, affected by backwater from storage reservoir; discharge not determined. Discharge Oct. 1-7, 26-31, Nov. 1-30, Dec. 1-3, 15-19, 1922; Jan. 1-4, 21-7, Feb. 3-5, 13-16, 27, 28, Mar. 1-3, 12-18, 24, April 7, to June 7, and Sept. 2-12, 1923, when stage-discharge relation was affected by backwater from storage reservoir or by debris on control, determined by indirect method of computing daily discharge. Discharge Sept. 13-19, 1923, when gage heights are missing, determined by graphic study of gage height record, and records of nearby streams.

Monthly discharge of Robinsons Branch of Railway River at Goodmans, for the years ending September 30, 1922-1925.

NOTE.—Station discontinued December 31, 1924.

## RARITAN RIVER BASIN.

## South Branch of Raritan River Near High Bridge.

LOCATION.—One mile above High Bridge, Hunterdon County, and 4 miles above mouth of Spruce Run.

DRAINAGE AREA.—65 square miles.

RECORDS AVAILABLE.—February 24, 1919, to September 30, 1928.

EQUIPMENT.—To September 30, 1921: Reference stake 2 inches square driven into bed of stream on left bank near large pine tree one mile above High Bridge.

After September 30, 1921: Water-stage recorder just above former reference stake.

CHANNEL AND CONTROL.—Channel, very rough with many boulders. Control is a well defined riffle of rock and boulders 100 feet below gage, probably permanent.

EXTREMES OF DISCHARGE.—1919-1928: Maximum stage from water-stage recorder, 10.97 feet at 10:30 A. M. February 2, 1922 (discharge, about 3,600 second-feet); minimum stage, 4.80 feet 6:30 A. M. October 3, 1921 (discharge, 9 second-feet).

REGULATION.—Daily distribution of flow affected by small water power at points upstream.

CO-OPERATION.—Taylor-Wharton Iron and Steel Company furnished gage height record to September 30, 1921, erected shelter for water-stage recorder, and operated instrument.

*Daily discharge, in second-feet, of South Branch of Raritan River near High Bridge, for the years ending September 30, 1919-1928.*

#### South Branch of Raritan River at Stanton.

**LOCATION.**—At highway bridge near Lehigh Valley Railroad station in Stanton, Hunterdon County, one-half mile above mouth of Prescott Brook and 5 miles below mouth of Cakepoulin Creek.

**DRAINAGE AREA.**—147 square miles.

**RECORDS AVAILABLE.**—July 2, 1903, to December 31, 1906; and from July 1, 1919, to September 30, 1928. Records to March, 1904, gage heights only.

**EQUIPMENT.**—To August 17, 1925, chain gage on downstream side of bridge near left end; after that date, water-stage recorder on right bank, 5 feet below bridge.

**CHANNEL AND CONTROL.**—Channel, bed and banks, gravel. River overflows banks at high stages. Control is slight riffle about 100 feet below bridge.

**EXTREMES OF DISCHARGE.**—1903-1906 and 1919-1928: Maximum stage recorded, 10.5 feet October 9, 1903 (discharge, not determined); minimum stage from water-stage recorder, 1.76 feet at 9:00 A. M. October 1, 1925 (discharge, about 21 second-feet).

**REGULATION.**—Distribution of flow affected by small water-powers at points upstream.

Daily discharge, in second-feet, of South Branch of Raritan River at Stanton, for the years ending September 30, 1919-1928.

NOTE.—Data for 1904-1906 republished from United States Geological Survey Water-Supply Papers 125, 166, and 202.

Raritan River at Manville.\*

**LOCATION.**—At highway bridge between Manville and Finderne, Somerset County, 1¼ miles above mouth of Millstone River and 4½ miles below confluence of North and South Branches of Raritan River.

**DRAINAGE AREA.**—490 square miles.

**RECORDS AVAILABLE.**—June 27, 1903, to March 31, 1907; August 10, 1908, to April 30, 1915; and from August 19, 1921, to September 30, 1928. Record for 1903 and 1908 to 1915 gage heights only, published in Water-Supply Papers 97, 125, and 521 of the United States Geological Survey.

**EQUIPMENT.**—1903-1915: Chain gage on downstream side of right truss of highway bridge.

1921-August 15, 1923: Chain gage on downstream side of bridge near left end.

August 15, 1923-1928: Water-stage recorder on left bank 5 feet downstream from bridge.

**CHANNEL AND CONTROL.**—Channel, red sandstone on left side, sand and gravel on right. River overflows right bank at very high stages. Control, for low stages, slight riffle 500 feet below bridge, affected by vegetable growth during summer months; at high stages, the channel is probably the control.

**EXTREMES OF DISCHARGE.**—1903-1907, 1921-1928: Maximum stage recorded, 15.9 feet October 10, 1903 (discharge, about 25,000 second-feet); minimum stage from water-stage recorder, 3.24 feet at 9:00 P. M. September 19, 1925 (discharge, about 36 second-feet).

**DIVERSIONS AND REGULATION.**—The Johns-Manville Company diverts about 2 second feet from the river at a point one-fourth mile above the gage. This is not included in the records. Daily distribution of flow affected by water powers at Somerville and other points upstream.

Daily discharge, in second-feet, of Raritan River at Manville, for the years ending September 30, 1921-1928.

NOTE.—Stage-discharge relation affected by ice Dec. 22-31, 1921; Jan. 1-31, 1922; Jan. 7-21, 28-31, Feb. 5-12, 15-28, 1923; Dec. 16, 26-30, 1924; Jan. 1, to Feb. 13, Dec. 27, 1925; Jan. 6-18, 23-28, Feb. 6-8, Dec. 15-20, 1926; Jan. 9-11, 17-19, 28, 29, Dec. 22-24, 26-28, 1927; and Jan. 29 to Feb. 2, 1928. No gage height record Mar. 1, Dec. 5-7, 23, 24, 1923; Jan. 7-10, 22-31, Feb. 13-27, May 17-23, 1924; July 31, Aug. 1, Dec. 28-31, 1925; Jan. 1, 29-31, Feb. 1, 9-13, 1926. Stage-discharge relation affected by grass in channel and on control Oct. 1, to Dec. 9, 1923; July 9, to Nov. 22, 1924; June 1, to Dec. 26, 1925; Feb. 26-28, Apr. 16, to Dec. 31, 1926; Jan. 1-31, and Apr. 18, to Sept. 30, 1927. Discharge for these periods determined by graphic study of gage height record, discharge measurements, weather records, and records of nearby streams, especially the other streams in Raritan River Basin.

Monthly discharge of Raritan River at Manville, for the years ending September 30, 1904-1907 and 1921-1928.

NOTE.—Data for 1903-1907 republished from United States Geological Survey Water-Supply Papers 125, 166, 202, and 241; records were published as "at Finderne."

#### North Branch of Raritan River Near Far Hills.

**LOCATION.**—At dam of the Somerset Lake and Game Club, 2 miles north of Far Hills, Somerset County, and 2 miles upstream from mouth of Peapack Brook.

