

New Jersey Department of Transportation
CONSTRUCTION ADVISORY

NUMBER: 7	Materials Certifications Delivery Date	10/19/11
CATEGORY: Materials		

Subsection 106.07 of the 2007 Standard Specifications requires that Materials Certifications indicate the shipment date and method of shipment.

Because Material Certifications must be notarized, they are often prepared in advance of actual delivery with an anticipated delivery date. Shipments may be delayed and fabricators are required to issue new Materials Certifications if the delivery date does not match the certification date.

Material Certifications are acceptable if the certification's shipment date simply states "refer to the bill of lading" rather than providing a specific date.
