

3. List of all **new and revised items** since the previous submission (note in the transmittal memo if there are none). With any new non-standard item, a complete specification electronic file, hard copy and a set of the associated plans and details covering that item shall be submitted directly to the respective SDG(s) associated with that item.

With their final verification response, the respective SDG(s) will also submit the completed electronic file for their portion. When the full verification has been completed, including resolution of any comments during the verification process, the QATL will advise the Project Manager that completion of the Master Special Provisions can proceed. The QAR Unit or in house Production Team will contact the BCAS as required to provide the latest federal wage rate call outs. The QAR Unit or in house Production Team will then provide one Master Special Provisions to the Project Manager for submission with the PS&E package to the BCAS. The Master Special Provisions will be developed combining all the inputs from the various SDG(s) as well as deleting all hidden text and SI specification text that does not apply to the project.

#### **For Non-Standard Projects**

In general, all of the above requirements shall apply, however, the Project Manager or lead unit responsible for the project shall contact the QAR Unit in advance of any submission to develop any warranted revisions to the requirements and/or procedures to complete an individual project or a group of similar type projects such as projects that are advertised/awarded by Authority Agencies or local governments.

For Private Developer projects, the Bureau of Major Access Permits may directly request review of the specifications by the appropriate SDG(s). For Roadway involvement it would be sent to the BQMS Configuration Management Unit.

### **4.3.3 Construction Cost Estimate (Engineer's Estimate)**

#### **4.3.3.1 Preparation of Construction Cost Estimate**

The Designer shall prepare the Construction Cost Estimate (also known as the Engineer's Estimate) to be submitted at the Design Submission according to the Department's publication "Construction Cost Estimation Preparation Manual for Final Engineer's Estimates". This publication is available on the NJDOT Website or can be acquired by contacting the Engineering Documents Unit.