**DRAINAGE AREA.**—26 square miles.

**RECORDS AVAILABLE.**—February 15, 1922, to September 30, 1928.

**EQUIPMENT.**—To June 18, 1925, hook gage in stilling box at left end of dam.

Since June 18, 1925, water-stage recorder on left bank 75 feet above dam.

**CONTROL.**—Masonry dam with flat crest having low water notch 26 feet long with crest at elevation of gage height 1.696 feet. Remainder of spillway 137 feet long with crest at elevation of gage height 2.204 feet.

**EXTREMES OF DISCHARGE.**—1922-1928: Maximum stage estimated from hydrograph, 5.1 feet at midnight March 7, 1922 (discharge, not determined); minimum stage recorded, 1.79 feet at 9:30 A. M. August 27, 1923 (discharge, 4 second-feet).

**DIVERSIONS.**—Small turbine takes water from the pond above the dam for operation of a pump. This turbine is operating continuously and uses about 2 second-feet. The diversion is included in the following tables of daily and monthly discharge.

**CO-OPERATION.**—Shelter built on property of Somerset Lake and Game Club, F. S. Tainter, engineer.

(a) Shelter for automatic water-stage recorder.

(b) Dam forming control.

*Gaging station on North Branch of Raritan River near Far Hills.*

Daily discharge, in second-feet, of North Branch of Raritan River near Far Hills, for the years ending September 30, 1922-1928.

## North Branch of Raritan River at Milltown.

LOCATION.—At Milltown, Somerset County, 1½ miles above junction of North and South Branches of Raritan River.

DRAINAGE AREA.—190 square miles.

RECORDS AVAILABLE.—June 14, 1923, to September 30, 1928.

EQUIPMENT.—Inclined staff gage on right bank 300 feet above highway bridge at Milltown.

CHANNEL AND CONTROL.—Channel, clay and fine gravel. Control is remains of foundation of an old dam.

EXTREMES OF DISCHARGE.—1922-1928: Maximum stage, 10.0 feet (from hydrograph) at 9:00 P. M. November 3, 1927 (discharge, not determined); minimum stage recorded, 1.95 feet at 9:00 A. M. December 2, 1924 (discharge, about 22 second-feet).

REGULATION.—Slight diurnal fluctuations due to small water powers upstream.

Daily discharge, in second-feet, of North Branch of Raritan River at Milltown, for the years ending September 30, 1923-1928.

Day	June	July	Aug.	Sept.	Day	June	July	Aug.	Sept.

**Black River Near Pottersville.**

**LOCATION.**—One mile above highway bridge and former gaging station at Pottersville, Somerset County, and 8 miles above mouth of Rockaway Creek.

**DRAINAGE AREA.**—33 square miles.

**RECORDS AVAILABLE.**—June 27, 1922, to September 30, 1928, and at Pottersville one mile downstream, November 8, 1921, to June 30, 1922.

**EQUIPMENT.**—Water-stage recorder on right bank one mile above the bridge at Pottersville. Chain gage on downstream side of highway bridge at Pottersville used November 8, 1921, to June 30, 1922.

**CHANNEL AND CONTROL.**—Channel, gravel and boulders, very rough. Control is riffle of boulders just below gage; probably permanent.

**EXTREMES OF DISCHARGE.**—1921-1928: Maximum stage from water-stage recorder, 4.75 feet at 9:00 P. M. November 17, 1927 (discharge, about 1,600 second-feet); minimum stage recorded, 0.79 foot at 6:00 A. M. August 4, 1924 (discharge, 4 second-feet).

**REGULATION.**—Daily fluctuations occasionally caused by operations at small mills upstream.

*Daily discharge, in second-feet, of Black River near Pottersville, for the years ending September 30, 1922-1928.*

Millstone River at Blackwells Mills.

**LOCATION.**—At highway bridge in the village of Blackwells Mills, Somerset County, one-quarter of a mile below mouth of Middlebrush Brook,  $1\frac{3}{4}$  miles above the village of Millstone, and 5 miles above mouth of Millstone River.

**DRAINAGE AREA.**—258 square miles.

**RECORDS AVAILABLE.**—August 4, 1921, to September 30, 1928. A station was maintained at Millstone  $1\frac{3}{4}$  miles downstream from June 28, 1903, to December 31, 1904; and from June 7, 1912, to April 30, 1915 (unpublished record of gage heights only).

**EQUIPMENT.**—Vertical staff gage in two sections on downstream side of left bridge abutment used to August 27, 1928; after that date, a water-stage recorder on left bank 25 feet downstream from bridge was used.

**CHANNEL AND CONTROL.**—Channel, clay banks; river overflows banks at high stages. Control is foundation of old stone and timber dam 100 feet downstream from gage, gradually disintegrating.

**EXTREMES OF DISCHARGE.**—1921-1928: Maximum discharge about 7,000 second-feet at 11:00 P. M. October 18, 1927 (stage, 10.4 feet, estimated from hydrograph); minimum stage recorded, 0.0 all day September 16, 1923 (discharge, about 5 second-feet).

**DIVERSIONS AND REGULATION.**—The Delaware and Raritan Canal takes water from Delaware River and flows northeastward to Raritan River. It passes along the right bank of Millstone River for 15 miles above gaging station and for 5 miles below. Canal is above river at all points and loses water to river by leakage, seepage, and by discharge over spillways.

Daily discharge, in second-feet, of Millstone River at Blackwells Mills, for the years ending September 30, 1921-1928.

NOTE.—Discharge Jan. 1-21, 1922, not determined because of unreliable gage height record. No gage height record Apr. 1, 5-7, Apr. 11, to May 20, June 6, 8-15, 1922; Sept. 14, 15, 1925. Stage-discharge relation affected by ice Jan. 5-8, 26-29, Dec. 14, 15, 1924; Jan. 21-24, Dec. 26-31, 1925; Jan. 3-5, 10-13, Feb. 9-14, 1926. Indirect method of computing discharge used Oct. 26, to Dec. 31, 1923; Jan. 1-17, Oct. 12, to Dec. 31, 1924; Jan. 1, to Mar. 27, Oct. 17-24, Oct. 26, to Dec. 31, 1923; Jan. 1-17, Oct. 12, to Dec. 31, 1926; and Jan. 1, to Dec. 31, 1927; Jan. 1, to 1925; July 6, to Sept. 3, Sept. 12, to Dec. 31, 1926; and Jan. 1, to Dec. 31, 1927; Jan. 1, to Feb. 8, and Apr. 12, to Sept. 30, 1928. Discharge shown for these periods determined by graphic study of gage height records, periodic discharge measurements, weather records, and records of nearby streams.

Monthly discharge, in second-feet, of Millstone River at Blackwells Mills, for the years ending September 30, 1921-1928.

[Drainage area, 258 square miles.]

NOTE.—Because of leakage, seepage, and waste water from the Delaware and Raritan Canal, this record does not represent the natural flow from the basin.

## Green Brook at Bound Brook.

LOCATION.—Near State highway bridge at Bound Brook, Middlesex County, one-half mile above mouth.

DRAINAGE AREA.—49 square miles.

RECORDS AVAILABLE.—June 12, 1923, to September 30, 1928.

EQUIPMENT.—Vertical staff gage fastened to willow tree on left bank 300 feet below bridge.

