FLU & YOUR TEEN
KNOW THE RISKS

VACCINE: THE BEST PREVENTION
The single best way to prevent the flu is to get vaccinated every year. While other preventative measures (such as hand washing) are important, the flu vaccine is your best bet.

YOU CAN AFFORD TO GET THEM VACCINATED
Most insurance plans cover the cost of flu vaccine. If you are not insured, your teen (through 18 years of age) can get the vaccine for free through the Vaccines for Children Program.

NO ONE HAS TIME TO GET SICK
Most teens who get the flu are sick for over a week. That’s more than 7 days without class, sports, club practices, and social functions. They simply can’t afford to get sick.

FLU SPREADS EASILY
Close contact such as in classrooms, sports events, assemblies, and club meetings make flu easy to spread at school.

IT CAN HAPPEN TO YOUR TEEN
Lack of sleep and busy schedules among other lifestyle factors can weaken immune systems, making teens vulnerable to flu. Their lifestyle puts them at unique risk.

FLU IS SERIOUS
Even healthy teens get the flu and it can be very serious. Flu is not the common cold. Every year, healthy young teens become severely sick and some even die from the flu.

Call your healthcare provider today to schedule an immunization appointment!

KNOW THE RISK • KNOW THE FACTS • GET VACCINATED
There are other vaccines your teen may need to stay healthy, including human papillomavirus (HPV), meningococcal conjugate (MenACWY), and tetanus diphtheria and acellular pertussis (Tdap). For more information talk to your healthcare provider.
