Common Name: ETHYL MERCURIC CHLORIDE

CAS Number: 107-27-7
DOT Number: UN 2777

HAZARD SUMMARY
* Ethyl Mercuric Chloride can affect you when breathed in and by passing through your skin.
* Ethyl Mercuric Chloride may cause mutations. Handle with extreme caution.
* Contact can cause skin and eye irritation with possible eye damage.
* Breathing Ethyl Mercuric Chloride can irritate the nose, throat and lungs causing coughing, wheezing and/or shortness of breath.
* Mercury poisoning can cause “shakes”, irritability, sore gums, increased saliva, hearing and memory loss, metallic taste, slurred speech and personality changes.
* Ethyl Mercuric Chloride is an extremely toxic chemical that can cause permanent brain damage, often with no warning at the time of exposure. Severe poisoning can cause death.
* Ethyl Mercuric Chloride may damage the kidneys.

IDENTIFICATION
Ethyl Mercuric Chloride is a crystalline (sand-like) solid. It is used as a fungicide.

REASON FOR CITATION
* Ethyl Mercuric Chloride is on the Hazardous Substance List because it is regulated by OSHA and cited by ACGIH, DOT, NIOSH, DEP and EPA.
* Definitions are provided on page 5.

HOW TO DETERMINE IF YOU ARE BEING EXPOSED
The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information and training concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard, 1910.1200, requires private employers to provide similar training and information to their employees.

* Exposure to hazardous substances should be routinely evaluated. This may include collecting personal and area air samples. You can obtain copies of sampling results from your employer. You have a legal right to this information under OSHA 1910.1020.

WORKPLACE EXPOSURE LIMITS
The following exposure limits are for alkyl Mercury compounds (measured as Mercury):

OSHA: The legal airborne permissible exposure limit (PEL) is 0.01 mg/m³ averaged over an 8-hour workshift and 0.04 mg/m³, not to be exceeded at any time.

NIOSH: The recommended airborne exposure limit is 0.01 mg/m³ averaged over a 10-hour workshift and 0.03 mg/m³, not to be exceeded during any 15 minute work period.

ACGIH: The recommended airborne exposure limit is 0.01 mg/m³ averaged over an 8-hour workshift and 0.03 mg/m³ as a STEL (short term exposure limit).

* Ethyl Mercuric Chloride may cause mutations. All contact with this chemical should be reduced to the lowest possible level.
* The above exposure limits are for air levels only. When skin contact also occurs, you may be overexposed, even though air levels are less than the limits listed above.

WAYS OF REDUCING EXPOSURE
* Where possible, enclose operations and use local exhaust ventilation at the site of chemical release. If local exhaust ventilation or enclosure is not used, respirators should be worn.
* Wear protective work clothing.
* Wash thoroughly immediately after exposure to Ethyl Mercuric Chloride and at the end of the workshift.
* Post hazard and warning information in the work area. In addition, as part of an ongoing education and training effort, communicate all information on the health and safety hazards of Ethyl Mercuric Chloride to potentially exposed workers.
This Fact Sheet is a summary source of information of all potential and most severe health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

HEALTH HAZARD INFORMATION

Acute Health Effects
The following acute (short-term) health effects may occur immediately or shortly after exposure to Ethyl Mercuric Chloride:

* Contact can cause skin and eye irritation with possible eye damage.
* Breathing Ethyl Mercuric Chloride can irritate the nose, throat and lungs causing coughing, wheezing and/or shortness of breath.

Chronic Health Effects
The following chronic (long-term) health effects can occur at some time after exposure to Ethyl Mercuric Chloride and can last for months or years:

Cancer Hazard
* Ethyl Mercuric Chloride may cause mutations (genetic changes). Whether or not it poses a cancer or reproductive hazard needs further study.

Reproductive Hazard
* While Ethyl Mercuric Chloride has not been tested for its ability to cause reproductive damage, it should be HANDLED WITH CAUTION since several related Mercury compounds are known teratogens in humans.