CHANNEL AND CONTROL.—Channel, sand and fine gravel. Control is riffle of gravel 200 feet below gage; not permanent, also affected by growth of grass during the summer.

DIVERSIONS AND REGULATION.—Green Brook receives the sewage of Plainfield about 3 miles upstream. A well field of the Elizabethtown Water Company, Consolidated, is located along the stream just above the station; a well field of Middlesex Water Company and a second field of the Elizabethtown Water Company, Consolidated, are also located in the drainage area above the station.

Daily distribution of flow slightly affected by water power upstream from gage.

Monthly discharge of Green Brook at Bound Brook, for the years ending September 30, 1923-1928.

NOTE.—No correction made for Plainfield sewage nor for water diverted through the various well fields in the basin.

Lawrence Brook at Patricks Corner.

LOCATION.—Near highway bridge at Patricks Corner, Middlesex County, 3 miles southwest of Milltown, seven-eighths mile upstream from Beaver Brook dam, and 6¼ miles upstream from mouth of brook.

DRAINAGE AREA.—29 square miles.

RECORDS AVAILABLE.—June 21, 1922, to December 31, 1926, when station was abandoned because of backwater from new Farrington Dam.

EQUIPMENT.—Water-stage recorder on right bank 150 feet above highway bridge.

CHANNEL AND CONTROL.—Banks high and channel fairly straight. Control, concrete weir 5.02 feet of the crest at elevation of gage height 1.99 feet and remaining 19.95 feet at elevation of gage height 2.47 feet. Control was submerged and channel control became effective at very high stages. Prior to June, 1925, control was the sill of an old wooden dam at the site of the concrete weir.

EXTREMES OF DISCHARGE.—1922-1926: Maximum stage, from water mark, 8.70 feet at 3:00 A. M. April 7, 1924 (discharge, uncertain); minimum discharge 0.4 second-foot in August and October, 1923 (stage, 1.10 feet; stage-discharge relation was affected by grass on control).

REGULATION.—Distribution of flow affected by water power above the station.

Daily discharge, in second-feet, of Lawrence Brook at Patricks Corner, for the years ending September 30, 1922-1927.

NOTE.—No gage height record July 25-29, Oct. 14-22, Nov. 4, Dec. 19, 20, 1922, Dec. 7-9, 26, 27, 1924; May 22-31, June 1-11, Oct. 21-23, 1925; June 10, Oct. 22 and Dec. 28-31, 1926. Stage-discharge relation affected by grass, brush, or other obstruction in channel Oct. 1 to Nov. 29, 1923; Apr. 2 to Sept. 30, 1924; May 22 to June 11, 1925. Stage-discharge relation affected by ice Jan. 14, 15, 20-24, 27-31, Feb. 1-5, Dec. 25-29, 1925; Jan. 11-13, 25, 26, 29, Feb. 6, and 10-13, 1926. Discharge for these periods determined by graphic study of gage height records, discharge measurements, weather records, and records of nearby streams.

Monthly discharge of Lawrence Brook at Patricks Corner, for the years ending September 30, 1922-1927.

[Drainage area, 29 square miles.]

## NAVESINK RIVER BASIN.

## Swimming River Near Red Bank.

**LOCATION.**—At dam of Monmouth Consolidated Water Company (successors to Tintern Manor Water Company) 3 miles above the mouth of Swimming River at Red Bank, Monmouth County.

**DRAINAGE AREA.**—48 square miles.

**RECORDS AVAILABLE.**—July 28, 1922, to September 30, 1928.

**EQUIPMENT.**—Water-stage recorder on right bank 100 feet above end of dam.

**CONTROL.**—Dam of stone and concrete, with spillway 148 feet long. Crest of spillway was raised 18 inches during October, 1926. There are two 36-inch "blow-off" sluice gates at dam.

**EXTREMES OF DISCHARGE.**—1922-1928: Maximum discharge over spillway, about 2,590 second-feet (stage, 3.42 feet) at 11:30 P. M. February 25, 1926.

**DIVERSIONS AND REGULATION.**—Water diverted from dam to Newman Springs pumping station is not included in daily discharge tables for years ending September 30, 1922-1925, but is included in daily discharge after that period. The flow is slightly affected by storage in reservoir; part of monthly table corrected for storage.

**CO-OPERATION.**—Station maintained in co-operation with and diversion figures furnished by Monmouth Consolidated Water Company, successors to Tintern Manor Water Company.

*Daily discharge, in second-feet, of Swimming River near Red Bank, for the years ending September 30, 1922-1928.*

31	96		125	114		152		71		81	117	

NOTE.—Daily discharge to September 30, 1925, is flow over spillway and through sluice gates only; after that date daily discharge includes flow over spillway, water diverted to pumping station, and discharge through sluice gates. No gage height record Oct. 1-5, 1922; Jan. 17-20, 31, Feb. 1, 2, 5-13, 19-27, Apr. 23-28, May 16-27, 1923; Feb. 1-6, Apr. 5-14, 20-28, July 19-24, Oct. 5-7, 21-24, Dec. 15-25, 1925; Feb. 3-8, and May 16-21, 1926; discharge for these periods determined by graphic study of records, weather records, and records of nearby streams. Dam was partly obstructed by sand bags June 22 to Sept. 21, 1923, and Aug. 7, to Nov. 5, 1924 during these periods a variable correction, based on five discharge measurements, was applied to discharge. Discharge Oct. 13-31, 1926, and Sept. 16 to Oct. 11, 1927, when record of sluice gate opening is missing, determined by study of run-off records of Assumpink Creek at Trent, Lawrence Brook at Patricks Corner, North Branch of Rancocas Creek at Pemberton, Millstone River at Blackwells Mills.

The year	801		123	123	2.56	34.75

NOTE.—Observed discharge for 1922-1925 is flow over spillway and through sluice gates only; after October 1, 1925, observed discharge is sum of flow over spillway, water diverted to pumping station, and discharge through sluice gates. Storage correction negligible for year ending Sept. 30, 1928. No correction made for evaporation.

## MULLICA RIVER BASIN.

## Batsto River at Batsto.

LOCATION.—300 feet downstream from highway bridge at Batsto, Burlington County, and one mile upstream from confluence with Mullica River.

DRAINAGE AREA.—70 square miles.

RECORDS AVAILABLE.—October 1, 1927, to September 30, 1928.

EQUIPMENT.—Water-stage recorder on right bank 300 feet downstream from highway bridge.

CHANNEL AND CONTROL.—Channel is of sand. The control, which is 50 feet downstream from gage, is a wooden sill 6 inches wide and 12 inches high near upstream edge of concrete apron 6 feet wide. The control is affected by backwater for short periods during high tides, these periods are easily recognized from the appearance of the gage height graph.

*Daily discharge, in second-feet, of Batsto River at Batsto, for the year ending September 30, 1928.*

**ABSECON CREEK BASIN.**

**Absecon Creek at Absecon.**

**LOCATION.**—At dam of Atlantic City Water Department, one mile west of Absecon, Atlantic County, and 3 miles above mouth.

