Subject: Make Clean Energy a Priority for 2015

Aug 1, 2015

EMP comments EMP Comments

Dear EMP comments Comments,

The Energy Master Plan will help shape New Jersey's energy future in 2015 and beyond. As the president of the Board of Public Utilities you have the power to help make dirty energy a thing of the past. I urge you to make clean energy a priority for the 2015 EMP.

The BPU has the opportunity to ensure that all New Jersey residents have the benefit of clean, safe and affordable energy. Dirty fossil fuels are putting New Jerseyans at risk of disastrous explosions, dire health consequences and dangerous climate impacts. The EMP is your chance to set a safe, 21st century energy strategy New Jersey.

The Board of Public Utilities should establish the following goals for the 2015 EMP:

- 1.) Eliminate NJ's reliance on coal by retiring PSEG Hudson and Mercer
- 2.) Ensure New Jersey's compliance with the EPA Clean Power Plan
- 3.) Establish binding energy savings targets
- 4.) Stop the expansion of natural gas pipelines throughout the state
- 5.) Stop the transportation of crude oil into and out of New Jersey

Sincerely,

Emil Scheller

Fort Lee, NJ 07024-5401

Dear EMP comments Comments,

The Energy Master Plan will help shape New Jersey's energy future in 2015 and beyond. As the president of the Board of Public Utilities you have the power to help make dirty energy a thing of the past. I urge you to make clean energy a priority for the 2015 EMP.

The BPU has the opportunity to ensure that all New Jersey residents have the benefit of clean, safe and affordable energy. Dirty fossil fuels are putting New Jerseyans at risk of disastrous explosions, dire health consequences and dangerous climate impacts. The EMP is your chance to set a safe, 21st century energy strategy New Jersey.

I agree with the Sierra Club's goals. We live in one of the most densely-populated and polluted states, let's lead the way. Also, green alternatives are not just good for human kind but also for business and jobs.

The Board of Public Utilities should establish the following goals for the 2015 EMP:

- 1.) Eliminate NJ's reliance on coal by retiring PSEG Hudson and Mercer
- 2.) Ensure New Jersey's compliance with the EPA Clean Power Plan
- 3.) Establish binding energy savings targets
- 4.) Stop the expansion of natural gas pipelines throughout the state
- 5.) Stop the transportation of crude oil into and out of New Jersey

Sincerely,

Suzanne Curry

How ignorant of the powers that be in NJ- especially the Governor.

Twenty of the largest companies in the world- Apple, Goggle, Walmart, Cisco, Intel all have billions of dollars invested in solar and wind.

Why? Because they use a lot of energy and don't feel like paying a premium for it. You want jobs- for Gods sake. Atlantic City is upside down. You think it would look better with a 20% discount on electric provided by wind from offshore project that is already financed. Don't go down in history as a bunch of stooges. Screw the governor and start looking out for the people of the state.

Sincerely,

Robert Marsh

Subject: Make Clean Energy a Priority for 2015

Aug 5, 2015

EMP comments EMP Comments

Dear EMP comments Comments,

The Energy Master Plan will help shape New Jersey's energy future in 2015 and beyond. As the president of the Board of Public Utilities you have the power to help make dirty energy a thing of the past. I urge you to make clean energy a priority for the 2015 EMP.

The BPU has the opportunity to ensure that all New Jersey residents have the benefit of clean, safe and affordable energy. Dirty fossil fuels are putting New Jerseyans at risk of disastrous explosions, dire health consequences and dangerous climate impacts. The EMP is your chance to set a safe, 21st century energy strategy New Jersey.

The Board of Public Utilities should establish the following goals for the 2015 EMP:

- 1.) Eliminate NJ's reliance on coal by retiring PSEG Hudson and Mercer
- 2.) Ensure New Jersey's compliance with the EPA Clean Power Plan
- 3.) Establish binding energy savings targets
- 4.) Stop the expansion of natural gas pipelines throughout the state
- 5.) Stop the transportation of crude oil into and out of New Jersey

Sincerely,

Barry Chiorello

Subject: Comments Regarding 2011 EMP Update

Categories: Blue Category

To NJ BPU

My name is Greg Gorman- Conservation Chair for NJ Sierra Club Chapter and a member of St, Mary's Franciscan Response (Pompton Lake). Below are my recommendations for your consideration regarding NJ Energy Master Plan update.

Thank you

Greg Gorman

Hamburg, NJ 07419-1701

Recommendation 1: Establish Performance-Based Ratemaking Policy. Federal Government champions the use of Performance Based Service Contracts. This approach focuses on developing strategic performance metrics and directly relating contract payment to performance against these metrics. By establishing binding energy savings targets and tying performance directly to revenues, this approach encourages innovation, promotes capital investment, and allows equitable application for all rate payers.

Recommendation 2: Adopt the goal of "50% reduction in oil consumption by 2030". This goal is achievable with emphasis on "healthy communities", "Complete Streets", electric vehicles including local trucks and buses, shifting freight and passengers to electric rail, and encouraging "buy local" programs. A focus on reducing commuter vehicles on the roads will accommodate promote our State's business environment by improving freight traffic and reduce our tax burden by averting need for major road construction projects.

