\* includes Sussex County surficial and bedrock digital maps  
 \*\* includes Southern and Central New Jersey surficial digital map and four quadrangle digital maps  
 \*\*\* includes Northern New Jersey surficial digital map and twelve quadrangle digital maps  
 # includes eight quadrangle digital maps  
 ## includes one offshore geologic map (Barnegat)  
 ### includes one offshore geologic map (Brigantine) and six quadrangle digital maps

^ includes Potomac Formation water availability study  
 ^^ includes one offshore geologic map (Cape May)  
 ^^ includes geologic map of Cape May County  
 + includes one offshore geologic map (Wildwood)  
 ++ includes one karst susceptibility map (Newton West)  
 +++ includes one offshore geologic map (Ocean City)  
 ~ includes one karst susceptibility map (Newton East)

Geologic maps show the distribution of bedrock formations and overlying surficial deposits at the surface and in the subsurface. They provide foundational data for the management of water resources, land use and natural hazards. All maps produced under this program in New Jersey are available free-of-charge at the New Jersey Geological and Water Survey website.