**DRAINAGE AREA.**—16.6 square miles.

**RECORDS AVAILABLE.**—December 1, 1923, to September 30, 1928.

**EQUIPMENT.**—Water-stage recorder at right end of measuring weir to measure flow over dam, through sluice gates, and leakage. Water-stage recorder in reservoir and water-stage recorder on pipe line to pumping station. The last two recorders indicate flow in pipe line.

**CONTROL.**—Wooden weir 48.5 feet long and 2.5 feet high with 2-inch plank crest, 30 feet below reservoir spillway. The weir is submerged for a few hours each day at high tide, but the periods of submergence are easily recognized from the appearance of the gage height graph.

**DIVERSIONS AND REGULATION.**—Water diverted to pumping station included in daily discharge tables. Flow is regulated by storage in the reservoir. Part of monthly discharge tables corrected for storage.

**CO-OPERATION.**—Stations installed and maintained in co-operation with Atlantic City Water Department, Mr. L. Van Gilder, Superintendent, and Mr. Frank Trumbore, Chief Engineer.

Daily discharge, in second-feet, of Absecon Creek at Absecon, for the years ending September 30, 1924-1928

NOTE.—These tables include the flow over measuring weir, through pipe line, and 0.3 second-foot diverted to duck farm. Discharge down the stream Dec. 1, 1923, to Feb. 18, 1924, while measuring weir was being erected, was computed by studying the openings of 30-inch waste gate and the reservoir gage heights. Discharge over measuring weir Apr. 3-6, 1926; Jan. 4-6, and July 8-13, 1928, estimated. Discharge through pipe line Jan. 15, 26-29, Feb. 14, Apr. 18, 25-30, May 1-4, 11, Aug. 2-9, 1924; Feb. 21 to Mar. 4, Dec. 28, 1925; Feb. 5, Oct. 7-9, 28, Dec. 3-5, 18-21, 1926; Jan. 8-25, Mar. 3-6, Apr. 9-16, May 20 to July 7, and Aug. 3-5, Oct. 8-22, Nov. 7-12, Dec. 20, 30, 31, 1927; Jan. 20-22, Mar. 17, 23, 24, 30, 31, Apr. 15-21, and Aug. 8, 1928, when one or the other of the recorders was not working properly, determined by study of gage height graphs made by the recorder that was operating and the hydrograph of flow through pipe line.

Monthly discharge of Absecon Creek at Absecon, for the years ending September 30, 1924-1928.

DELAWARE RIVER BASIN.

Delaware River at Port Jervis, N. Y.

LOCATION.—At highway bridge, Port Jervis, Orange County, 1½ miles above mouth of Noversink River and 6 miles below mouth of Mongaup River.

DRAINAGE AREA.—3,070 square miles.

RECORDS AVAILABLE.—October 12, 1904, to September 30, 1928.

EQUIPMENT.—Chain gage on downstream side of left span of bridge, and staff gage in two sections. The upper section of the staff gage is vertical and attached to downstream end of left abutment; the lower section is inclined and 30 feet downstream from bridge.

Water-stage recorder 350 feet downstream from bridge established August 13, 1928.

CHANNEL AND CONTROL.—Channel above and below gage, straight for half a mile. Banks steep. Control, boulder and gravel about half a mile below gage, occasionally shifting.

EXTREMES OF DISCHARGE.—1904-1928: \* Maximum discharge recorded, 92,700 second-feet at 8:00 A. M. March 28, 1914 (gage height, 16.0 feet); a stage of 18.5 feet was recorded at 5:00 P. M. March 7, 1923, but stage-discharge relation was affected by backwater from ice. Minimum stage recorded, 0.60 foot at 8:00 A. M. September 22 and 23, 1908 (discharge, 175 second-feet).

REGULATION.—Storage reservoirs on Lackawaxen and Mongaup Rivers above the gage for use of power cause slight diurnal fluctuation.

CO-OPERATION.—Station operated by United States Geological Survey, Albany, New York, in co-operation with State of New York.

Daily discharge, in second-feet, of Delaware River at Port Jervis, N. Y., for the years ending September 30, 1909-1928.

\* During the flood of October 10-11, 1903, a crest stage of 23.3 feet gage height was observed by Mr. Righter, city engineer of Port Jervis. This gage height corresponds to a discharge of about 155,000 second-feet.

Daily discharge, in second-feet, of Delaware River at Port Jervis, N. Y., for the years ending September 30, 1909-1928—Continued.

NOTE.—No gage height record or records unreliable Jan. 1-5, Dec. 19-31, 1909; Feb. 11-15, 1910; Sept. 4, 5, 1919; Jan. 26-29, 1922; Dec. 1-5, 25, 1923; Feb. 6-12, Sept. 21, 22, 1926; Jan. 16-20, Dec. 1-4, 7-10, 12, 13, 16-18, 1927; Jan. 1, 2, and Feb. 23-26, 1928. Stage-discharge relation affected by ice Jan. 1-21, Feb. 11-15, Dec. 7-31, 1910; Jan. 1, 16, 17, Mar. 1, 2, 1911; Jan. 13 to Mar. 13, 1912; Feb. 16-19, 1913; Jan. 14-31, Feb. 15 to Mar. 23, Dec. 14-31, 1914; Jan. 1-7, Dec. 13-17, 1915; Feb. 11-21, 1918; Jan. 20 to Mar. 14, Dec. 10-31, 1917; Jan. 1 to Feb. 19, 1918; Dec. 21-31, 1919; Jan. 1 to Mar. 11, 1920; Jan. 4, 13-31, Feb. 1, 2, 17-20, Dec. 13-31, 1922; Jan. 1, 2, 16-31, Feb. 1-28, Mar. 1-24, 1923; Feb. 2 to Mar. 8, Dec. 10, 1924; Jan. 1 to Feb. 19, 1925; Jan. 12-15, Feb. 2 to Mar. 1, Dec. 7-31, 1926; and Jan. 1-28, 1927. Daily discharge when shown for these periods, determined by graphic study of gage height record, observers' notes, discharge measurements, weather records, and records of other stations in the Delaware River basin.

Daily discharge data republished from United States Geological Survey Water-Supply Papers 261, 281, 301, 321, 351, 381, 401, 451, 471, 501, 521, 541, 561, and 581; later data furnished by A. W. Harrington, district engineer, U. S. Geological Survey, Albany, N. Y.

Monthly discharge of Delaware River at Port Jervis, N. Y., for the years ending  
September 30, 1905-1928.

[Drainage area, 3,070 square miles.]

NOTE.—Data republished from United States Geological Survey Water-Supply Papers 241, 261, 281, 301, 321, 351, 381, 401, 431, 451, 471, 501, 521, 541, 561, and 581; and later data furnished by A. W. Harrington, district engineer, United States Geological Survey, Albany, N. Y.

Delaware River at Belvidere.

LOCATION.—At Belvidere, Warren County, just below mouth of Pequest River.

DRAINAGE AREA.—4,540 square miles.

RECORDS AVAILABLE.—October 27, 1922, to September 30, 1928.

EQUIPMENT.—Inclined staff gage on left bank bolted to downstream side of storm sewer outlet at foot of Second Street, Belvidere.

