Segment: AMT Monetary Amount (DP=Tax Exemption Percent)

Position: 060
Loop: LIN
Level: Detail
Usage: Optional
Max Use: >1

Purpose: To indicate the total monetary amount

Syntax Notes: Semantic Notes: Comments:

PA Implementation:

This field is used for the non-billing party to tell the billing party the tax exemption amount that should be entered into the billing party's system in order to calculate a bill on the sender's behalf. This is required only for rate-ready LDC Consolidated billing where the LDC has loaded the ESP rates into their system, the LDC calculates the ESP charges, and places the ESP charges on the LDC bill. The following generic rules are offered to better explain the use of the segment for PA:

- Residential customers default to '1' (AMT*DP*1~) as 100% tax exempt unless the residence is used for business purposes or vacation home.
- Commercial customers default to '0' (AMT*DP*0~) being 0% tax exempt unless the customer presents a sales tax exemption certificate. Should the customer have a tax exemption percentage less than 100% but greater than 0%, the value would be reported as a decimal (AMT*DP*.5~). A tax exemption certificate must be secured from the customer.

It's the ESP's responsibility to ensure the value in the AMTDP is accurate based on the customer's tax status. Under Rate Ready billing, correcting inaccurate customer bills due to incorrect tax exemption is not the LDC's responsibility and in most cases requires the Supplier to address directly with the customer

When REF01 is MT, the meter type is expressed as a five-character field. The first two characters are the type of consumption, the last three characters are the metering interval., except for the combination meter that records more than one measurement and is noted as "COMBO". Valid values can be a combination of the following values:

Consumption	Metering Interval		
Kilowatt Demand	Nnn	Number of minutes from 001 to 999	
Kilovolt Amperes Reactive Demand	ANN	Annual	
Kilovolt Amperes Reactive Hour	BIA	Bi-annual	
Kilovolt Amperes	BIM	Bi-monthly	
Kilovolt Amperes Reactive	DAY	Daily	
Kilowatt Hour	MON	Monthly	
Thousand Kilowatt Hours	QTR	Quarterly	
	Kilovatt Demand Kilovolt Amperes Reactive Demand Kilovolt Amperes Reactive Hour Kilovolt Amperes Kilovolt Amperes Reactive Kilowatt Hour	Kilowatt Demand Nnn Kilovolt Amperes Reactive Demand ANN Kilovolt Amperes Reactive Hour BIA Kilovolt Amperes BIM Kilovolt Amperes Reactive DAY Kilowatt Hour MON	

For Example:

KHMON Kilowatt Hours Per Month

K1015 Kilowatt Demand per 15 minute interval

Other Valid Codes

COMBO This code is used to indicate that the meter has multiple measurements, e.g., one meter that

measures both kWh and Demand.
