**Common Name:** PARATHION

**Synonyms:** Ethyl Parathion; Methyl Parathion

**Chemical Name:** Phosphorothioic Acid, O,O-Diethyl O-(4-Nitrophenyl)Ester

**Date:** October 2000  
**Revision:** June 2010

**CAS Number:** 56-38-2  
**RTK Substance Number:** 1459  
**DOT Number:** UN 2783

**Description and Use**

Parathion is a yellowish liquid with a garlic-like odor when pure. The commercial product is usually dissolved in a hydrocarbon solvent (such as Toluene or Xylene). It is used as an agricultural Organophosphate insecticide.

- **ODOR THRESHOLD = 0.04 ppm**
- Odor thresholds vary greatly. Do not rely on odor alone to determine potentially hazardous exposures.

**Reasons for Citation**

- **Parathion** is on the Right to Know Hazardous Substance List because it is cited by OSHA, ACGIH, DOT, NIOSH, DEP, IARC, IRIS and EPA.
- This chemical is on the Special Health Hazard Substance List.

**Hazard Summary**

**Hazard Rating Key:** 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

**FIRST AID**

**Eye Contact**
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while flushing. Seek medical attention.

**Skin Contact**
- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water. Seek medical attention.
- Shampoo hair immediately if contaminated.

**Inhalation**
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.
- Medical observation is recommended for 24 to 48 hours after overexposure, as pulmonary edema may be delayed.

**EMERGENCY NUMBERS**

- **Poison Control:** 1-800-222-1222
- **CHEMTREC:** 1-800-424-9300
- **NJDEP Hotline:** 1-877-927-6337
- **National Response Center:** 1-800-424-8802

**Workplace Exposure Limits**

- **OSHA:** The legal airborne permissible exposure limit (PEL) is 0.1 mg/m³ averaged over an 8-hour workshift.
- **NIOSH:** The recommended airborne exposure limit (REL) is 0.05 mg/m³ averaged over a 10-hour workshift.
- **ACGIH:** The threshold limit value (TLV) is 0.05 mg/m³ (as the inhalable fraction and vapor) averaged over an 8-hour workshift.

**EMERGENCY RESPONDERS >>>> SEE LAST PAGE**
Determining Your Exposure

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK website (www.nj.gov/health/eoh/rtkweb) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act and the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health (OSHA) Act if you are a private worker.
- The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) require employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

Health Hazard Information

Acute Health Effects
The following acute (short-term) health effects may occur immediately or shortly after exposure to Parathion:

- Contact can irritate the skin and eyes.
- Exposure can cause rapid, FATAL, Organophosphate poisoning with headache, dizziness, blurred vision, tightness in the chest, sweating, nausea and vomiting, diarrhea, muscle twitching, loss of coordination, convulsions, coma and death.
- Inhaling Parathion can irritate the lungs causing coughing and/or shortness of breath. Higher exposures may cause a build-up of fluid in the lungs (pulmonary edema), a medical emergency, with severe shortness of breath.

Chronic Health Effects
The following chronic (long-term) health effects can occur at some time after exposure to Parathion and can last for months or years:

- Cancer Hazard
  - Parathion may be a CARCINOGEN in humans since it has been shown to cause cancer of the adrenal gland in animals.
  - Many scientists believe there is no safe level of exposure to a carcinogen.

Reproductive Hazard
- Parathion may damage the developing fetus.

Other Effects
- Parathion can irritate the lungs. Repeated exposure may cause bronchitis to develop with coughing, phlegm, and/or shortness of breath.
- Repeated exposure may cause personality changes such as depression, anxiety or irritability.
- High or repeated exposure may damage the nerves causing weakness, "pins and needles," and poor coordination in the arms and legs.

Medical

Medical Testing
Before employment and at regular times after that, the following are recommended:

- Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks, but red blood cell levels may be reduced for 1-3 months.
- When cholinesterase enzyme levels are reduced by 25% or more below pre-employment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving Organophosphate or Carbamate pesticides is recommended until enzyme levels recover.

If symptoms develop or overexposure occurs, repeat the preceding tests as soon as possible and get an exam of the nervous system and chest x-ray after.

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

Mixed Exposures
- Smoking can cause heart disease, lung cancer, emphysema, and other respiratory problems. It may worsen respiratory conditions caused by chemical exposure. Even if you have smoked for a long time, stopping now will reduce your risk of developing health problems.
Workplace Controls and Practices

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at [www.cdc.gov/niosh/topics/crblanding/](http://www.cdc.gov/niosh/topics/crblanding/).

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

In addition, the following may be useful or required:

- Where possible, transfer Parathion from drums or other containers to process containers in an enclosed system.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing

- Avoid skin contact with Parathion. Wear personal protective equipment made from material which can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- Safety equipment manufacturers recommend Butyl and Silver Shield®/4H® as glove materials for Organophosphorus compounds, and Tychem® BR, Responder®, and TK, or the equivalent, as protective clothing materials for Organophosphorus compounds.
- Where exposure to cold equipment, vapors, or liquid may occur, employees should be provided with insulated gloves and special clothing designed to prevent the freezing of body tissues.

- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection

- Wear indirect-vent, impact and splash resistant goggles when working with liquids.
- If additional protection is needed for the entire face, use in combination with a face shield. A face shield should not be used without another type of eye protection.

