ADDITIONAL NARRATIVE PROVIDED BY THE DIVISION:

Individual Research Grant awards will be awarded to independent investigators with a record of productivity, a demonstrated commitment to spinal cord research, and only for projects that will address significant questions that will advance knowledge in the field. The goals of this program are (1) to encourage independent investigators to undertake research on spinal cord regeneration, recovery and rehabilitation; (2) to encourage scientists who are well-established in other areas to transfer their efforts to spinal cord research; and (3) enable researchers with novel scientific and clinical ideas to test them and develop pilot data needed to seek larger awards from the National Institutes of Health, and other funding sources.

Applicants are encouraged to apply for a one - three year award. Maximum funding is up to \$200,000 per year including direct and indirect costs, (10% maximum for the latter). Successful applicants are offered the opportunity to participate in an approved spinal cord injury techniques course. The NJCSCR will make available up to \$4,000 for a grantee to attend a spinal cord injury techniques course. Grantees are responsible for making all necessary travel and course participation arrangements and payments. All awards are made through one-year contracts. Each funding award within the three-year period will be contingent upon the availability of funds. Second and third year support for all Individual Research grants is contingent upon the review and submission of a Progress Report.
