Common Name: BENZO(a)PYRENE

Synonyms: 3,4-Benzopyrene; B[a]P
Chemical Name: Benzo[a]pyrene
Date: October 2007   Revision: April 2017

Description and Use
Benzo(a)pyrene is a pale yellow, crystalline solid or powder with a faint aromatic odor. In its pure form it is used as a laboratory reagent. It also forms as a gaseous by-product when certain carbon substances burn, such as coal tar chemicals, and is found in cigarette smoke.

Reasons for Citation
- Benzo(a)pyrene is on the Right to Know Hazardous Substance List because it is cited by OSHA, ACGIH, DOT, NIOSH, NTP, DEP, IARC, and EPA.
- This chemical is on the Special Health Hazard Substance List.

SEE GLOSSARY ON PAGE 5.

FIRST AID

Eye Contact
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

Skin Contact
- Remove contaminated clothing. Wash contaminated skin with soap and water.

Inhalation
- Remove the person from exposure.
- Transfer promptly to a medical facility.

EMERGENCY NUMBERS
Poison Control: 1-800-222-1222
CHEMTREC: 1-800-424-9300
NJDEP Hotline: 1-877-927-6337
National Response Center: 1-800-424-8802

Poisonous gases are produced in fire.

Hazard Rating Key: 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- Benzo(a)pyrene can affect you when inhaled and by passing through the skin.
- Benzo(a)pyrene is a CARCINOGEN. HANDLE WITH EXTREME CAUTION.
- Benzo(a)pyrene may damage the developing fetus.
- Contact can irritate and burn the eyes.
- Benzo(a)pyrene can irritate the skin causing a rash or burning feeling on contact.
- Repeated exposure can cause thickening and darkening of the skin.
- Except in laboratories, Benzo(a)pyrene is usually found mixed with other “coal tar pitch” chemicals.
- For more information, consult the Right to Know Hazardous Substance Fact Sheets on COAL TAR PITCH, CREOSOTE, CHRYSENE, and ANTHRACENE.

Workplace Exposure Limits

OSHA: The legal airborne permissible exposure limit (PEL) is 0.2 mg/m³ (Coal Tar Pitch Volatiles – as the Benzene soluble fraction) averaged over an 8-hour workshift.

NIOSH: The recommended airborne exposure limit (REL) is 0.1 mg/m³ (Coal Tar Pitch Volatiles – as the Cyclohexane-extractable fraction) averaged over a 10-hour workshift.

ACGIH: The threshold limit value (TLV) is 0.2 mg/m³ (Coal Tar Pitch Volatiles – as the Benzene soluble aerosol) averaged over an 8-hour workshift.

- Benzo(a)pyrene is a CARCINOGEN in humans. There may be no safe level of exposure to a carcinogen, so all contact should be reduced to the lowest possible level.
- The above exposure limits are for air levels only. When skin contact also occurs, you may be overexposed, even though air levels are less than the limits listed above.
The following chronic (long-term) health effects can occur at some time after exposure to Benzo(a)pyrene and can last for months or years:

**Cancer Hazard**
- Benzo(a)pyrene is a CARCINOGEN in humans. There is evidence that it causes skin and lung cancer in humans and has been shown to cause lung, bladder, liver, kidney, throat, stomach, and skin cancer in animals.
- Many scientists believe there is no safe level of exposure to a carcinogen.

**Determining Your Exposure**
- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health and Senior Services Hazardous Substance Fact Sheet, available on the RTK Program website (http://nj.gov/health/workplacehealthandsafety/right-to-know/) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act, the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) requires private employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

**Health Hazard Information**

**Acute Health Effects**
The following acute (short-term) health effects may occur immediately or shortly after exposure to Benzo(a)pyrene:

- Contact can irritate and burn the eyes.
- Benzo(a)pyrene can irritate the skin causing a rash or burning feeling on contact. Exposure to a combination of sunlight and this chemical can increase these effects.

**Chronic Health Effects**
The following chronic (long-term) health effects can occur at some time after exposure to Benzo(a)pyrene and can last for months or years:

**Medical**

**Reproductive Hazard**
- Benzo(a)pyrene may damage the developing fetus.
- There is evidence that Benzo(a)pyrene can damage the male (testes) and female (ovaries) reproductive systems.

**Other Effects**
- Repeated exposure can cause thickening and darkening of the skin and warts.

**Mixed Exposures**
- Sunlight may cause a rash to develop in people exposed to Benzo(a)pyrene and increases the risk of skin cancer.
- Tobacco smoke also contains Benzo(a)pyrene. Smoking may increase the risk of lung cancer with exposure to Benzo(a)pyrene.

**Workplace Controls and Practices**

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at www.cdc.gov/niosh/topics/ctrlbanding/.

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.
In addition, the following may be useful or required:

- Use a Class I, Type B, biological safety hood when working with Benzo(a)pyrene in a laboratory.
- Use a vacuum or a wet method to reduce dust during clean-up. DO NOT DRY SWEEP.
- Use a high efficiency particulate air (HEPA) filter when vacuuming. Do not use a standard shop vacuum.

