RE: Lead in Water Sampling

New Jersey Department of Children and Families (NJDCF) Monmouth Campus

1076 Wayside Road Ocean, New Jersey

Whitman Project #16-11-49T

Dear Mr. Wybraniec:

The potable drinking water sampling, which consisted of 12 cold faucet samples and a laboratory blank sample, was conducted by Lisa Scarpelli of Whitman on February 20, 2017. First draw samples were collected from all sampling locations, in accordance with the USEPA and NJDEP protocols. All water samples and associated laboratory blanks were transported to Precision Analytical Services, Inc. located in Toms River, New Jersey for analysis. All sample analysis was performed utilizing the USEPA test method "Lead and Copper in Water by Furnace AAS (EPA 200.9)".

The samples collected from the Monmouth Campus were found to be either not detected (ND) or below the action level of 15.0 ppb established by the USEPA and the NJDEP. Sampling results are summarized below and are provided as an attachment to this letter.
