	<b>Summary of Changes</b>
June 11, 1999 Version 1.0	<ul> <li>Added ability for an ESP to request a secondary service of receiving Summary level Interval information for Pennsylvania (See Notes section for description of service). New features include use of a LIN05 value "SI" and use of an account level REF segment "17". If secondary service is not requested, and interval data exists for the account, the ESP will receive interval data and its related summary data in a single transaction (867IU). If the code is sent, the ESP will receive summarized data only on a monthly basis (867IU). Note: This option may not be offered at the account level by all LDCs – some LDCs may only offer it for all customers of an ESP.</li> <li>Added clarification that Rockland Electric's system maintains the duplicate bill and notice to third party.</li> <li>Transaction is considered FINAL in Pennsylvania.</li> </ul>
June 29, 1999	Issued as FINAL for New Jersey.

	General Notes			
One Account per 814	One customer account per 814.			
Tracking number on Request and Response transactions  On the request, the LIN01 is a unique tracking number for each line item (LIN) transaction. This number must be unique over all time, and is assigned by the series transactions. This number must be returned on the response transaction reject), in the same element (LIN01).				
Multiple LINs	<ul> <li>There may be multiple detail LIN loops for each customer account.</li> <li>It is important that the sender order the LIN loops in the order they would like them processed for all primary services.</li> <li>Refer to the LIN segment within this document for a better understanding of primary and secondary services.</li> <li>The sender may send one service per account per 814 instead of using multiple LIN</li> </ul>			
Response per LIN	<ul> <li>segments.</li> <li>There must be one response LIN for each request LIN.</li> <li>These responses may be created and sent at different times in different 814 transaction but all LINs must be responded to within the time limits set by the respective Commission.</li> </ul>			
Rejection vs. Acceptance with Status Reason code	• A Status Reason code is different than a Rejection Reason code. The Status Reason code is used to give additional information to the receiving party (an FYI). For example, if a request for Historical Usage is sent and the transaction is valid, but historical usage is not available for that customer, the transaction is accepted and a status reason code is provided to explain that the historical usage will not be sent. If a transaction is rejected, the requester is expected to follow up and resubmit; whereas if a transaction is accepted with a status reason code, the requester is not expected to take any further action.			
LDC Definitions:	The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym:  • EDC – Electric Distribution Company (Pennsylvania, Delaware)  • LDC – Local Distribution Company (New Jersey)  • EC – Electric Company (Maryland)			
ESP Definitions:	The term ESP (Energy Service Provider) in this document refers to the supplier. Each state may refer to the supplier by a different acronym:  • EGS – Electric Generation Supplier (Pennsylvania)  • TPS – Third Party Supplier (New Jersey)  • ES – Electric Supplier (Delaware)  • ES – Electricity Supplier (Maryland)			

	Pennsylvania Notes			
Unknown LIN05 codes	<ul> <li>PA Rules:</li> <li>If an LDC receives a request for a service that the state does not support, the LDC should reject it with a REF*7G*SDE*SERVICE DOES NOT EXIST</li> <li>If an LDC receives a request for a service that the state supports, but the LDC does not the LDC should accept it, but then send a status code REF*1P*SNP*SERVICE NOT PROVIDED</li> </ul>			
Requesting Summary Only information for Interval Data (PA Only)	Every utility must provide the ability for a supplier to receive interval data at either the summary level or the detail level. The defaults vary by LDC  • PPL EU - the following describes the default interval data levels.  • If no secondary request (LIN05=SI; REF*17) is sent,  • Traditional Interval Metered Accounts (e.g., MV-90 meters) will be sent at the DETAIL level (867IU).  • Non-traditional Interval Metered Accounts will be sent at the SUMMARY level (867MU).  • Unmetered accounts will be sent at the SUMMARY level (867 MU).  • PPL does not have non-interval meters.  • If the EGS sends a secondary request for DETAIL (LIN05=SI; REF*17*DETAIL 867IU would be sent for all except unmetered accounts. This includes both the summary and detail levels.  • 867MU would be sent for unmetered accounts.  • If the EGS sends a secondary request for SUMMARY (LIN05=SI; REF*17*SUMMARY)  • 867MU would be sent for all accounts.  • PECO – the following describes the default interval data levels.  • If no secondary request (LIN05=SI; REF*17) is sent,  • For all accounts, data will be sent at the SUMMARY level (867MU).  • If the EGS sends a secondary request for DETAIL (LIN05=SI; REF*17*DETAIL • 867IU would be sent for all except unmetered accounts. - If the utility does not provide this capability at the account level, they will accept the request, but respond with a Status Reason code (1P) of SNP for "Service Not Provided".
- If the utility provides this service at the account level, but the account is not an interval account, they will accept the request, but respond with a Status Reason code (1P) of UMA for "Unmetered or non-interval account".

