**All About New Jersey!**

Sweet Corn is in season in the summer, during the months of July, August, and September.

**A Look Inside the NJ - Sweet Corn Business**

**History**

Corn, member of the grass family, it was first domesticated from a wild grain several thousand years ago by Aztec and Mayan Indians in Mexico and Central America. Eventually, corn’s popularity spread to North America. By the time the first European settlers arrived on this continent, corn was the chief food crop of the native Indians.

- HS: The Science of Popcorn

**How Does It Grow:**

All the corn varieties can be divided into four basic groups: field corn, sweet corn, popcorn and ornamental corn. Corn is typically pollinated by the wind, having both male (tassels) and female (silks and ear) flowers. Pollen from the tassels needs to land on the silks in order to create a good crop.