Recommendation 3: Eliminate NJ's reliance on coal by retiring PSEG Hudson and Mercer Both plants adversely impact the climate, environment, and health.

Recommendation 4: Ensure New Jersey's compliance with the EPA Clean Power Plan and strive to exceed those goals. "An analysis by Scientific American suggests that the president is right: the Clean Power Plan alone is not enough. The plan, which goes into effect in 2022 and aims to reduce U.S. greenhouse gas emissions by 32 percent by 2030, will lock in an energy transition that is already underway" (See http://www.scientificamerican.com/article/how-far-does-obama-s-clean-power-plan-go-in-slowing-climate-change/?WT.mc_id=SA_ENGYSUS_20150806). We need to do better.

Recommendation 5: Stop the expansion of natural gas pipelines and generation facilities. throughout the state, low natural gas prices resulted from the massive production in the Marcellus Shale; however, the prices will

soon rise as “sweet spots” become exhausted, well production rates drop, and coal to gas conversions peak. It is best to capitalize on the trend of rapidly falling prices and rapidly rising efficiency of renewable energy resources.

Recommendation 6: Stop the transportation of crude oil into and out of New Jersey, Focus on the capitalizing the vehicle electrification trend.

Recommendation 7: In regards to resiliency planning and renewable energy goals, consider the application and integration of micro-hydro power and water pipe power stems. (See <http://www.lucidenergy.com/lucid-pipe/>).

Recommendation 8: Develop offshore wind!

Recommendation 9: Work with PJM and Electric Distributors to modernize the grid including IT-enabled energy systems to integrate renewables, smart appliances, and electricity-based HVAC technologies,

August 10, 2015

Dear Board of Public Utility Commissioners,

I am delighted to present some of the issues I have been aware of with the NJ Clean Energy Program.

I want to briefly preface my remarks here with a few facts. I have been involved with the DSM (demand side management) industry since its beginning, since 1975. With the advancements of manufacturers developing more efficient products, end users are able to reduce and eliminate wasteful energy.

For all the 40 years I have worked in this industry, for other companies, as my own company and as consultant to several utilities – I have developed as an expert in the work I do – focusing on Efficient Lighting and LED lighting, and I am a Certified Energy Auditor since 1984 from the California Energy Commission.

The only reason I am pointing this out is in parallel with some parts of the goals of the NJEMP – job creation.

Currently the NJ Clean Energy Program – which carries out the work of the NJEMP, has Direct Install contractors – which are the only companies allowed to participate in the Programs, as vendors for materials and contractors for installation. The DI's participate in all measures and practices.

Even though my company has the subcontractors, have the expertise and ability and have the customer base, I am not allowed to participate fully in the NJ Clean Energy program – except in the most limited basis.

I inquire as to the diversity, the inclusion of women and minority firms and small businesses – especially when expertise in this exact industry exists.

I appreciate the time to bring this to your attention.

NOTE: As I just looked at the NJ Clean Energy updated website, I was happy to see a line stating there may be an increase in the DI contractor list come September 2015. How do I find where applications / RFP's will be available ??

Thank You.

Subject: Energy Master Plan Update

To Whom It May Concern,

I was very disappointed when the Governor, despite his supposed reputation to the contrary, broke his word given in 2009 to be a strong advocate for clean energy, a green economy and environmental responsibility when his administration adopted the 2011 Energy Master Plan.

However, now that the BPU is considering updating that plan, you can correct those mistakes. Please do everything in your power to advance the following policies now and remember even if you're in the minority on the BPU today, your opinion expressed strongly today can help build for a better tomorrow:

- * Accelerate NJ's transition to a safe, clean energy economy using existing technology through aggressive but attainable goals -- 30% increase in efficiency by 2030 and relying on 100% fossil free energy production by 2050
- * Just say no to the construction and expansion of new oil and gas industries and facilities in NJ
- * Incentivize clean energy technology making the Garden State a hotbed for manufacturing, research and development, installation and maintenance of green technologies to create sustainable jobs
- * Reduce existing equity and environmental justice issues by ensuring vulnerable communities especially benefit as we transition from a dirty to a clean economy.

Thank you for considering my comments.

To Whom It May Concern,

I was very disappointed when the Governor, despite his supposed reputation to the contrary, broke his word given in 2009 to be a strong advocate for clean energy, a green economy and environmental responsibility when his administration adopted the 2011 Energy Master Plan.

However, now that the BPU is considering updating that plan, you can correct those mistakes. Please do everything in your power to advance the following policies now and remember even if you're in the minority on the BPU today, your opinion expressed strongly today can help build for a better tomorrow:

- * Accelerate NJ's transition to a safe, clean energy economy using existing technology through aggressive but attainable goals -- 30% increase in efficiency by 2030 and relying on 100% fossil free energy production by 2050
- * Just say no to the construction and expansion of new oil and gas industries and facilities in NJ
- * Incentivize clean energy technology making the Garden State a hotbed for manufacturing, research and development, installation and maintenance of green technologies to create sustainable jobs
- * Reduce existing equity and environmental justice issues by ensuring vulnerable communities especially benefit as we transition from a dirty to a clean economy.