If Interval Detail is to be provided, the following are the plans by utility:

- BG&E For AMI/Smart metered accounts, BGE will provide 867IU if requested as stated above. For non-AMI/Smart metered accounts, no 867IU will be sent. Interval data will be provided on web; however, an 867MU will be provided for the Summary data.
- Delmarva & Potomac Edison Will provide 867IU
- PEPCO / Delmarva— Will provide 867IU for both non-AMI/Smarts Meter billed accounts and AMI/Smart Interval Meter Billed accounts. AMI/Smart Interval Billed accounts will be denoted accordingly. Additionally, PEPCO and Delmarva state if the meter being enrolled is an actively interval billed AMI SMART meter and if LIN05 "SI" is not populated on an active interval billed AMI SMART metered account, the 867IU will be sent. PEPCO will no longer support posting interval usage on the Supplier Web Portal.

#### Maryland – Handling of Historical Usage Requests:

Special Historical Usage Notes:

Maryland EDI CC 15 added support of the EDI 867 Historical Interval (HI) transaction for Maryland.

BGE – live January 2014, supports account level

Potomac Edison – TBD, will support account level

PHI (Delmarva MD & PEPCO MD) – with new CIS (est. early-mid 2015), will support account level

**BG&E Note:** For Historical Usage (HU) requests on a non-interval account, the response will be accepted and the historical usage will be provided via an 867HU. As of January 16, 2014 BGE supports EDI requests for pre-enrollment historical data. See table in above section for special response handling relative to BGE historical usage requests. **PEPCO / Delmarva Note**: Will support the 867 HI (Historical Interval Usage)

transaction set as follows:

