**Subject:** [EXTERNAL] 2019 Draft Energy Master Plan  
**Date:** Monday, September 16, 2019 7:44:49 AM

---

New Jersey has the economic power and capability of committing to a permanent halt of fossil fuel use as well as a halt to the proposed pipelines.  
We should lead the country in the goal of using clean renewable energy sources by 2050.

Our state is adversely affected more than others. It is our impoverished communities that will suffer the most during these changes. We should set milestones on the way to our reliance on renewable energy milestones. Ensuring that we can keep track of our progress and adjust accordingly. I've read the plan in full and it lacks the full details that we need. We need more details on how we will do this and how we will provide jobs that will work toward clearer goals on clean energy. Our first step is saying no to the fossil fuel industry.

New Jersey is home and we have to do better. I have a niece and nephew that deserve better than the effort we are putting into this.

So lets do better.
