NEW JERSEY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND ENERGY

The mission of the New Jersey Department of Environmental Protection and Energy is to conserve, protect, enhance, restore and manage our environment for present and future generations. We strive to prevent pollution; ensure the efficient use of safe, environmentally sound and reliable energy resources; provide opportunities for recreation and enjoyment of natural and historic resources; and promote a healthy and sustainable ecosystem.

STATE MAPPING ADVISORY COMMITTEE

The State Mapping Advisory Committee was established in 1979 through a Governor's Executive order which recognized the need for a statewide coordinating body. Its purpose is to facilitate communication and cooperation between mapping professionals, to minimize duplication of effort, to determine mapping priorities for the State of New Jersey, to communicate those priorities to the USGS, and to facilitate the realization of mapping priorities in the state.

New Jersey Geological Survey Reports (ISSN 0741-7357) are published by the New Jersey Geological Survey, CN-427, Trenton, NJ 08625. This report may be reproduced in whole or part provided that suitable reference to the source of the copied material is provided.

Additional copies of this and other reports may be obtained from:

INTRODUCTION

As we have come to recognize the lasting environmental impacts of human activities, the need to document and review past land use patterns and practices has become critical. Environmental awareness and regulatory requirements necessitate that government agencies, housing development companies, industrial developers, engineers, and environmental groups have historical information at their fingertips. One of the best ways to evaluate prior land uses is through historical aerial photography.

While we have seen the use of aerial photos more than double in the past ten years, information on availability of photos has remained hard to find. This directory was prepared in conjunction with the New Jersey State Mapping Advisory Committee to fill a pressing need for a complete listing of New Jersey aerial photography.

The entries were compiled from questionnaires sent to all aerial photo companies we know of operating in New Jersey and to Federal, State and County agencies likely to hold aerial photos. Inquiries on particular negatives or photo sets should be directed to the sources indicated in the listings.

The directory is organized by geographic area and date of photography. While most of the information is self-explanatory, the following points should be noted:

- 1) The source (column 3) refers to the "Sources of New Jersey Aerial Photography" listings (pages 2 and 3).
- 2) Scales are nominal and may be slightly different than listed due to variation in altitude and pitch and roll of the aircraft.
- 3) For film type, B/W stands for black and white, Color for natural color, and IRC for infrared color.
- 4) In many cases the source has photography available for examination only or has an enlarged product for making blue-line copies. If original-size or custom copies are needed, they would have to be prepared from the original negatives.

We realize that some photography may not have been included and would appreciate new or unintentionally omitted photography being brought to our attention for inclusion in future editions. Additional photography is listed in the federal Aerial Photography Summary Record System (APSRS), maintained by the U. S. Geological Survey. For further information on APSRS or New Jersey aerial photography contact:
