Common Name: **FERRIC NITRATE**

Synonyms: Iron(III) Nitrate; Iron Trinitrate  
Chemical Name: Nitric Acid, Iron(3+) Salt (3:1)  
Date: December 2008  
Revision: April 2017

### Description and Use

**Ferric Nitrate** is a pale violet, green or white, odorless, crystalline (sand-like) solid. It is used in textile dyeing and tanning, and as a chemical reagent and corrosion inhibitor.

### Reasons for Citation

- **Ferric Nitrate** is on the Right to Know Hazardous Substance List because it is cited by ACGIH, DOT, NIOSH and EPA.

### FIRST AID

**Eye Contact**
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

**Skin Contact**
- Remove contaminated clothing and wash contaminated skin with water.

**Inhalation**
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.

### EMERGENCY NUMBERS

- **Poison Control:** 1-800-222-1222
- **CHEMTREC:** 1-800-424-9300
- **NJDEP Hotline:** 1-877-927-6337
- **National Response Center:** 1-800-424-8802

**STRONG OXIDIZER**

POISONOUS GASES ARE PRODUCED IN FIRE

DOES NOT BURN

Hazard Rating Key: 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- **Ferric Nitrate** can affect you when inhaled.
- Contact can irritate the skin and eyes.
- Inhaling **Ferric Nitrate** can irritate the nose and throat causing coughing and wheezing.
- High levels of this substance may reduce the blood’s ability to transport Oxygen, causing headache, fatigue, dizziness, and a blue color to the skin and lips (methemoglobinemia).
- Repeated high exposures may lead to too much Iron build-up in the body causing nausea, vomiting, stomach pain, constipation, and black bowel movements.
- **Ferric Nitrate** may affect the liver.
- **Ferric Nitrate** is not combustible, but it is a STRONG OXIDIZER that enhances the combustion of other substances.

### Workplace Exposure Limits

The following exposure limits are for **Iron salts, soluble** (measured as **Iron**):

- **NIOSH:** The recommended airborne exposure limit (REL) is 1 mg/m³ averaged over a 10-hour workshift.
- **ACGIH:** The threshold limit value (TLV) is 1 mg/m³ averaged over an 8-hour workshift.
Determining Your Exposure

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health and Senior Services Hazardous Substance Fact Sheet, available on the RTK Program website (http://nj.gov/health/workplacehealthandsafety/right-to-know/) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act, the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) requires private employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

Health Hazard Information

**Acute Health Effects**
The following acute (short-term) health effects may occur immediately or shortly after exposure to Ferric Nitrate:

- Contact can irritate the skin and eyes.
- Inhaling Ferric Nitrate can irritate the nose and throat causing coughing and wheezing.
- High levels of this substance may reduce the blood’s ability to transport Oxygen, causing headache, fatigue, dizziness, and a blue color to the skin and lips (methemoglobinemia). Exposure to very high levels can cause trouble breathing, collapse and even death.

**Chronic Health Effects**
The following chronic (long-term) health effects can occur at some time after exposure to Ferric Nitrate and can last for months or years:

**Cancer Hazard**
- According to the information presently available to the New Jersey Department of Health, Ferric Nitrate has not been tested for its ability to cause cancer in animals.

**Reproductive Hazard**
- According to the information presently available to the New Jersey Department of Health, Ferric Nitrate has not been tested for its ability to affect reproduction.

**Other Effects**
- Repeated high exposures may lead to too much iron build-up in the body causing nausea, vomiting, stomach pain, constipation, and black bowel movements.
- Ferric Nitrate may affect the liver.

**Medical**

**Medical Testing**
If symptoms develop or overexposure is suspected, the following are recommended:

- Liver function tests
- Blood methemoglobin level
- Serum Iron test

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

**Mixed Exposures**
- More than light alcohol consumption can cause liver damage. Drinking alcohol can increase the liver damage caused by Ferric Nitrate.
- Since this is an Iron compound, taking pills with large amounts of Iron (as in some vitamin pills) is not recommended without medical advice.
Workplace Controls and Practices

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at [www.cdc.gov/niosh/topics/ctrlbanding](http://www.cdc.gov/niosh/topics/ctrlbanding).

The following work practices are also recommended:

► Label process containers.
► Provide employees with hazard information and training.
► Monitor airborne chemical concentrations.
► Use engineering controls if concentrations exceed recommended exposure levels.
► Provide eye wash fountains and emergency showers.
► Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

In addition, the following may be useful or required:

► Use a vacuum or a wet method to reduce dust during clean-up. DO NOT DRY SWEEP.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing

► Avoid skin contact with Ferric Nitrate. Wear personal protective equipment made from material which can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
► Safety equipment manufacturers recommend Nitrile and Natural Rubber for gloves, and Tyvek®, or the equivalent, as a protective material for clothing.
► All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection

► Wear eye protection with side shields or goggles.
► If additional protection is needed for the entire face, use in combination with a face shield. A face shield should not be used without another type of eye protection.