Other Long-Term Effects
* Ethyl Mercuric Chloride is an extremely toxic chemical that can cause permanent brain damage, often with no warning at the time of exposure. Severe poisoning can cause death.
* High or repeated exposure can cause Mercury poisoning. Mercury poisoning causes "shakes" (often with shaky handwriting), irritability, sore gums and increased saliva. Other changes may include hearing and memory loss, extreme shyness, weakness, poor appetite, "pins and needles" feeling and metallic taste. Serious personality changes and slurred speech can occur, especially if exposure continues.
* Ethyl Mercuric Chloride may damage the kidneys.
* Mercury accumulates in the body with repeated exposure. It can take months or years for the body to get rid of excess Mercury.

MEDICAL

Medical Testing
Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended, with:

* Exam of the nervous system, including handwriting.
* Hearing test.
* Routine urine tests (UA).
* Urine test for Mercury (should be less than 0.02 mg/liter).
* Eye exam.

If symptoms develop or overexposure is suspected, the following are recommended:

* Consider nerve conduction tests, urinary enzymes and neurobehavioral testing.

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under OSHA 1910.1020.

Mixed Exposures
* Creams to whiten or bleach the skin may contain Mercury; if so, their use increases risk. A high fish diet, especially of marine predatory (fish-eating) fish, may increase blood Mercury.

Conditions Made Worse By Exposure
* Persons allergic to Mercury may also react to Mercurochrome or Merthiolate which contain Mercury.

WORKPLACE CONTROLS AND PRACTICES

Unless a less toxic chemical can be substituted for a hazardous substance, ENGINEERING CONTROLS are the most effective way of reducing exposure. The best protection is to enclose operations and/or provide local exhaust ventilation at the site of chemical release. Isolating operations can also reduce exposure. Using respirators or protective equipment is less effective than the controls mentioned above, but is sometimes necessary.

In evaluating the controls present in your workplace, consider: (1) how hazardous the substance is, (2) how much of the substance is released into the workplace and (3) whether harmful skin or eye contact could occur. Special controls should be in place for highly toxic chemicals or when significant skin, eye, or breathing exposures are possible.
In addition, the following controls are recommended:

* Where possible, automatically transfer Ethyl Mercuric Chloride from drums or other storage containers to process containers.
* Work surfaces should be cleaned thoroughly on a routine basis.

Good WORK PRACTICES can help to reduce hazardous exposures. The following work practices are recommended:

* Workers whose clothing has been contaminated by Ethyl Mercuric Chloride should change into clean clothing promptly.
* Do not take contaminated work clothes home. Family members could be exposed.
* Contaminated work clothes should be laundered by individuals who have been informed of the hazards of exposure to Ethyl Mercuric Chloride.
* Eye wash fountains should be provided in the immediate work area for emergency use.
* If there is the possibility of skin exposure, emergency shower facilities should be provided.
* On skin contact with Ethyl Mercuric Chloride, immediately wash or shower to remove the chemical. At the end of the workshift, wash any areas of the body that may have contacted Ethyl Mercuric Chloride, whether or not known skin contact has occurred.
* Do not eat, smoke, or drink where Ethyl Mercuric Chloride is handled, processed, or stored, since the chemical can be swallowed. Wash hands carefully before eating, drinking, smoking, or using the toilet.
* For clean-up use a specialized charcoal-filtered vacuum or suction pump to avoid generating Mercury vapor. Care should be taken not to disturb spilled material.

PERSONAL PROTECTIVE EQUIPMENT

WORKPLACE CONTROLS ARE BETTER THAN PERSONAL PROTECTIVE EQUIPMENT. However, for some jobs (such as outside work, confined space entry, jobs done only once in a while, or jobs done while workplace controls are being installed), personal protective equipment may be appropriate.