CHANNEL AND CONTROL.—Channel is heavy gravel and boulders. Control is ledge and boulders about three-fourths mile below gage, known as little Foul Rift.

EXTREMES OF DISCHARGE.—1922-1928: Maximum stage determined by levels from high water mark, 19.3 feet at 2:00 p. m. October 1, 1924 (discharge, about 118,000 second-feet); minimum stage recorded, 2.45 feet in July and August, 1923 (discharge, 895 second-feet).

Daily discharge, in second-feet, of Delaware River at Belvidere, for the years ending September 30, 1923-1928.

NOTE.—Stage-discharge relation affected by ice Dec. 26-29, 1924; Jan. 7-10, 12-15, 22-25, 28-31, Dec. 26-30, 1925; Jan. 8-14, Feb. 9-14, 1926; Jan. 7-12, 15-17, and 23, 1927. No gage height record Dec. 8, 9, 1922; Sept. 13, 1925; Jan. 25, Mar. 7, Apr. 4, June 6, 13, 20, 27, 28, Sept. 26, Oct. 24, 31, Nov. 5, 14, 21, 28, Dec. 5, 12, 1926; Jan. 24-29, Feb. 6, 20, July 31, Aug. 9, and 16, 1927. Discharge for these periods determined by graphic study of gage heights, weather records, and records of gage heights of other stations in Delaware River Basin.

Monthly discharge of Delaware River at Belvidere, for the years ending September 30, 1923-1928.

## Delaware River at Riegelsville.

LOCATION.—At suspension bridge between Riegelsville, Warren County, New Jersey, and Riegelsville, Bucks County, Pennsylvania, 600 feet above mouth of Musconetcong River and 9 miles below Lehigh River.

DRAINAGE AREA.—6,190 square miles.

RECORDS AVAILABLE.—July 3, 1906, to September 30, 1928.

EQUIPMENT.—1906 to November 14, 1914: Chain gage attached to upstream side of bridge.

November 14, 1914-1917: Staff gage in three sections on left bank (New Jersey side) at upstream side of bridge.

1917-February 28, 1924: Low section (to gage height, 7.0 feet) staff gage and chain gage at higher stages.

1924-1928: Water-stage recorder on left bank (New Jersey side) 20 feet above bridge.

CHANNEL AND CONTROL.—Control, rock outcrop and large boulders; practically permanent.

EXTREMES OF DISCHARGE.—1906-1928: Maximum stage recorded, 25 feet March 28, 1913 (discharge, about 144,000 second-feet); minimum stage recorded, 1.55 feet at 8:00 A. M. September 20, 1908 (discharge, 870 second-feet). Not including flow in canal.

The flood of October 10-11, 1903, reached a stage of 35.9 feet, determined by levels from three good flood marks. Maximum discharge during this flood has been estimated 275,000 second-feet at Riegelsville from observations made at Lambertville.

DIVERSIONS AND REGULATION.—The Delaware Division of the Pennsylvania Canal diverts about 230 second-feet from Lehigh River near its mouth from about the last of March to the middle of December each year. Daily distribution of flow affected slightly by water powers upstream.

Daily discharge, in second-feet, of Delaware River at Riegelsville, for the years ending September 30, 1909-1928.

NOTE.—These tables indicate flow in river only; do not include diversion by Pennsylvania Canal. Stage-discharge relations affected by ice Dec. 26-31, 1909; Jan. 1-9, 1910; Jan. 2-4, 13-21, 1920; and Feb. 20-22, 1923. No gage height record Jan. 10-21, 1910; Feb. 5-7, 22, 1918; Dec. 12, 15-21, 24-27, 1919; Jan. 5-9, Feb. 8-11, Oct. 15-17, Nov. 24-28, Dec. 2-10, 15-19, 1920; Jan. 26, 27, Feb. 20, Mar. 28, 1921; Dec. 17-20, 1923; Jan. 6-9, 22-24, 27, Feb. 10-29, June 17-20, 1924; Apr. 7-10, June 3, 1925; Feb. 11-17, and Sept. 6-9, 1927. Discharge for these periods determined by graphic study of gage height record, weather records, and records of flow at other stations on the Delaware River. Staff gage on railroad bridge at mouth of Musconetcong River read March 14-22 and July 25, 1920.

Data for years ending Sept. 30, 1909-1921, republished from United States Geological Survey Water-Supply Papers 261, 281, 301, 321, 351, 381, 401, 431, 451, 471, 501, and 521.

Monthly discharge of Delaware River at Riegelsville, for the years ending September 30, 1906-1928.

[Drainage area, 6,190 square miles.]

NOTE.—The last three columns of each table include diversion down Pennsylvania Canal as follows: 280 second-feet, July 1 to Dec. 14, 1906, Apr. 8 to Dec. 12, 1907, Apr. 6 to Dec. 9, 1908; 270 second-feet, Mar. 19 to Dec. 19, 1909, Mar. 10 to Dec. 8, 1910, Mar. 10 to Dec. 7, 1911, Mar. 25 to Dec. 8, 1912; 250 second-feet, Apr. 15 to Dec. 15, 1913, Mar. 23 to 28, Apr. 5 to Dec. 10, 1914; Mar. 8 to Dec. 12, 1915, Mar. 15 to September 30, 1916, 1917; and 230 second-feet, Oct. 1 to Dec. 20, 1916, Mar. 17 to Dec. 9, 1917, Mar. 16 to Dec. 6, 1918, Mar. 17 to Dec. 5, 1919, Mar. 23 to Dec. 13, 1920, Mar. 2 to Dec. 9, 1921, Mar. 4 to Dec. 13, 1922, Feb. 27 to Dec. 8, 1923, Mar. 7 to Dec. 5, 1924, Mar. 24 to Nov. 28, 1925, Mar. 11 to Nov. 27, 1926, Mar. 28 to Nov. 19, 1927, and Mar. 26 to Sept. 30, 1928. The diversion figures were determined from measurements of discharge in the canal.

Data for years ending Sept. 30, 1906-1921, republished from United States Geological Survey Water-Supply Papers 241, 261, 281, 301, 321, 351, 361, 401, 431, 451, 471, 501, and 521.

### Delaware River at Trenton.

**LOCATION.**—On the Calhoun Street bridge, Trenton, Mercer County, 1 mile above Pennsylvania Railroad bridge and half a mile above mouth of Assunpink Creek.

**DRAINAGE AREA.**—6,800 square miles.

**RECORDS AVAILABLE.**—February 24, 1913, to September 30, 1928.

**EQUIPMENT.**—Chain gage on downstream side of bridge about 100 feet from left abutment.

**EXTREMES OF DISCHARGE.**—1913-1928: Maximum stage, 13.3 feet during night of March 28-29, 1913 (discharge, about 160,000 second-feet); minimum stage recorded, -0.40 foot several times in October and November, 1914 (discharge, 1,240 second-feet). Not including flow in canals.

**DIVERSION AND REGULATION.**—The Delaware division of the Pennsylvania Canal diverts from 20 to 53 second-feet by the gaging station from about March 31, to December 15, each year. The Delaware and Raritan Canal feeder diverts 130 to 160 second-feet from the first of March to the last of December each year. The Trenton Power canal diverts from 210 to 250 second-feet daily.

