Subject: Energy Master Plan Update

To Whom It May Concern,

I was very disappointed when the Governor, despite his supposed reputation to the contrary, broke his word given in 2009 to be a strong advocate for clean energy, a green economy and environmental responsibility when his administration adopted the 2011 Energy Master Plan.

However, now that the BPU is considering updating that plan, you can correct those mistakes. Please do everything in your power to advance the following policies now and remember even if you're in the minority on the BPU today, your opinion expressed strongly today can help build for a better tomorrow:

- * Accelerate NJ's transition to a safe, clean energy economy using existing technology through aggressive but attainable goals -- 30% increase in efficiency by 2030 and relying on 100% fossil free energy production by 2050
- * Just say no to the construction and expansion of new oil and gas industries and facilities in NJ
- * Incentivize clean energy technology making the Garden State a hotbed for manufacturing, research and development, installation and maintenance of green technologies to create sustainable jobs
- * Reduce existing equity and environmental justice issues by ensuring vulnerable communities especially benefit as we transition from a dirty to a clean economy.

Please do everything in your power to advance the following policies now and remember even if you're in the minority on the BPU today, your opinion expressed strongly today can help build for a better tomorrow:

- * Accelerate NJ's transition to a safe, clean energy economy using existing technology through aggressive but attainable goals -- 30% increase in efficiency by 2030 and relying on 100% fossil free energy production by 2050
- * Just say no to the construction and expansion of new oil and gas industries and facilities in NJ
- * Incentivize clean energy technology making the Garden State a hotbed for manufacturing, research and development, installation and maintenance of green technologies to create sustainable jobs
- * Reduce existing equity and environmental justice issues by ensuring vulnerable communities especially benefit as we transition from a dirty to a clean economy.

Subject: Energy Master Plan Update

To Whom It May Concern,

I was very disappointed when the Governor, despite his supposed reputation to the contrary, broke his word given in 2009 to be a strong advocate for clean energy, a green economy and environmental responsibility when his administration adopted the 2011 Energy Master Plan.

However, now that the BPU is considering updating that plan, you can correct those mistakes. Please do everything in your power to advance the following policies now and remember even if you're in the minority on the BPU today, your opinion expressed strongly today can help build for a better tomorrow:

- * Accelerate NJ's transition to a safe, clean energy economy using existing technology through aggressive but attainable goals -- 30% increase in efficiency by 2030 and relying on 100% fossil free energy production by 2050

Subject: Energy Master Plan Update

To Whom It May Concern,

I was very disappointed when the Governor, despite his supposed reputation to the contrary, broke his word given in 2009 to be a strong advocate for clean energy, a green economy and environmental responsibility when his administration adopted the 2011 Energy Master Plan.

However, now that the BPU is considering updating that plan, you can correct those mistakes. Please do everything in your power to advance the following policies now and remember even if you're in the minority on the BPU today, your opinion expressed strongly today can help build for a better tomorrow:

- * Accelerate NJ's transition to a safe, clean energy economy using existing technology through aggressive but attainable goals -- 30% increase in efficiency by 2030 and relying on 100% fossil free energy production by 2050
- * Just say no to the construction and expansion of new oil and gas industries and facilities in NJ
- * Incentivize clean energy technology making the Garden State a hotbed for manufacturing, research and development, installation and maintenance of green technologies to create sustainable jobs
- * Reduce existing equity and environmental justice issues by ensuring vulnerable communities especially benefit as we transition from a dirty to a clean economy.