OSHA 1910.132 requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Clothing
* Avoid skin contact with Ethyl Mercuric Chloride. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation.
* There is no quantitative information available at the present time on what type of gloves or chemical protective clothing offers protection from permeation or degradation by Mercury and its compounds.
* All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection
* Wear impact resistant eye protection with side shields or goggles.
* Wear a face shield along with goggles when working with corrosive, highly irritating or toxic substances.

Respiratory Protection
IMPROPER USE OF RESPIRATORS IS DANGEROUS. Such equipment should only be used if the employer has a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing and medical exams, as described in OSHA 1910.134.

* For field applications check with your supervisor and your safety equipment supplier regarding the appropriate respiratory equipment.
* Where the potential exists for exposure over 0.01 mg/m³ (as Mercury), use a MSHA/NIOSH approved supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode.
* Exposure to 2 mg/m³ (as Mercury) is immediately dangerous to life and health. If the possibility of exposure above 2 mg/m³ (as Mercury) exists, use a MSHA/NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode.

QUESTIONS AND ANSWERS

Q: If I have acute health effects, will I later get chronic health effects?
A: Not always. Most chronic (long-term) effects result from repeated exposures to a chemical.

Q: Can I get long-term effects without ever having short-term effects?
A: Yes, because long-term effects can occur from repeated exposures to a chemical at levels not high enough to make you immediately sick.

Q: What are my chances of getting sick when I have been exposed to chemicals?
A: The likelihood of becoming sick from chemicals is increased as the amount of exposure increases. This is determined by the length of time and the amount of material to which someone is exposed.
Q: When are higher exposures more likely?
A: Conditions which increase risk of exposure include dust releasing operations (grinding, mixing, blasting, dumping, etc.), other physical and mechanical processes (heating, pouring, spraying, spills and evaporation from large surface areas such as open containers), and "confined space" exposures (working inside vats, reactors, boilers, small rooms, etc.).

Q: Is the risk of getting sick higher for workers than for community residents?
A: Yes. Exposures in the community, except possibly in cases of fires or spills, are usually much lower than those found in the workplace. However, people in the community may be exposed to contaminated water as well as to chemicals in the air over long periods. This may be a problem for children or people who are already ill.

Q: Can men as well as women be affected by chemicals that cause reproductive system damage?
A: Yes. Some chemicals reduce potency or fertility in both men and women. Some damage sperm and eggs, possibly leading to birth defects.

Q: Who is at the greatest risk from reproductive hazards?
A: Pregnant women are at greatest risk from chemicals that harm the developing fetus. However, chemicals may affect the ability to have children, so both men and women of childbearing age are at high risk.

Q: What are the likely health problems from chemicals which cause mutations?
A: There are two primary health concerns associated with mutagens: (1) cancers can result from changes induced in cells and, (2) adverse reproductive and developmental outcomes can result from damage to the egg and sperm cells.

The following information is available from:

New Jersey Department of Health and Senior Services
Occupational Health Service
PO Box 360
Trenton, NJ 08625-0360
(609) 984-1863
(609) 292-5677 (fax)

Web address: http://www.state.nj.us/health/ehoh/odisweb/

Industrial Hygiene Information
Industrial hygienists are available to answer your questions regarding the control of chemical exposures using exhaust ventilation, special work practices, good housekeeping, good hygiene practices, and personal protective equipment including respirators. In addition, they can help to interpret the results of industrial hygiene survey data.

Medical Evaluation
If you think you are becoming sick because of exposure to chemicals at your workplace, you may call personnel at the Department of Health and Senior Services, Occupational Health Service, who can help you find the information you need.

Public Presentations
Presentations and educational programs on occupational health or the Right to Know Act can be organized for labor unions, trade associations and other groups.