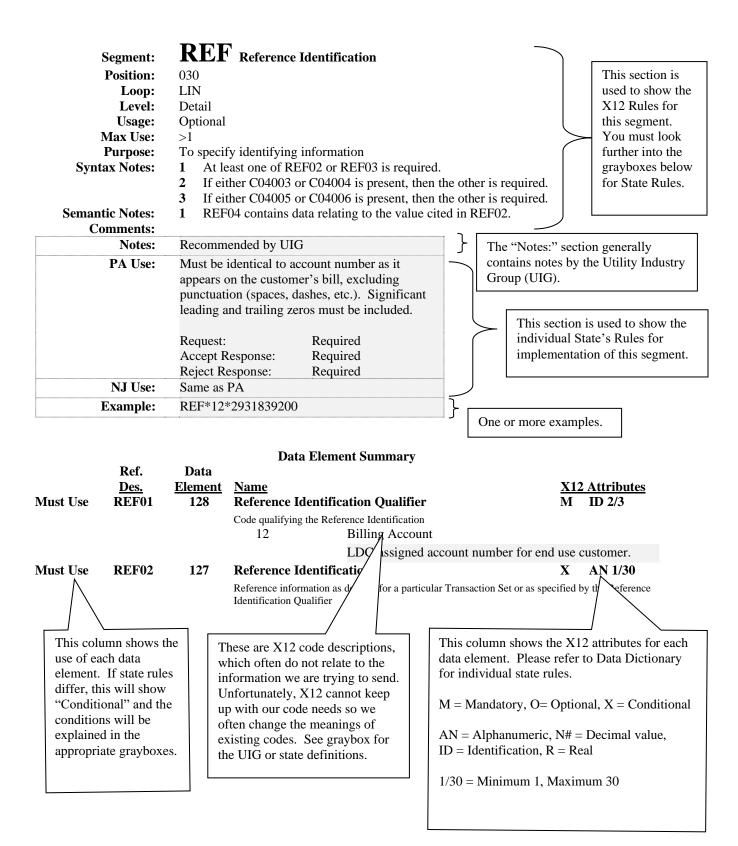

- Interval Metered Accounts The HI request will be accepted with REF\*1P=HIA and 867HI will be sent.
- Non-Interval Metered Accounts The HU request will be accepted with REF\*1P = HUA and the 867HU will be sent.

If no historical usage is available, the request will be accepted with REF\*1P = HUU and no 867 will be sent. Historical Interval readings will not be posted on the Supplier Web portal.

**Potomac Edison Note:** PE will provide an 867HU (Monthly Historical Information) for all Historical usage (HU) requests. Requests for historical interval data must be made outside of EDI.

The following fields will be sent in the 814 Historical Usage accept response transaction from the LDC to the ESP:  Service Address fields (N1*8R - N3, N4, PER segments)  Billing Address fields (N1*BT - N3, N4, PER segments)  Suppliers serving customers via the SCB bill option are required to print an additional Utility Customer Account Number on the bill. MD EDI CC68v2 addresses changes to the EDI 814 Enrollment transaction to support PC55 implementation as follows  • Add REF02 reject reason code "EAH" to REF*7G  • For use when non-PSC certified supplier attempts to enroll Energy Assistance Customer based on current information in the Utility System.  • Add REF*EA (Energy Assistance Customer) to provide the current status of the customer's Energy Assistance in the Utility System at the time of the request or business process event.  • It remains the sole responsibility of the Supplier to confirm the Energy Assistance status directly with the customer and/or the Office of Home Energy Programs (OHEP).  The REF*EA is not indicative of the customer's Energy Assistance status in the event the customer is receiving assistance for Gas commodity only or if customer moved into utility service territory and was previously receiving Energy Assistance.
MD Change Control 083 approved Historical Usage Matrix version dated February 12 <sup>th</sup> , 2024. The file named MD_Historical Usage Matrix_20240212.xlsx will be available for download from the MD PSC Website under Electricity > Working Groups > EDI Standards
SB1 regulations require utilities to provide the ability for MD residential customers to remain on SOS indefinitely, thereby making them ineligible for electric choice.  Add REF02 reject reason code "CAB" to REF*7G for use when MD supplier attempts to enroll a customer or request historical usage for a customer who opted to remain on SOS

Comments:

#### PA Use:

- Every utility must provide the ability for a supplier to receive interval data at either the summary level or the detail level. The default, except for PPL EU and PECO, is that an ESP will receive interval data at the summary and the detail level. If an ESP wants interval data at both the summary and the detail level the ESP does not need to take any action
  - For PPL EU, because nearly all customers have interval meters, the default is for the ESP to receive summary data only. If an ESP wants interval data at both the summary and detail levels, the ESP must submit "SI" and include the REF\*17\*DETAIL segment.
  - For PECO, the default is also for the ESP to receive summary data only. If an ESP wants interval data at the detail level, the ESP must submit "SI" and specify account-level versus meter-level detail via the REF\*17 segment. Please note that, unlike PPL EU, PECO does not provide interval data for billing at both the summary and detail levels; The ESP may receive either summary or detail, but not both
- If an ESP wants to receive interval data at only the summary level, the ESP must:
  - Contact the LDC to determine if the LDC supports summary level data by account or by ESP
  - If the LDC supports summary level interval data by account, the ESP must submit "SI" in the LIN05 to indicate that only summary level interval data is requested for the account.
  - If the LDC supports summary level interval data by ESP, the "SI" in the LIN05 is not used. The ESP must call the supplier interface group at the LDC to request summary level interval data. The LDC will then return summary level interval data for ALL accounts for that ESP.
  - For PPL EU, the default is summary. If an ESP wants interval data at both the summary and detail levels, the ESP must submit "SI" and include the REF\*17\*DETAIL segment.
- As stated above, PECO does not provide interval data for billing at both the summary and detail levels; The ESP may receive either summary or detail, but not both.

