

## H. Community Disease Control and Prevention (including Managing Travel-Related Risk of Disease Transmission) Overview

Community Disease Control and Prevention provides guidance on the implementation of non-pharmaceutical interventions (NPIs) to limit the spread of influenza during a pandemic. Which NPIs to use and when depend on the severity of the pandemic, as described in the Centers for Disease Control & Prevention “Interim Pre-Pandemic Planning Guidance: Community Strategy for Pandemic Influenza Mitigation in the United States,” released in February 2007. In addition to the recommended mitigation measures, this section includes:

- Plans involving the CDC’s Division of Global Migration and Quarantine (DGMQ) station at Newark’s Liberty International Airport (Continuing dialogue is occurring for these issues and updates will be added to this plan as they become available.)
- Guidance for home management of patients and close contacts
- Trigger situations for recommending the use of NPIs