Right to Know Information Resources
The Right to Know Infoline (609) 984-2202 can answer questions about the identity and potential health effects of chemicals, list of educational materials in occupational health, references used to prepare the Fact Sheets, preparation of the Right to Know survey, education and training programs, labeling requirements, and general information regarding the Right to Know Act. Violations of the law should be reported to (609) 984-2202.
DEFINITIONS

ACGIH is the American Conference of Governmental Industrial Hygienists. It recommends upper limits (called TLVs) for exposure to workplace chemicals.

A carcinogen is a substance that causes cancer.

The CAS number is assigned by the Chemical Abstracts Service to identify a specific chemical.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes irreversible damage to human tissue or containers.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

HHAG is the Human Health Assessment Group of the federal EPA.

IARC is the International Agency for Research on Cancer, a scientific group that classifies chemicals according to their cancer-causing potential.

A miscible substance is a liquid or gas that will evenly dissolve in another.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

MSHA is the Mine Safety and Health Administration, the federal agency that regulates mining. It also evaluates and approves respirators.

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NAERG is the North American Emergency Response Guidebook. It was jointly developed by Transport Canada, the United States Department of Transportation and the Secretariat of Communications and Transportation of Mexico. It is a guide for first responders to quickly identify the specific or generic hazards of material involved in a transportation incident, and to protect themselves and the general public during the initial response phase of the incident.

NCI is the National Cancer Institute, a federal agency that determines the cancer-causing potential of chemicals.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the Public Employees Occupational Safety and Health Act, a state law which sets PELs for New Jersey public employees.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

A teratogen is a substance that causes birth defects by damaging the fetus.

TLV is the Threshold Limit Value, the workplace exposure limit recommended by ACGIH.

The vapor pressure is a measure of how readily a liquid or a solid mixes with air at its surface. A higher vapor pressure indicates a higher concentration of the substance in air and therefore increases the likelihood of breathing it in.
Common Name: **ETHYL MERCURIC CHLORIDE**
DOT Number: **UN 2777**
NAERG Code: **151**
CAS Number: **107-27-7**

**POISONOUS GASES ARE PRODUCED IN FIRE CONTAINERS MAY EXPLODE IN FIRE**

**Hazard Rating Key:** 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

**FIRE HAZARDS**

* Use dry chemical, CO₂, water spray, or foam extinguishers.
* **POISONOUS GASES ARE PRODUCED IN FIRE,** including *Mercury vapor* and *Chlorine.*
* CONTAINERS MAY EXPLODE IN FIRE.
* Use water spray to keep fire-exposed containers cool.
* If employees are expected to fight fires, they must be trained and equipped as stated in OSHA 1910.156.

**SPILLS AND EMERGENCIES**

If **Ethyl Mercuric Chloride** is spilled, take the following steps:

* Evacuate persons not wearing protective equipment from area of spill until clean-up is complete.
* Spills should be collected with special *Mercury vapor* suppressants or special vacuums. Kits specific for clean-up of *Mercury* spills are available.
* Ventilate and wash area after clean-up is complete.
* It may be necessary to contain and dispose of **Ethyl Mercuric Chloride** as a HAZARDOUS WASTE. Contact your Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.
* If employees are required to clean-up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

**HANDLING AND STORAGE**

* Prior to working with **Ethyl Mercuric Chloride** you should be trained on its proper handling and storage.
* **Ethyl Mercuric Chloride** is not compatible with **OXIDIZING AGENTS** (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE).
* Store in tightly closed containers in a cool, well-ventilated area.

**FIRST AID**

In NJ, for POISON INFORMATION call 1-800-764-7661

**Eye Contact**

* Immediately flush with large amounts of water for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention.

**Skin Contact**

* Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water.

**Breathing**

* Remove the person from exposure.
* Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
* Transfer promptly to a medical facility.

**PHYSICAL DATA**

**Water Solubility:** Insoluble

**OTHER COMMONLY USED NAMES**

**Chemical Name:**
Mercury, Chloroethyl-

**Other Names:**
Ethylmercury Chloride; Ceresan; EMC; Granosan

Not intended to be copied and sold for commercial purposes.
