Breakout Table Discussion Questions

1. Which initiatives, projects and/or programs presented in the Scoping Document should the state prioritize for funding? Why?

2. Are there other funding priorities not listed in the Scoping Document that should be considered? Why?

Г

3. What sorts of changes do you think need to happen to help the State both make progress toward decarbonizing our transportation sector as well as improve conditions in environmental justice communities? What sorts of programs or interventions do you think would support/accelerate those changes?

4. More than a dozen other States or regions within the US have some sort of Green Bank mechanism. Do you think establishing such a mechanism in New Jersey would be beneficial? (e.g., Are the private capital markets providing adequate funding support for clean energy-related investment in the state? Where do you see the biggest financing gaps? Where are things working best?)

5. What areas of the clean energy/clean tech economy provide NJ with the best opportunities for job creation? What programs/interventions do you think the State needs to take to strengthen its clean tech innovation ecosystem?

6. How should we measure the success of the projects once they are implemented? What metrics are most effective? What would success look like to you?

٦

7. Any other feedback?