---

### Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

**Gloves and Clothing**

- Avoid skin contact with Benzo(a)pyrene. Wear personal protective equipment made from material which cannot be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- Safety equipment manufacturers recommend DuPont Tychem® C3, TF, and Responder® as protective materials for clothing (Hydrocarbon, Aromatic Polynuclear).
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

**Eye Protection**

- Wear eye protection with side shields or goggles.
- Do not wear contact lenses when working with this substance.

**Respiratory Protection**

*Improper use of respirators is dangerous.* Respirators should only be used if the employer has a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- Where the potential exists for exposure over 0.1 mg/m³, use a NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode.
- Exposure to 80 mg/m³ (as Coal Tar Pitch Volatiles) is immediately dangerous to life and health. If the possibility of exposure above 80 mg/m³ (as Coal Tar Pitch Volatiles) exists, use a NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode equipped with an emergency escape air cylinder.

---

### Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Benzo(a)pyrene may burn, but does not readily ignite.
- Use dry chemical, CO₂, water spray or foam as extinguishing agents.
- POISONOUS GASES ARE PRODUCED IN FIRE.

### Spills and Emergencies

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Benzo(a)pyrene is spilled, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Moisten spilled material first to reduce dust or use a HEPA-filter vacuum for clean-up.
- Ventilate and wash area after clean-up is complete.
- It may be necessary to contain and dispose of Benzo(a)pyrene as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP), Nuclear Regulatory Commission (NRC) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

### Handling and Storage

Prior to working with Benzo(a)pyrene you should be trained on its proper handling and storage.

- A regulated, marked area should be established where Benzo(a)pyrene is handled, used, or stored.
- Benzo(a)pyrene reacts with OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE).
- Store in tightly closed containers in a cool, well-ventilated area.
- Sources of ignition, such as smoking and open flames, are prohibited where Benzo(a)pyrene is used, handled, or stored in a manner that could create a potential fire or explosion hazard.
**Occupational Health Information Resources**

The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values are intended to provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database maintained by federal EPA. The database contains information on human health effects that may result from exposure to various chemicals in the environment.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

PIH is a DOT designation for chemicals which are Poison Inhalation Hazards.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Hydrogen), at the same temperature and pressure.

The vapor pressure is a measure of how readily a liquid or a solid mixes with air at its surface. A higher vapor pressure indicates a higher concentration of the substance in air and therefore increases the likelihood of breathing it in.
Common Name: BENZO(a)PYRENE

Synonyms: 3,4-Benzo.pyrene; B[a]P
CAS No: 50-32-8
Molecular Formula: C_{20}H_{12}
RTK Substance No: 0207
Description: Pale yellow, crystalline solid or powder

DOT#: UN 3077
ERG Guide #: 171
Hazard Class: 9
(Miscellaneous Hazardous Materials)

SPILL/LEAKS

Isolation Distance: 50 meters (150 feet)
Moisten spilled material first or use a HEPA-filter vacuum for clean-up.
Toxic to aquatic organisms.

PHYSICAL PROPERTIES

Odor Threshold: Faint aromatic odor
Flash Point: No information
Specific Gravity: 1.35
Vapor Density: 8.7 (air = 1)
Vapor Pressure: 5.49 X 10^9 mm Hg at 77°F (25°C)
Water Solubility: Insoluble
Boiling Point: 590° - 594°F (310° - 312°C)
Melting Point: 347° - 354 F (175° - 179°C)

EXPOSURE LIMITS

OSHA: 0.2 mg/m³, 8-hr TWA
(as Benzene soluble fraction)
NIOSH: 0.1 mg/m³, 10-hr TWA
(as Cyclohexane-extractable fraction)
ACGIH: 0.2 mg/m³, 8-hr TWA
(as Benzene soluble aerosol)
IDLH LEVEL: 80 mg/m³
(All above as Coal Tar Pitch Volatiles)
PAC LEVELS:
- PAC-1 = 0.6 mg/m³
- PAC-2 = 120 mg/m³
- PAC-3 = 700 mg/m³

PROTECTIVE EQUIPMENT

Gloves: Ansell Barrier, Polyvinyl Alcohol, Viton
Coveralls: DuPont Tychem® C3, TF, Responder®
(All >8-hr permeation time)
Boots: No information
Respirator: >0.1 mg/m³ - Pressure demand supplied-air
>80 mg/m³ – Pressure demand SCBA

HEALTH EFFECTS

Eyes: Irritation and burns
Skin: Irritation, rash and burning feeling
Chronic: Cancer (skin and lung) in humans. May affect the developing fetus. Thickening and darkening of the skin and warts.

FIRST AID AND DECONTAMINATION

Remove the person from exposure.
Flush eyes with large amounts of water for at least 15 minutes. Remove contact lenses if worn.
Remove contaminated clothing and wash contaminated skin with soap and water.
Transfer to a medical facility.
