Common Name: **ETHYLENE GLYCOL**

Synonyms: 1,2-Dihydroxyethane; Ethylene Alcohol

Chemical Name: 1,2-Ethanediol

Date: July 2012  Revision: September 2016

**Description and Use**

Ethylene Glycol is a clear, colorless, thick liquid. It is used as an antifreeze and in coolants, detergents, paints, lacquers, pharmaceuticals, adhesives and cosmetics.

- **ODOR THRESHOLD = 62.5 ppm**
- Odor thresholds vary greatly. Do not rely on odor alone to determine potentially hazardous exposures.

**Reasons for Citation**

- Ethylene Glycol is on the Right to Know Hazardous Substance List because it is cited by ACGIH, DOT, NIOSH, DEP, NFPA and EPA.
- This chemical is on the Special Health Hazard Substance List.

SEE GLOSSARY ON PAGE 5.

**FIRST AID**

**Eye Contact**

- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

**Skin Contact**

- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water.

**Inhalation**

- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.

**EMERGENCY NUMBERS**

Poison Control: 1-800-222-1222
CHEMTREC: 1-800-424-9300
NJDEP Hotline: 1-877-927-6337
National Response Center: 1-800-424-8802

COMBUSTIBLE POISONOUS GASES ARE PRODUCED IN FIRE

TERATOGEN

**Workplace Exposure Limits**

ACGIH: The threshold limit value (TLV) is **39 ppm** (as an aerosol), which should not be exceeded at any time.

- The above exposure limit is for air levels only. When skin contact also occurs, you may be overexposed, even though air levels are less than the limits listed above.
- Ethylene Glycol may be a teratogen in humans. All contact with this chemical should be reduced to the lowest possible level.
Determining Your Exposure

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK Program website (http://nj.gov/health/workplacehealthandsafety/right-to-know/) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act, the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) requires private employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

Health Hazard Information

Acute Health Effects
The following acute (short-term) health effects may occur immediately or shortly after exposure to Ethylene Glycol:

- Contact can irritate the skin and eyes.
- Inhaling Ethylene Glycol can irritate the nose and throat.
- Ethylene Glycol can cause nausea, vomiting, weakness and abdominal pain.
- Higher exposure can cause headache, dizziness, slurred speech, convulsions, loss of coordination, and even coma.

Chronic Health Effects
The following chronic (long-term) health effects can occur at some time after exposure to Ethylene Glycol and can last for months or years:

Cancer Hazard
- While Ethylene Glycol has been tested, it is not classifiable as to its potential to cause cancer.

Reproductive Hazard
- Ethylene Glycol may be a TERATOGEN in humans since it is a teratogen in animals.
- Ethylene Glycol may damage the developing fetus.

Other Effects
- Repeated or very high exposure may cause kidney damage and affect the brain.

Medical

Medical Testing
If symptoms develop or overexposure is suspected, the following are recommended:

- Kidney function tests
- Exam of the nervous system
- EEG

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

You have a legal right to request copies of your medical testing under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).
Workplace Controls and Practices

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at [www.cdc.gov/niosh/topics/ctrlbanding](http://www.cdc.gov/niosh/topics/ctrlbanding).

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing

- Avoid skin contact with Ethylene Glycol. Wear personal protective equipment made from material that can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- The recommended glove materials for Ethylene Glycol are Butyl, Nitrile, Neoprene, Natural Rubber, Silver Shield®/4H®, Viton, Viton/Butyl and Barrier®.
- The recommended protective clothing materials for Ethylene Glycol are Tychem® SL, BR, CSM and TK; and Trellchem® HPS and VPS, or the equivalent.
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection

- Wear indirect vent goggles when working with liquids that may splash, spray or mist. A face shield is also required if the liquid is severely irritating or corrosive to the skin and eyes.

Respiratory Protection

Improper use of respirators is dangerous. Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134). Only NIOSH approved respirators should be used.

- Where the potential exists for exposure over 39 mg/m³, use a respirator with a combination organic vapor and P100 cartridge. Increased protection is obtained from full facepiece powered-air purifying respirators.
- Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect Ethylene Glycol, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. It if is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
- Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefiltrors or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
- Where the potential for overexposure exists, use a supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus or an emergency escape air cylinder.

Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Ethylene Glycol is a COMBUSTIBLE LIQUID.
- Use dry chemical, CO₂, water spray or alcohol-resistant foam as extinguishing agents.
- POISONOUS GASES ARE PRODUCED IN FIRE.
- Use water spray to keep fire-exposed containers cool.
ETHYLENE GLYCOL

Spills and Emergencies
If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If **Ethylene Glycol** is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Absorb liquids in dry sand, earth, or a similar material and place into sealed containers for disposal.
- Ventilate and wash area after clean-up is complete.
- It may be necessary to contain and dispose of **Ethylene Glycol** as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

Handling and Storage
Prior to working with **Ethylene Glycol** you should be trained on its proper handling and storage.

- **Ethylene Glycol** is not compatible with OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE); STRONG ACIDS (such as HYDROCHLORIC, SULFURIC and NITRIC); STRONG BASES (such as SODIUM HYDROXIDE and POTASSIUM HYDROXIDE); ALIPHATIC AMINES; ISOCYANATES; CHLOROSULFONIC ACID; and OLEUM.
- Store in tightly closed containers in a cool, well-ventilated area away from MOISTURE.
- Sources of ignition, such as smoking and open flames, are prohibited where **Ethylene Glycol** is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Occupational Health Information Resources
The New Jersey Department of Health, Occupational Health Service, offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

ETHYLENE GLYCOL

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGs) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

The critical temperature is the temperature above which a gas cannot be liquefied, regardless of the pressure applied.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

PERMEATED is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGs and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Air), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.
**Common Name:** ETHYLENE GLYCOL

**Synonyms:** 1,2-Dihydroxyethane; 1,2-Ethanediol; Ethylene Alcohol

**CAS No:** 107-21-1

**Molecular Formula:** \( \text{C}_2\text{H}_6\text{O}_2 \)

**RTK Substance No:** 0878

**Description:** Clear, colorless, thick liquid

**DOT#:** None

**ERG Guide #:** 171

**Hazard Class:** None

### PHYSICAL PROPERTIES

- **Odor Threshold:** 62.5 ppm
- **Flash Point:** 232°F (111°C)
- **LEL:** 3.2%
- **UEL:** 15.3%
- **Auto Ignition Temp:** 748°F (398°C)
- **Vapor Density:** 2.14 (air = 1)
- **Vapor Pressure:** 0.05 mm Hg at 68°F (20°C)
- **Specific Gravity:** 1.1 (water = 1)
- **Water Solubility:** Soluble
- **Boiling Point:** 387°F (197°C)
- **Freezing Point:** 8.6°F (-13°C)
- **Critical Temp:** 833°F (445°C)

**Molecular Weight:** 62.07

### EXPOSURE LIMITS

**ACGIH:** 39 ppm, Ceiling

The Protective Action Criteria values are:

- PAC-1 = 30 ppm
- PAC-2 = 40 ppm
- PAC-3 = 60 ppm

### PROTECTIVE EQUIPMENT

- **Gloves:** Butyl, Nitrile, Neoprene, Natural Rubber, Silver Shield®/4H®, Viton, Viton/Butyl and Barrier® (>8-hr breakthrough)
- **Coveralls:** Tychem® SL, BR, CSM and TK; and Trellchem® HPS and VPS (>8-hr breakthrough)
- **Respirator:** >39 mg/m\(^3\) - full facepiece APR with Organic vapor and P100 cartridges

- >39 mg/m\(^3\) in fire conditions - SCBA

### HEALTH EFFECTS

- **Eyes:** Irritation
- **Skin:** Irritation
- **Inhalation:** Nose and throat irritation
- **Chronic:** Headache, nausea, vomiting, dizziness, slurred speech, convulsions, and coma

### FIRST AID AND DECONTAMINATION

- **Remove** the person from exposure.
- **Flush** eyes with large amounts of water for at least 15 minutes. Remove contact lenses.
- **Quickly** remove contaminated clothing and wash contaminated skin with large amounts of soap and water.
- **Begin** artificial respiration if breathing has stopped and CPR if necessary.
- **Transfer** promptly to a medical facility.