Respiratory Protection

**Improper use of respirators is dangerous.** Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

► Where the potential exists for exposure over 1 mg/m³ (as Iron), use a NIOSH approved negative pressure, air-purifying, particulate filter respirator with an N, R or P95 filter. More protection is provided by a full facepiece respirator than by a half-mask respirator, and even greater protection is provided by a powered-air-purifying respirator.
► Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect Ferric Nitrate, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
► Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefilters or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
► Where the potential exists for exposure over 13 mg/m³ (as Iron), use a NIOSH approved self-contained breathing apparatus or a supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode.

Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

► Ferric Nitrate is not combustible, but it is a STRONG OXIDIZER that enhances the combustion of other substances.
► Use water only. DO NOT USE DRY CHEMICAL or CO₂ as extinguishing agents.
► POISONOUS GASES ARE PRODUCED IN FIRE, including Nitrogen Oxides and Nitric Acid.
Spills and Emergencies
If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Ferric Nitrate is spilled, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Moisten spilled material first or use a HEPA-filter vacuum for clean-up and place into sealed containers for disposal.
- Neutralize liquid spills with dry lime, sand or soda ash and place into sealed containers for disposal.
- Ventilate and wash area after clean-up is complete.
- DO NOT wash into sewer.
- It may be necessary to contain and dispose of Ferric Nitrate as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

Handling and Storage
Prior to working with Ferric Nitrate you should be trained on its proper handling and storage.

- Ferric Nitrate may react with ORGANIC COMPOUNDS; COMBUSTIBLES; REDUCING AGENTS (such as LITHIUM, SODIUM, ALUMINUM and their HYDRIDES); and ALKYL ESTERS to cause fires and explosions.
- Ferric Nitrate is not compatible with METALS (especially pyrophoric metals such as finely divided ALUMINUM and MAGNESIUM); CYANIDE COMPOUNDS; METAL SALTS; STRONG ACIDS (such as HYDROCHLORIC, SULFURIC and NITRIC); ALCOHOLS; HYDRAZINE; PEROXIDES; GLYCIDOL; ETHERS; and ISOPROPYL CHLOROCARBONATE.
- Store in tightly closed containers in a cool, well-ventilated area away from ORGANICS and COMBUSTIBLES (including wooden floors).
- Water solutions of Ferric Nitrate are corrosive to METALS.

Occupational Health Information Resources
The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a-lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGLs and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Hydrogen), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.
Common Name: **FERRIC NITRATE**

Synonyms: Iron(III) Nitrate; Iron Trinitrate

CAS No: 10421-48-4

Molecular Formula: FeN₃O₉

RTK Substance No: 0924

Description: Pale violet, green or white, odorless, crystalline solid

Hazard Class: 5.1 (Oxidizer)

---

### SPILL/LEAKS

**Isolation Distance:**

**Spill:** 25 meters (75 feet)

**Fire:** 800 meters (1/2 mile)

Moisten spilled material first or use a HEPA-filter vacuum for clean-up and place into sealed containers for disposal.

Neutralize liquid spills with dry lime, sand or soda ash and place into sealed containers for disposal.

DO NOT wash into sewer.

---

### PHYSICAL PROPERTIES

**Odor Threshold:** Odorless

**Flash Point:** Nonflammable

**Specific Gravity:** 1.7 (water = 1)

**Water Solubility:** Soluble

**Boiling Point:** Decomposes at <212°F (<100°C)

**Melting Point:** 117°F (47°C)

**Molecular Weight:** 242

---

### EXPOSURE LIMITS

**NIOSH:** 1 mg/m³, 10-hr TWA (as Iron)

**ACGIH:** 1 mg/m³, 8-hr TWA (as Iron)

The Protective Action Criteria values are:

PAC-1 = 13 mg/m³; PAC-2 = 140 mg/m³; PAC-3 = 850 mg/m³

---

### PROTECTIVE EQUIPMENT

**Gloves:** Nitrile and Natural Rubber

**Coveralls:** Tyvek®

**Respirator:** >1 mg/m³ - full facepiece APR with High efficiency filter

>13 mg/m³ - Pressure demand supplied air or SCBA

---

### HEALTH EFFECTS

**Eyes:** Irritation

**Skin:** Irritation

**Inhalation:** Nose and throat irritation with coughing and wheezing

Headache, fatigue, dizziness and a blue color to the skin and lips (methemoglobinemia)

---

### FIRST AID AND DECONTAMINATION

**Remove** the person from exposure.

**Flush** eyes with large amounts of water for at least 15 minutes. Remove contact lenses if worn.

**Remove** contaminated clothing and wash contaminated skin with water.

**Begin** artificial respiration if breathing has stopped and CPR if necessary.

**Transfer** promptly to a medical facility.
