Some suggestions to enact change:

*staggered work schedules so peak hours for use are no longer "peak" for everyone.*

**money back for less energy use based on household size.**

*money back for solar/wind energy for businesses and homes.*

**power all gov't buildings with solar or wind. set an example!**

*integrate energy conservation and practices into public school curricula.*

**free oil lamps!**

I'm realistic and I know we can really make a change if the government acts truly for the good of the people!

Thanks for listening...