Respiratory Protection

Improper use of respirators is dangerous. Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- Where the potential exists for exposure over 0.05 mg/m³, use a NIOSH approved full facepiece respirator with an organic vapor cartridge with a P100 prefilter. Increased protection is obtained from full facepiece powered-air purifying respirators.
- Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect Parathion, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
- Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefilters or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
- Where the potential for high exposure exists, use a NIOSH approved supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus or an emergency escape air cylinder.
- Exposure to 10 mg/m³ is immediately dangerous to life and health. If the possibility of exposure above 10 mg/m³ exists, use a NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode equipped with an emergency escape air cylinder.

Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Parathion is often dissolved in a liquid carrier which may be flammable or combustible.
- Use dry chemical, CO₂, water spray or foam as extinguishing agents.
- POISONOUS GASES ARE PRODUCED IN FIRE, including Nitrogen Oxides, Sulfur Oxides, Phosphorus Oxides and Diethyl Sulfide.
- CONTAINERS MAY EXPLODE IN FIRE.
- Use water spray to keep fire-exposed containers cool and to disperse vapors.
Spills and Emergencies

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Parathion is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Treat liquid spills with an alkaline material (such as Calcium Carbonate or Soda Ash).
- Absorb liquids in dry sand, earth, or a similar material and place into sealed containers for disposal.
- Ventilate area of spill or leak.
- Keep Parathion (in a flammable solvent) out of confined spaces, such as sewers, because of the possibility of an explosion.
- DO NOT wash into sewer.
- It may be necessary to contain and dispose of Parathion as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

Handling and Storage

Prior to working with Parathion you should be trained on its proper handling and storage.

- Parathion is not compatible with OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE) and ALKALINE MATERIALS (such as LIME, SODA ASH, and BAKING SODA).
- Parathion attacks some forms of PLASTICS, RUBBER or COATINGS.
- Store in tightly closed containers in a cool, well-ventilated area away from COMBUSTIBLES and keep temperatures below 77°F to 86°F (25°C to 30°C).
- Sources of ignition, such as smoking and open flames, are prohibited where Parathion is used, handled, or stored in a manner that could create a potential fire or explosion hazard.
- For Parathion (in a flammable solvent), metal containers involving the transfer of Parathion should be grounded and bonded.
- For Parathion (in a flammable solvent), use only non-sparking tools and equipment, especially when opening and closing containers of Parathion.

Occupational Health Information Resources

The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLS) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

The critical temperature is the temperature above which a gas cannot be liquefied, regardless of the pressure applied.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGLS and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Air), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.
**Common Name:** PARATHION

**Synonyms:** Ethyl Parathion; Methyl Parathion  
**CAS No:** 56-38-2  
**Molecular Formula:** C₁₀H₁₄NO₅PS  
**RTK Substance No:** 1459  
**Description:** Yellowish liquid with a garlic-like odor when pure, commercial product is usually dissolved in a hydrocarbon solvent (such as Toluene or Xylene)

**DOT#:** UN 2783  
**ERG Guide #:** 152  
**Hazard Class:** 6.1 (Poison)

### PHYSICAL PROPERTIES

- **Odor Threshold:** 0.04 ppm  
- **Flash Point:** 248°F to 320°F (120°C to 160°C)  
- **Vapor Pressure:** 0.00004 mm Hg at 68°F (20°C)  
- **Specific Gravity:** 1.26 (water = 1)  
- **Water Solubility:** Slightly soluble  
- **Boiling Point:** 70°F (375°C)  
- **Freezing Point:** 43°F (6°C)  
- **Molecular Weight:** 291.2

### EXPOSURE LIMITS

- **OSHA:** 0.1 mg/m³, 8-hr TWA  
- **NIOSH:** 0.05 mg/m³, 10-hr TWA  
- **ACGIH:** 0.05 mg/m³, 8-hr TWA  
- **IDLH:** 10 mg/m³  

The Protective Action Criteria values are:  
- PAC-1 = 0.15 mg/m³  
- PAC-2 = 2 mg/m³  
- PAC-3 = 10 mg/m³

### PROTECTIVE EQUIPMENT

- **Gloves:** Butyl and SilverShield®/4H® (>8-hr breakthrough for Organophosphorus compounds)  
- **Coveralls:** Tychem® BR, Responder® and TK (>8-hr breakthrough for Organophosphorus compounds)  
- **Respirator:** Full facepiece APR with Organic vapor cartridges and P100 filters  
- **>2.5 mg/m³ - SCBA**

### HEALTH EFFECTS

- **Eyes:** Irritation  
- **Skin:** Irritation  
- **Inhalation:** Nose, throat and lung irritation, with coughing, and severe shortness of breath (pulmonary edema)  
  - Headache, sweating, nausea and vomiting, loss of coordination, and death (Organophosphate poisoning)  
- **Chronic:** Cancer (adrenal gland) in animals

### FIRST AID AND DECONTAMINATION

- **Remove** the person from exposure.  
- **Flush** eyes with large amounts of water for at least 15 minutes. Remove contact lenses if worn. Seek medical attention immediately.  
- **Quickly** remove contaminated clothing and wash contaminated skin with large amounts of soap and water. Seek medical attention.  
- **Shampoo** hair immediately if contaminated.  
- **Begin** artificial respiration if breathing has stopped and CPR if necessary.  
- **Transfer** promptly to a medical facility.  
- **Medical** observation is recommended as symptoms may be delayed.

June 2010
