1. Conservation and Efficiency are key components and should be foremost in the Plan.
2. Rebates and tax credits for solar and wind power should be authorized for at least a ten year period.
3. There should be no new nuclear power plants built in any where in New Jersey due to the many drawbacks of this dangerous and out-dated technology.
 - a. They are too expensive and eat up resources better used for conservation and renewal energy.
 - b. Uranium is not a renewal fuel and will run out just as oil will.
 - c. Nuclear power generates carbon while mining, processing, enrichment, treatment and disposal methods are utilized.
 - d. Nuclear waste is forever – we are leaving a terrible legacy for the future. It will take vast resources to manage waste.
 - e. Using nuclear power is not ethical.
4. Oyster Creek must be decommissioned due to its decrepit condition.
5. There should be no off-shore drilling in New Jersey. Our sea coast is a state treasure and any risk is unacceptable.
6. Systems for ride-sharing should be put in place.
7. Anywhere there is a cell tower, a wind mill should be built.
