Common Name: **ACRYLIC ACID**

Synonyms: Propene Acid; Ethylene Carboxylic Acid; Vinylformic Acid

Chemical Name: 2-Propenoic Acid

Date: October 2007  
Revision: March 2017

**Description and Use**

Acrylic Acid is a clear liquid with a sharp and irritating odor. It is used in the manufacture of acrylic resins, plastic products, leather treatments, and paper coating.

- **ODOR THRESHOLD**=0.06 ppm to 1 ppm
- Odor thresholds vary greatly. Do not rely on odor alone to determine potentially hazardous exposures.

**Reasons for Citation**

- **Acrylic Acid** is on the Right to Know Hazardous Substance List because it is cited by ACGIH, DOT, NIOSH, DEP, IARC, NFPA and EPA.
- This chemical is on the Special Health Hazard Substance List.

**FIRST AID**

**Eye Contact**

- Immediately flush with large amounts of water for at least 30 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while flushing. Seek medical attention immediately.

**Skin Contact**

- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of water. Seek medical attention.

**Inhalation**

- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.

**EMERGENCY NUMBERS**

Poison Control: 1-800-222-1222  
CHEMTREC: 1-800-424-9300  
NJDEP Hotline: 1-877-927-6337  
National Response Center: 1-800-424-8802

CORROSIVE

REACTIVE AND COMBUSTIBLE

MAY POLYMERIZE EXPLOSIVELY

POISONOUS GASES ARE PRODUCED IN FIRE

CONTAINERS MAY EXPLODE IN FIRE

Hazard Rating Key: 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- **Acrylic Acid** can affect you when inhaled and may be absorbed through the skin.
- Contact can severely irritate and burn the skin and eyes with possible eye damage.
- Inhaling Acrylic Acid can irritate the nose, throat and lungs.
- Acrylic Acid may cause a skin allergy.
- Long term exposure may affect the kidneys and lungs.

**Workplace Exposure Limits**

NIOSH: The recommended airborne exposure limit (REL) is 2 ppm averaged over a 10-hour workshift.

ACGIH: The threshold limit value (TLV) is 2 ppm averaged over an 8-hour workshift.
**Determining Your Exposure**

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK Program website (http://nj.gov/health/workplacehealthandsafety/right-to-know/) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act, the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) requires private employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

**Health Hazard Information**

**Acute Health Effects**
The following acute (short-term) health effects may occur immediately or shortly after exposure to **Acrylic Acid**:

- **Acrylic Acid** can irritate the skin causing a rash or burning feeling on contact.
- **Acrylic Acid** can severely irritate and burn the eyes with possible eye damage.
- **Inhaling Acrylic Acid** can irritate the nose, throat and lungs.

**Chronic Health Effects**
The following chronic (long-term) health effects can occur at some time after exposure to **Acrylic Acid** and can last for months or years:

**Cancer Hazard**
- While **Acrylic Acid** has been tested, it is not classifiable as to its potential to cause cancer.

**Reproductive Hazard**
- According to the information presently available to the New Jersey Department of Health, **Acrylic Acid** has been tested and has not been shown to affect reproduction.

**Other Effects**
- **Acrylic Acid** may cause a skin allergy. If allergy develops, very low future exposure can cause itching and a skin rash.
- Long term exposure may affect the kidneys and lungs.

**Medical**

**Medical Testing**
For frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that:

- Lung function tests

If symptoms develop or overexposure is suspected, the following are recommended:

- Evaluation by a qualified allergist can help diagnose skin allergy.
- Kidney function tests

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

**Mixed Exposures**
- Because smoking can cause heart disease, lung cancer, emphysema, and other respiratory problems, it may worsen respiratory conditions caused by chemical exposure. Even if you have smoked for a long time, stopping now will reduce your risk of developing health problems.

**Workplace Controls and Practices**
Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at [www.cdc.gov/niosh/topics/ctrlbanding/](http://www.cdc.gov/niosh/topics/ctrlbanding/).

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
ACRYLIC ACID

- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing
- Avoid skin contact with Acrylic Acid. Wear personal protective equipment made from material which cannot be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing materials for your operation.
- Safety equipment manufacturers recommend Butyl or Neoprene for gloves and DuPont Tychem®, CPF-2, SL, CPF-4, Responder®, TK or F as protective materials for clothing.
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection
- Wear indirect-vent, impact and splash resistant goggles when working with liquids.
- Wear a face shield along with goggles when working with corrosive, highly irritating or toxic substances.

Respiratory Protection

Improper use of respirators is dangerous. Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- Where the potential exists for exposure over 2 ppm, use a NIOSH approved full facepiece respirator with an organic vapor cartridge. Increased protection is obtained from full facepiece powered-air purifying respirators.
- Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect Acrylic Acid, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
- Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefilters or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
- Where the potential exists for exposure over 20 ppm, use a NIOSH approved supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode.

Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Acrylic Acid is a COMBUSTIBLE LIQUID.
- Use dry chemical, CO₂, water spray or alcohol-resistant foam as extinguishing agents.
- POISONOUS GASES ARE PRODUCED IN FIRE.
- CONTAINERS MAY EXPLODE IN FIRE.
- Use water spray to keep fire-exposed containers cool.
- Acrylic Acid may ignite combustibles (wood, paper and oil).
- Vapor is heavier than air and may travel a distance to cause a fire or explosion far from the source.
- Vapors may travel to a source of ignition and flash back.

Spills and Emergencies

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Acrylic Acid is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers.
- DO NOT wash into sewer.
- Ventilate and wash area after clean-up is complete.
- Keep Acrylic Acid out of confined spaces, such as sewers, because of the possibility of an explosion.
- It may be necessary to contain and dispose of Acrylic Acid as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.
**Handling and Storage**

Prior to working with **Acrylic Acid** you should be trained on its proper handling and storage.

- **Acrylic Acid** reacts with PURE NITROGEN; OXIDIZING AGENTS (such as PERCHLORATES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE); STRONG ACIDS (such as HYDROCHLORIC, SULFURIC and NITRIC); and STRONG BASES (such as SODIUM HYDROXIDE and POTASSIUM HYDROXIDE).
- **Acrylic Acid** may polymerize explosively on contact with AMINES; AMMONIA; CHLOROSULFONIC ACID; PEROXIDES; and OLEUM or when exposed to HEAT or DIRECT SUNLIGHT.
- Store in tightly closed, dark containers in a cool, well-ventilated area away from HEAT, SUNLIGHT and METALS.
- Metal containers involving the transfer of **Acrylic Acid** should be grounded and bonded.
- Use only non-sparking tools and equipment, especially when opening and closing containers of **Acrylic Acid**.
- Sources of ignition, such as smoking and open flames, are prohibited where **Acrylic Acid** is used, handled, or stored in a manner that could create a potential fire or explosion hazard.
- Do not refrigerate or freeze **Acrylic Acid**.
- **Acrylic Acid** is a dangerous explosion hazard unless it is stored with an inhibitor (a chemical which stops an unwanted chemical reaction).

**Occupational Health Information Resources**

The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values are intended to provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database maintained by federal EPA. The database contains information on human health effects that may result from exposure to various chemicals in the environment.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOHS is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

PIH is a DOT designation for chemicals which are Poison Inhalation Hazards.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Hydrogen), at the same temperature and pressure.

The vapor pressure is a measure of how readily a liquid or a solid mixes with air at its surface. A higher vapor pressure indicates a higher concentration of the substance in air and therefore increases the likelihood of breathing it in.
Common Name: **ACRYLIC ACID**

Synonyms: Propene Acid; Ethylene Carboxylic Acid; Vinylformic Acid

CAS No: 79-10-7

Molecular Formula: C₃H₄O₂

RTK Substance No: 0023

Description: Clear liquid with a sharp and irritating odor

### SPILL/LEAKS

- **Isolation Distance:**
  - Small Spill - 60 meters (200 feet)
  - Large Spill - 500 meters (1,600 feet)

Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. Do not wash into sewer.

### PHYSICAL PROPERTIES

- **Odor Threshold:** 0.06 ppm to 1 ppm
- **Flash Point:** 124°F (51°C)
- **LEL:** 2.0%
- **UEL:** 8.0%
- **Vapor Density:** 2.5 (air = 1)
- **Relative Density:** 1.05 (water = 1)
- **Vapor Pressure:** 3 mm Hg at 68°F (20°C)
- **Water Solubility:** Miscible
- **Boiling Point:** 286°F (141°C)

### EXPOSURE LIMITS

- **OSHA:** N/A
- **NIOSH:** 2 ppm, 10-hr TWA
- **ACGIH:** 2 ppm, 8-hr TWA
- **IDLH LEVEL:** No information
- **PAC LEVELS:** PAC-1 = 1.5 ppm; PAC-2 = 46 ppm; PAC-3 = 180 ppm

### PROTECTIVE EQUIPMENT

- **Gloves:** Butyl, Neoprene
- **Coveralls:** DuPont Tychem® CPF-2, SL, CPF-4, Responder®, TK or F
- **Boots:** Butyl, Neoprene
- **Respirator:** >2 ppm - Full facepiece APR with OV cartridges >20 ppm - Pressure demand supplied-air

### HEALTH EFFECTS

- **Eyes:** Irritation and burns
- **Skin:** Irritation, burns and rash
- **Acute:** Nose, throat and lung irritation
- **Chronic:** Skin allergy with rash and itching

### FIRST AID AND DECONTAMINATION

Remove the person from exposure. Flush eyes with large amounts of water for at least 30 minutes. Remove contact lenses if worn. Seek medical attention immediately. Quickly remove contaminated clothing and wash contaminated skin with large amounts of water. Seek medical attention. Begin artificial respiration if breathing has stopped and CPR if necessary. Transfer to a medical facility.