**CO-OPERATION.**—Gage readings furnished by United States Weather Bureau.

*Gaging station on Delaware River at Trenton.*  
NEW JERSEY GEOLOGICAL SURVEY

Daily discharge, in second-feet, of Delaware River at Trenton, for the years ending September 30, 1913-1928.

NOTE.—The diversions were: Pennsylvania Canal, 53 second-feet, Apr. 15 to Dec. 15, 1913; Mar. 23-28, Apr. 5 to Dec. 10, 1914; Mar. 8 to Dec. 12, 1915; Mar. 15 to Dec. 20, 1916; Mar. 17 to Dec. 9, 1917; Mar. 16 to Dec. 6, 1918; Mar. 17 to Dec. 5, 1919; Mar. 23 to Dec. 13, 1920; Mar. 2 to Dec. 9, 1921; Mar. 4 to Dec. 13, 1922; Feb. 27 to Dec. 8, 1923; Mar. 7 to Sept. 30, 1924; 50 second-feet, Oct. 1 to Dec. 5, 1924; Mar. 24 to Nov. 28, 1925; Mar. 11 to Nov. 27, 1926; Mar. 23 to Sept. 30, 1927; and 20 second-feet, Oct. 1 to Nov. 10, 1927; Mar. 26 to Sept. 30, 1928.

The Delaware and Raritan Canal feeder, 160 second-feet, from Mar. 1 to Dec. 31 of each year to Sept. 30, 1924; 140 second-feet, Oct. 1 to Nov. 30, 1924, Apr. 1 to Dec. 20, 1925; 130 second-feet, Oct. 1 to Dec. 31, 1925; 40 second-feet, Jan. 1-15, 1926; 130 second-feet, Mar. 1 to Nov. 30, 1926, Mar. 1 to Dec. 31, 1927, and Mar. 1 to Sept. 30, 1928.

Trenton Power Canal, 210 second-feet daily, Feb. 24, 1913, to Sept. 30, 1924; 250 second-feet, daily, Sept. 30, 1924, to Sept. 30, 1928.

Diversion figures are based on occasional discharge measurements.

## Flat Brook Near Flatbrookville.

LOCATION.—1 mile above Flatbrookville, Sussex County, and 1½ miles above mouth of river.

DEAINAGE AREA.—65 square miles.

RECORDS AVAILABLE.—July 8, 1923, to September 30, 1928.

EQUIPMENT.—To January 6, 1926, an inclined staff gage on right bank; since then, a water-stage recorder at same site.

CHANNEL AND CONTROL.—Channel, fine to coarse gravel. Control is bar of heavy gravel about 50 feet below gage.

EXTREMES OF DISCHARGE.—1923-1928: Maximum stage, from high water mark, 7.1 feet on April 7, 1924, and February 11, 1925 (discharge, about 2,350 second feet); minimum stage recorded, 1.35 feet at 7:00 A. M. September 6 and 7, 1923 (discharge, 4 second-feet).

REGULATION.—Daily distribution of flow affected slightly by water power 3 miles above the gage.

Daily discharge, in second-feet, of Flat Brook near Flatbrookville, for the years ending September 30, 1923-1928.

NOTE.--Stage-discharge relation was affected by ice Dec. 30, 31, 1921; Jan. 1-6, 11, 23, 24, 26-28, Feb. 2, 1922; Jan. 13, 14, 31, Feb. 5-8, 12, 15-25, 1923; Jan. 15-16, Feb. 14-17, 24, 25, Dec. 25, 26, 1924; Jan. 1 to Feb. 10, Dec. 25-31, 1925; Jan. 9-17, 28-30, Feb. 6-12, Dec. 4-9, 16-20, 23, 24, 27, 28, 1926; Jan. 2, 3, 7-13, 15-18, 26-29, Feb. 20-21, 1927; and Jan. 1-5, 1928. No gage height record Sept. 16-29, Dec. 13-17, 1922; Feb. 15-23, May 12-22, Dec. 16-21, 25-27, 30, 1923; Mar. 14-26, Oct. 5-11, 20-23, 1924; Apr. 15-21, 1925; Mar. 9-18, 1926; Mar. 9-14, 1927; and Feb. 27-29, 1928. Stage-discharge relation affected by stones placed on control July 9, to Oct. 12, 1926. Discharge for these periods determined by graphic study of gage height record, discharge measurements, weather records, and records of nearby streams.

Monthly discharge of Paulins Kill at Blairstown, for the years ending September 30 1922-1928.

Pequest River at Pequest

LOCATION.—At Pequest Station, Warren County, on Lehigh and Hudson River Railroad, 100 feet above railroad bridge, 300 feet below mouth of Furnace Brook, and  $6\frac{3}{4}$  miles above mouth of Pequest River.

DRAINAGE AREA.—108 square miles.

RECORDS AVAILABLE.—November 7, 1921, to September 30, 1928.

EQUIPMENT.—To June 22, 1926, vertical staff gage attached to face of former bridge abutment on right bank 100 feet above railroad bridge; since then, water-stage recorder 10 feet downstream from staff gage.

CHANNEL AND CONTROL.—Channel, fine gravel; control, riffle of large stones probably remains of old diversion dam 50 feet below gage.

EXTREMES OF DISCHARGE.—1921-1928; Maximum stage from water-stage recorder, 3.04 feet at 10:00 A. M. August 27, 1928 (discharge, 753 second-feet); minimum stage recorded, 0.31 foot on September 20 and 21, 1924 and August 7, 1926 (discharge, 16 second-feet).

REGULATION.—Daily distribution of flow slightly affected by water power.

(a) Shelter for automatic water-stage recorder.

(b) Gaging bridge.

Daily discharge, in second-feet, of Pequest River at Pequest, for the years ending September 30, 1922-1928.

Beaver Brook Near Belvidere.

LOCATION.—500 feet upstream from mouth of brook in Pequest River and 2 miles east of Belvidere, Warren County.

DRAINAGE AREA.—36 square miles.

RECORDS AVAILABLE.—May 24, 1922, to September 30, 1928.

EQUIPMENT.—Water-stage recorder on right bank 500 feet above mouth of brook.

CHANNEL AND CONTROL.—Channel, gravel and ledge rock. Control is solid rock out-crop 25 feet downstream from gage, improved by having rough cavities filled with concrete.

EXTREMES OF DISCHARGE.—1922-1928: Maximum stage from water-stage recorder, 3.92 feet at 6:00 A. M. July 15, 1928 (discharge, about 826 second-feet); minimum stage recorded, 1.21 feet September 4, 5, and October 18, 1923 (discharge, 3.1 second-feet).

REGULATION.—Daily distribution of flow often irregular because of operation of small grist mills some distance upstream.

*Gaging station on Beaver Brook near Belvidere, shelter for automatic water-stage recorder, natural control shown in foreground.*

NEW JERSEY GEOLOGICAL SURVEY

Daily discharge, in second-feet, of Beaver Brook near Belvidere, for the years ending September 30, 1922-1923.

