

PART-TIME INSTRUCTIONAL STAFF SURVEY AND ANALYSIS

INTRODUCTION

Public Law 2002, Chapter 27, calls upon the New Jersey Commission on Higher Education to collect and summarize data regarding part-time instructional staff at the state's public colleges and universities. In July 2002, a survey was sent to the presidents of the nineteen community colleges, eight state colleges and universities¹, and three public research universities. The presidents were asked to collaborate with the majority representative of the employees at their institutions to complete the survey.

Consistent with the provisions of statute, specific information was collected separately for three types of part-time instructional staff members: part-time faculty, part-time lecturer, and adjunct faculty. There was some variance in the use of the three terms among institutions. However, in general, the term part-time faculty refers to faculty who have some or all of the same responsibilities as those who are employed full-time, but their responsibilities are prorated based on the percentage of time they work. Adjunct faculty do not have all of the responsibilities that full-time faculty do; typically they are hired to teach one or more courses, and their responsibilities are often limited to those related to teaching the courses. The term part-time lecturer is not frequently used by the public colleges and universities in New Jersey. Rutgers University uses that term, but their definition of part-time lecturer is consistent with the characteristics of adjunct faculty at other institutions. Therefore, for the purposes of this survey, part-time lecturers at Rutgers are included as adjuncts.

Pursuant to statute, institutions provided information in a tabular format for the fall 2001 and spring 2002 semesters under the following headings: Individual (represented by a number, not a name), Title, Semester Course (credit) Load, Total Semester Compensation (salary), and Benefits. The data are summarized in Tables 1 and 2 (pages 6 and 7). Tables 3 and 4 provide a summary of average course load, compensation, and benefits data (pages 8 and 9).

DATA ANALYSIS

Distribution of part-time instructional staff. Adjunct faculty made up the overwhelming number of part-time instructional staff reported with 8,827 adjuncts employed in fall 2001 and 9,090 in spring 2002; they accounted for approximately 97 percent of all part-time instructional staff in fall 2001 and spring 2002 (Figure 1; Tables 1 and 2). Over half of the adjunct faculty was employed at the community colleges.

¹ Thomas Edison State College is not included because it does not have instructional faculty.

FIGURE 1
PART-TIME INSTRUCTIONAL STAFF AT N.J. PUBLIC COLLEGES AND
UNIVERSITIES

FALL 2001

SPRING 2002

Only public research universities and state colleges and universities employed part-time faculty, reporting a total of 310 in the fall semester and 288 in the spring. Close to half of the part-time faculty reported was employed by UMDNJ.

There were 35 part-time lecturers reported by institutions for the fall semester and 36 for the spring. Only three institutions reported having part-time lecturers on staff (NJIT, Ocean County College, and Richard Stockton College of New Jersey). Analysis of the part-time lecturer data is not warranted due to the small number; however, the data are provided in the tables.

Course load and compensation. The average course load and compensation of adjunct faculty in each semester differed both within and among the sectors (Tables 3 and 4). The average course load was lowest at the research universities and highest at the community colleges. Average compensation was highest in the research university sector and lowest in the community college sector, following a pattern similar to that of full-time faculty salaries at the respective institutions.

Total compensation for adjunct faculty was approximately \$27.1 million in the fall and \$27.3 million in the spring, although average compensation per adjunct decreased slightly from fall to spring. The decrease in average compensation is explained by the employment of an additional 263 adjuncts, which caused the average course load to decrease. All sectors show some course load and compensation decrease, but the average in the research university sector dropped most notably from \$4,660 to \$4,435. Unlike the average total compensation for adjuncts, the average compensation per credit increased somewhat in the state college and university and community college sectors from fall to spring.

Similarly, average compensation for part-time faculty in the research university sector was higher than in the state college and university sector. However, there is no pattern apparent in average course load for part-time faculty. Total compensation for part-time faculty was approximately \$6.1 million in fall 2001 and \$5.6 million in spring 2002.

Benefits. Part-time instructional staff receive Workers' Compensation, Unemployment Insurance, Temporary Disability Insurance, Medicare, and Social Security benefits. They are eligible for pension benefits through the Public Employee Retirement System at the start of the third consecutive semester of continuous employment at a higher education institution. Consistent with provisions for part-time state employees, part-time instructional staff members at the public colleges and universities do not receive health benefits².

Additional benefits, such as sick leave and institutional privileges, are handled by individual institutions and/or collective bargaining where applicable.

² Due to the different nature of the medical school, some part-time instructional staff at UMDNJ qualify for health benefits.

The average value of benefits contributed for part-time faculty at the research universities was \$5,376 in fall 2001 and \$5,356 in spring 2002. The average value of benefits provided for an adjunct was \$500 in fall 2001 and \$481 in spring 2002 (Tables 3 and 4).

At the state colleges and universities, the average value of benefits provided for part-time faculty was \$1,778 in fall 2001 and \$1,831 in spring 2002. For the adjuncts the figures were very consistent, totaling \$308 in fall 2001 and \$309 in spring 2002.