#### Responses to a Summary Interval Request (LIN05=SI):

- If the utility does not provide this capability at the account level, they will accept the
  request, but respond with a Status Reason code (1P) of SNP for "Service Not
  Provided".
- If the utility provides this service at the account level, but the account is not an interval account, they will accept the request, but respond with a Status Reason code (1P) of UMA for "Unmetered or non-interval account".
- If the utility provides this service at the account level, and the account is an interval account, the utility will accept this request, and in their response send a *REF\*17\*SUMMARY*.

AMT Monetary Amount (DP=Tax Exemption Percent) **Segment:** 

**Position:** 060 LIN Loop: Level: Detail Usage: **Optional** Max Use:

**Purpose:** To indicate the total monetary amount

**Syntax Notes: Semantic Notes: Comments:** 

#### PA Use:

This field is used for the non-billing party to tell the billing party the tax exemption amount that should be entered into the billing party's system in order to calculate a bill on the sender's behalf. This is required only for rate-ready LDC Consolidated billing where the LDC has loaded the ESP rates into their system, the LDC calculates the ESP charges, and places the ESP charges on the LDC bill. The following generic rules are offered to better explain the use of the segment for PA:

- Residential customers default to '1' (AMT\*DP\*1~) as 100% tax exempt unless the residence is used for business purposes or vacation home.
- Commercial customers default to '0' (AMT\*DP\*0~) being 0% tax exempt unless the customer presents a sales tax exemption certificate. Should the customer have a tax exemption percentage less than 100% but greater than 0%, the value would be reported as a decimal (AMT\*DP\*.5~). A tax exemption certificate must be secured from the customer.

It's the ESP's responsibility to ensure the value in the AMTDP is accurate based on the customer's tax status. Under Rate Ready billing, correcting inaccurate customer bills due to incorrect tax exemption is not the LDC's responsibility and in most cases requires the Supplier to rectify directly with the customer.

CE Request: Required if LDC is calculating the ESP portion of the bill

Accept Response: **Optional** 

CE Reject Response: Return on response if it was provided on the request

All other Reject Responses: Not Used

N.J Use: Same as PA Note: For Rate Ready, since rate must include taxes, ESP should always set

this to 100% tax exempt in NJ.

**DE Use:** Same as PA

MD Use: Not used – Maryland tax exemptions apply to a specific tax. Each tax has a separate AMT

segment. The current applicable tax is State Sales tax (AMT\*F7)

When REF01 is MT, the meter type is expressed as a five-character field. The first two characters are the type of consumption the last three characters are the metering interval. "COMBO" is used for a meter that records more than one measurement. Valid values can be a combination of the following values:

### Type of Consumption Metering Interval

P	C 0 11 5 11 11 11 11 11 11 11 11 11 11 11 1		· · · · · · · · · · · · · · · · · · ·

K2	Kilovolt Amperes Reactive Demand	ANN	Annual
K3	Kilovolt Amperes Reactive Hour	BIA	Bi-annual
K4	Kilovolt Amperes	BIM	Bi-monthly
K5	Kilovolt Amperes Reactive	DAY	Daily

T9	Thousand Kilowatt Hours	QTR	Quarterly

For Example:

KHMON Kilowatt Hours Per Month

K1015 Kilowatt Demand per 15 minute interval

**Other Valid Codes** 

COMBO This code is used to indicate that the meter has multiple measurements, e.g., one meter that

measures both kWh and Demand.