NOTE.—Stage-discharge relation affected by ice Feb. 6-10, 18-28, 1923; Jan. 5-8, 20-24, 26-29, Feb. 9, 21-25, Dec. 12, 13, 15, 20-24, 26-30, 1924; Jan. 4 to Mar. 4, 1925; Jan. 10-17, 23-30, Feb. 6, 9-12, Dec. 18-20, 27, 1926; Jan. 2, 8-13, 16-18, 1924; Jan. 2, 3, 21, 22, 26-31 and Feb. 1-3, 1925. No gage height record Oct. 7, Nov. 11-18, 1923; Feb. 3, Mar. 17, 23, Apr. 6, May 12-25, Sept. 22-24, Nov. 17-21, 30, Dec. 1-4, 1924; Feb. 9, 16-23, Mar. 15-20, 28, Apr. 5-22, 26, 27, Sept. 6, 13-22, Oct. 19, to Nov. 11, Dec. 19-31, 1925; Jan. 1-3, Dec. 4-10, 1926. The daily discharge for these periods determined by graphic study of gage heights, discharge measurements, weather records, and records of nearby streams. Indirect method of determining discharge used Oct. 24, to Dec. 3, 1926; Jan. 15 to Feb. 3, Feb. 28 to Mar. 15, and Nov. 4 to Dec. 14, 1927.

Monthly discharge of Beaver Brook near Belvidere, for the years ending September 30, 1922-1928.

Musconetcong River Near Hackettstown.

LOCATION.—500 feet above Delaware, Lackawanna and Western Railroad bridge, half a mile below Saxton Falls dam of Morris Canal, and 3 miles above Hackettstown, Warren County.

DRAINAGE AREA.—70 square miles.

RECORDS AVAILABLE.—September 24, 1921, to September 30, 1928.

EQUIPMENT.—To August 21, 1923, inclined staff gage on left bank 500 feet upstream from railroad bridge; since then, water-stage recorder at same site.

CHANNEL AND CONTROL.—Channel, coarse gravel; control, coarse gravel riffle 75 feet below gage, probably permanent.

EXTREMES OF DISCHARGE.—1921-1928: Maximum stage from water-stage recorder, 5.12 feet at 1:00 P. M. February 12, 1925 (discharge, about 1,080 second-feet); minimum stage recorded, 1.02 feet at 5:00 P. M. July 8, 1927 (discharge, about 2 second-feet).

DIVERSION AND REGULATION.—Lake Hopatcong, about 9 miles upstream from this station, was the source of supply for the Morris Canal. There was a complex interchange of water between the canal and the river from the lake down to Saxton Falls dam, where the canal finally left the river and extended westward to the Delaware River at Phillipsburg. The canal extended eastward to Wharton and thence down Passaic Valley to Newark. The records at this station represent the amount of water left in Musconetcong River by the Morris Canal. Navigation was abandoned in the canal by act of the State Legislature March 13, 1924, after which date there was no diversion.

Distribution of flow was affected by operation of sluice-gates at Lake Hopatcong and possibly at other structures of the former Morris Canal. Monthly discharge tables for years ending 1926 to 1928 corrected for storage in Lake Hopatcong.

Daily discharge, in second-feet, of Musconetcong River near Hackettstown, for the years ending September 30, 1921-1928.

NOTE.—These tables do not include water diverted by Morris Canal; canal abandoned Mar. 13, 1924. Stage-discharge relation affected by ice Dec. 22, 29-31, 1921; Jan. 1-17, 22-31, Feb. 1, 1922. Jan. 6, to Mar. 1, 1923; Jan. 22, 23, Feb. 20-24, Dec. 15, 16, 21-30, 1924; Jan. 1, to Feb. 11, Dec. 26-31, 1925; Jan. 10-14, 24-30, Feb. 4-18, 23-25, Dec. 4-7, 16-21, 1926; Jan. 2, 8, 16-21, 27, 28, 1927; Jan. 2-5, 27-31, and Feb. 1-3, 1928. No gage height record Mar. 7, 31, July 11-25, Sept. 13-22, 1923; Feb. 25, to Mar. 4, May 1, 2, 7-10, 1924; Feb. 25, to Mar. 4, Sept. 5-12, 1925; Jan. 3-7, and 9-14, 1927. Discharge for these periods determined by graphic study of gage heights, discharge measurements, weather records, and records of nearby streams, especially of Musconetcong River near Bloomsbury.

Monthly discharge of Musconetcong River near Hackettstown, for the years ending September 30, 1922-1928.

[Drainage area, 70 square miles.]

NOTE.—These tables do not include diversion through the Morris Canal. The later tables are corrected for storage in Lake Hopatcong. No correction made for evaporation.

#### Musconetcong River Near Bloomsbury.

LOCATION.—At highway bridge  $1\frac{1}{2}$  miles above Bloomsbury, Hunterdon County, and 9 miles above the mouth of river.

DRAINAGE AREA.—143 square miles.

RECORDS AVAILABLE.—July 4, 1903, to March 31, 1907; and from July 26, 1921, to September 30, 1928.

EQUIPMENT.—To April 12, 1904: Vertical staff gage attached to right abutment of bridge near downstream end.

April 12, 1904-1907: Chain gage on bridge.

1921 to 1928: Water-stage recorder on right bank just below the bridge.

Comparison between the ratings for the two periods indicates that the datum of the present gage is about 0.03 foot lower than datum used 1903-1907.

CHANNEL AND CONTROL.—Channel, gravel. Control, gravel riffle about 150 feet below gage. Banks are overflowed at high stages.

EXTREMES OF DISCHARGE.—1903-1907, 1921-1928: Maximum stage recorded, 8.0 feet (1903-1907 datum) on October 10 or 11, 1903 (discharge, not determined); minimum discharge, 21 second-feet on November 19, 1921.

DIVERSIONS AND REGULATION.—Lake Hopatcong at head of Musconetcong River was source of supply for Morris Canal. Through the canal water passed westward to Delaware River at Phillipsburg and eastward down Passaic Valley to Newark. Water left in Musconetcong River by canal was measured by gaging station near Hackettstown. Navigation in canal was abandoned by act of the State Legislature March 13, 1924, when diversion was discontinued.

Distribution of flow was affected by several small water powers above the station and by operation of sluice gates at Lake Hopatcong. Monthly discharge tables for 1926 to 1928 corrected for storage in Lake Hopatcong.

CO-OPERATION.—Station established in co-operation with the Warren Manufacturing Company.

Daily discharge, in second-feet, of Musconetcong River near Bloomsbury, for the years ending September 30, 1921-1928.

NOTE.—No allowance made for diversion by Morris Canal from headwaters of river. Tables for years ending 1926-1928 corrected for storage in Lake Hopatcong. No correction made for evaporation. Data for 1903-1906 republished from United States Geological Survey Water-Supply Papers 166, 202, and 241.

#### Assunpink Creek at Trenton.

**LOCATION.**—At Chambers Street bridge in Trenton, Mercer County, 1½ miles above mouth of river.

**DRAINAGE AREA.**—89 square miles.

**RECORDS AVAILABLE.**—July 20, 1923, to September 30, 1928.

**EQUIPMENT.**—Water-stage recorder in standard shelter on left bank 50 feet above Chambers Street bridge.

**CHANNEL AND CONTROL.**—Channel, sand and gravel. Control is bar of gravel and large stone placed 40 feet below gage.

**EXTREMES OF DISCHARGE.**—1923-1928: Maximum stage from water-stage recorder, 7.85 feet at 4:00 A. M. April 7, 1924 (discharge, 2,400 second-feet); minimum stage recorded, 1.69 feet at 6:00 A. M. June 30, 1927 (discharge, 2 second-feet).

**REGULATION.**—Large daily fluctuations in flow at low stages due to water powers upstream.

(a) *Artificial control under bridge.*

(b) *Shelter for automatic water-stage recorder just above bridge.*

*Gaging station on the Musconetcong River outlet of Lake Hopatcong.*

North Branch of Rancocas Creek at Pemberton.

LOCATION.—Near highway bridge at Pemberton, Burlington County, 11 miles above confluence with South Branch.

DRAINAGE AREA.—111 square miles.

RECORDS AVAILABLE.—September 15, 1921, to September 30, 1928.

EQUIPMENT.—To June 9, 1923, vertical staff gage on left bank 800 feet downstream from highway bridge; since then, water-stage recorder at same site.

CHANNEL AND CONTROL.—Sand, shifting. River overflows right bank at high stages. This station has a channel control.

REGULATION.—Distribution of flow greatly affected by operation of grist mill at Pemberton and regulation of its pond.

Daily discharge, in second-feet, of North Branch of Rancocas Creek at Pemberton, for the years ending September 30, 1924-1928.

Day	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.

## PERIOD OF RECORDS AT GAGING STATIONS

NOTE.—Dash after a date indicates that station was being maintained September 30, 1928. Period after a date indicates discontinuance.

### Hackensack River Basin.

Hackensack River at New Milford, 1921—

### Passaic River Basin.

Passaic River at Millington, 1903-1906; 1921—

Passaic River near Chatham, 1902-1911.

Passaic River at Paterson, 1898—

Rockaway River at Boonton, 1903-4; 1906—

Whippany River at Morristown, 1921—

Pompton River:

Ramapo River near Mahwah, 1903-1906; 1908; 1922—

Ramapo River at Pompton Lakes, 1921—

Greenwood Lake at The Glens, 1898-1904; 1907—

Wanaque River at Greenwood Lake, 1919—

Wanaque River at Wanaque, 1903-1905; 1912-1915; 1919—

Pequannock River at Macopin intake dam, 1892—

Saddle River at Lodi, 1923—

### Elizabeth River Basin.

Elizabeth River at Elizabeth, 1921—

### Rahway River Basin.

Rahway River at Rahway, 1908-1915; 1921—

Robinsons Branch of Rahway River at Goodmans, 1921-1924.

### Raritan River Basin.

Raritan River, South Branch (head of Raritan River), near High Bridge, 1919—

Raritan River, South Branch, at Stanton, 1903-1906; 1919—

Raritan River at Manville, 1903-1907; 1908-1915; 1921—

North Branch of Raritan River near Far Hills, 1922—

North Branch of Raritan River at Milltown, 1923—

Black River (head of Lamington River) near Pottersville, 1921—

Millstone River at Blackwells Mills, 1921—

Bound Brook:

Green Brook at Bound Brook, 1923—

Lawrence Brook at Patrick Corner, 1922-1926.

### Navesink River Basin.

Navesink River:

Swimming River near Red Bank, 1922—

### Absecon River Basin.

Absecon River at Absecon, 1923—

**Great Egg Harbor River Basin.**

Great Egg Harbor River at Folsom, 1925—

**Delaware River Basin.**

Delaware River at Port Jervis, N. Y., 1904—

Delaware River at Belvidere, 1922—

Delaware River at Riegelsville, 1906—

Delaware River at Trenton, 1913—

Flat Brook near Flatbrookville, 1923—

ANALYSES OF SURFACE WATERS<sup>a</sup>

The following table gives analyses of typical samples of surface waters of New Jersey. The usual constituents are reported in parts per million. In addition to the determined constituents of the dissolved mineral matter the table gives the calculated hardness, and for some samples, the quantity of suspended matter and the total iron. Nearly all the analyses were made by C. S. Howard, Chemist, United States Geological Survey; exceptions are indicated in footnotes.

The analyses are arranged in the order in which the drainage basins and streams are given in the part of this report on gaging-station records. The following list of streams in alphabetic order shows the number of the analyses in the table for each stream:

Absecon Creek .....	73-76	Paulins Kill .....	97-100
Assunpink Creek .....	111-114	Peguannock River .....	21
Batsto River .....	71	Pequest River .....	101-103
Beaver Brook .....	104-106	Rahway River .....	28, 29
Black River .....	50-52	Ramapo River .....	14-18
Coopers Creek .....	121	Rancocas Creek:	
Delaware River .....	79-92	North Branch .....	115-117
Elizabeth River .....	25-27	South Branch .....	119
Flat Brook .....	93-96	Raritan River .....	38-41
Great Egg Harbor River .....	77	North Branch .....	42-49
Green Brook .....	58-61	South Branch .....	31-37
Hackensack River .....	1	Robinsons Branch (of Rahway	
Haynes Creek .....	120	River) .....	30
Lawrence Brook .....	62-65	Rockaway River .....	9, 10
Maurice River .....	78	Saddle River .....	22-24
Millstone River .....	53-56	Stony Brook .....	57
Mount Misery Branch .....	118	Swimming River .....	66-68
Mullica River .....	69-70	Wading River .....	72
Musconetcong River .....	107-110	Wanaque River .....	19, 20
Passaic River .....	2-8	Whippany River .....	11-13

<sup>a</sup>Republished from Water-Supply Paper 596-E, 1927, of the United States Geological Survey.

\* Analyzed by Margaret D. Foster, U. S. Geological Survey.  
 † Above reservoir.  
 ‡ Below reservoir.  
 § Includes equivalent of a small amount of carbonate.  
 ¶ Minimum, maximum, and mean analyses from U. S. Geological Survey Water-Supply Paper 236, p. 60.  
 †† Discharge measured at Ringsville.  
 \*\* Determined.  
 ††† Calculated.  
 ††† Sum of dissolved constituents.

## INDEX

A.	PAGE
Absecon Creek at Absecon	187-191
analyses of water of	296
Accuracy of data and results, de- grees of	5
Acknowledgments	6
Analyses of surface waters	293-297
Assunpink Creek at Trenton	280-285
analyses of water of	297
Atlantic City Water Depart- ment, co-operation by	187
B.	
Batsto River near Batsto	186-187
analysis of water of	295
Beaver Brook near Belvidere	262-268
analysis of water of	297
Belvidere, Beaver Brook near	262-268
Delaware River at	211-215
Black River near Pottersville	163-168
analyses of water of	295
Blackwells Mills, Millstone River at	168-173
Blairstown, Paulins Kill at	250-256
Bloomsbury, Musconetcong River near	274-280
Boonton, Jersey City waterworks at, diversion	46
Rockaway River at	46-53
Bound Brook, Green Brook at	174-175
Bureau of Water, Newark, co- operation by	102