The average value of benefits provided to an adjunct at the community colleges was \$278 in fall 2001 and \$268 in spring 2002.

DISCUSSION AND RECOMMENDATIONS

Public Law 2002, Chapter 27, directs the Commission to summarize certain data on part-time instructional staff and prepare a report to the Senate and Assembly Education Committees. This report must include a recommendation concerning the establishment of minimum salary and benefit provisions for part-time instructional staff at New Jersey's public colleges and universities. Following receipt of this report, the Senate and Assembly Education Committees will hold a joint public hearing on the data and recommendations it presents and other related matters.

The Commission has determined that the institutional survey data it has collected at this time does not provide adequate empirical support for the Commission to recommend, with confidence, minimum compensation levels for part-time instructional staff. It is clear that additional research is necessary to determine minimum salary and benefit provisions for adjuncts, part-time faculty members, and part-time lecturers. The Commission finds further that the statute touches upon more extensive matters relative to faculty roles and rewards that cannot effectively be separated from an examination of salaries and benefits. Such matters are outlined below.

The Commission recommends that the Legislature consider a broader analytical framework to develop a rational long-term policy that would comprehensively address the matter of fair compensation for part-time instructional staff. For example, in addition to the information already summarized herein, the Legislature should consider:

- Institutional information revealing the internal faculty compensation process;
- External market information from other jurisdictions to determine benchmarks or best practices in the employment of part-time instructional staff;
- Feedback from the institutions regarding the external market forces that justify the current reward structure;
- Guidelines regarding the definition and deployment of part-time faculty, adjuncts, and part-time lecturers;
- Comparative information examining national practices and trends in the employment of part-time instructional staff.

Tremendous variation exists among institutions regarding the manner in which they hire and employ part-time instructional staff. The Commission notes that UMDNJ employs about one-half of all part-time instructional staff in public colleges and universities. That institution compensates part-time faculty on the basis of their faculty rank, years of service, and market conditions. Practices may differ though, at the other colleges and universities. They may use different criteria to determine compensation. There also exists a need to compare New Jersey's part-time faculty compensation practices to those of other states and gather additional information that the statute does not explicitly require. This would facilitate the establishment of long-term policy for part-time instructional staff compensation. The Commission suggests that the Legislature and the Commission staff work together to develop these important lines of inquiry.

In response to the immediate statutory requirement for recommendations concerning minimum salary and benefit provisions for part-time instructional staff at New Jersey's public colleges and universities, the Commission's recommendations follow below.

Salary: New Jersey has a rich and diverse group of public colleges and universities spread across all regions of the state. Personnel decisions appropriately reside at the institutional level. Employee salaries reflect varying professional responsibilities, institutional needs and priorities, market conditions, and collective bargaining where applicable.

As indicated in the above introduction, a distinction exists between part-time and adjunct faculty members. Qualitatively, part-time faculty members have some or all of the same responsibilities as their full-time colleagues – albeit proportionately to the amount of time they work. As a guiding principle, the Commission recommends that part-time faculty who perform the same duties as similarly employed full-time faculty should be compensated fractionally based upon the full-time salary scale. Specific implementation of that principle would differ among institutions, according to varying professional qualifications and salary ranges.

Adjunct faculty, however, do not typically perform the same responsibilities as full-time faculty, and the compensation principle based proportionately upon full-time salary ranges does not logically apply. Compensation for adjuncts should generally be determined based upon their assigned responsibilities, varying institutional needs, cost of living, market conditions, and collective bargaining where applicable. The Commission deems it especially important that compensation for adjunct faculty reflect the professional responsibilities of employees at an institution. For example, an institution may hire some adjunct faculty solely to teach a course. Other adjuncts may teach a course and be assigned committee work, advise students, or assume additional responsibilities. Their compensation should reflect their specific duties.

For the few part-time instructional staff members who are classified as part-time lecturers, there is no common definition among the three institutions that use the term. In some cases, part-time lecturers appear to perform jobs similar to those of part-time faculty. When that is the case, the part-time faculty compensation principle should apply

to lecturers also. In cases where a part-time lecturer performs duties more similar to those of an adjunct faculty member, the guiding principle for adjuncts should apply.

Benefits: Minimum benefit provisions currently exist for part-time instructional staff members by virtue of federal and state requirements for social security and other programs mentioned earlier in this report. The Commission recommends that adjustments to health benefits for part-time state employees should also apply to part-time instructional staff at public colleges and universities. The provision of minimum required state health care benefits for part-time instructional staff should be consistent with the benefits afforded to other part-time state employees. The Commission recommends that any additional benefits be determined by individual institutions and collective bargaining agreements where applicable.

*UMDNJ used a flat percentage rate to calculate the value of benefits rather the actual dollar value.

Credit information was not available for faculty who have some noninstructional assignment.

Credit information was available for only a portion of UMDNJ faculty.

Credit information was not available for all part-time faculty at Kean.

Note: The grand total figures for compensation per credit load on adjuncts and part-time faculty exclude UMDNJ.
