Based on the tube layout included in the drawings, our own internal evaluation and the site boundaries of the Geotube laydown areas, there is not enough available space to fit all the dredge quantities in the designated areas. Is the expectation to perform interim loadout to add additional space for geotextile tubes? Or can the Geotube Laydown area(s) be expanded?

Response to Question No. 26:

Please refer to the answer to Question 25.

Question No. 27:

Geotube Laydown Areas:

It appears that the geotextile tube header manifold, polymer system or auxiliary equipment was not included in the drawings. Can the geotextile tube header manifold, polymer equipment and other auxiliary equipment be staged and placed outside the Geotube laydown boundaries?

Response to Question No. 27:

Adequate space has been provided at the Geotube laydown areas for the geotextile tube header manifold, polymer system or auxiliary equipment. The geotextile tube header manifold must be within the limits of the containment area defined by the construction barrier curb. Although the polymer system or auxiliary equipment may be located outside the containment area, they must be within the limits of fencing of the Geotube laydown areas.

Question No. 31:

Municipal Parking Lot:

DRG No DRG-57 has 3 light poles in the middle of the laydown area. Are these poles to be removed prior to the liner being installed and then replaced under a different contract? It is important that these poles be removed because the drawings shows the geotextile tubes placed over the light pole locations.

Response to Question No. 31:

The light poles may not be removed.

Question No. 32:

Dredge Volume:

Is there a penalty if all dredge material is not dredged due to lack of space on the laydown pads? Or, is it expected that all material needs to be dredged even if that requires an interim loadout of material?

Response to Question No. 32:

Interim loadout may be required based on contractor's workplan and schedule.

Question No. 33:

Geotube Laydown Area:

Who will determine when that laydown area is "full" and no more material can be dewatered at that laydown site and a loadout will be required before continuing?

Response to Question No. 33:

Refer to the answer to question 32.

Question No. 34:

Transportation and Loadout:

Please provide a schedule for an interim loadout of a laydown area? Tons per day and/or total duration of the loadout operations? This is required for our production scheduling to meet the substantial completion date.

The contractor is responsible for providing a complete dewatering cell prior to filling.

Questions Asked By: H & L Contracting, LLC

Question No. 36:

Shoal:

Regarding question #20 that was answered in Addendum #3, which pertained to the apparent shoal at station 2+88 of Beach Creek 1 Channel; the question was whether or not that shoal exists, not whether it is part of the area to be dredged. The existence of this shoal may have impacts to the contractors' equipment accessibility. Please verify if the shoal exists as depicted.

Response to Question No. 36:

Beach Creek 1 is very wide at the location which usually provides adequate room for transit past any partial shoaling that may be present. However, this inlet is highly dynamic, NJDOT makes no representations regarding navigability for any specific vessel now, or in the future. Safe navigation and transportation of equipment to the site is the responsibility of the contractor.

Question No. 37:

Concrete Barrier:

Regarding question #15, it was answered that dewatering facilities will remain. Will the contractor have to leave the concrete barrier curbs behind, or can they be reclaimed once the material has been sufficiently dewatered?

Response to Question No. 37:

Refer to Addendum #3, changes made to the Plans, Sheets 56, 57, and 58.
