

Report Highlight:

- A mosquito pool collected from Atlantic County tested positive for Eastern equine encephalitis (EEE) in week 25. This is the earliest detection of EEE in mosquitoes in at least 8 years.
- A mosquito pool collected from Bergen County tested positive for Jamestown Canyon virus (JCV) in week 23.
- There have been no WNV positive cases detected in humans, mosquitoes, or animals this season.
- The number of tick related ED visits in 2020 is significantly below seasonal trends observed in past 5 years.

1. Human Testing

New Jersey Administrative Code (N.J.A.C.) Title 8 Chapter 57 mandates public health reporting of specified vector-borne diseases to prevent further disease spread.

Table 1.1 Human Cases^a

Mosquito-borne diseases			Tickborne Diseases		
	2020 ^b	2019		2020 ^b	2019
Chikungunya	3	15	Anaplasmosis	5	142
Dengue	2	73	Babesiosis	7	236
Eastern equine encephalitis	-	4	<i>Borrelia miyamotoi</i>	1	16
Jamestown Canyon	-	-	Ehrlichiosis	2	142
Malaria	11	102	Lyme disease	383	3587
West Nile	-	8	Powassan	-	4
Zika	3	12	Spotted fever group rickettsioses	3	208

^a Data for 2020 reflect confirmed and probable cases that have been approved by NJDOH. This does not include cases under investigation. All 2020 numbers are preliminary and are subject to change.

^b Cumulative through week 25: June 14-20, 2020.

2. Mosquito Testing

The New Jersey Department of Health Public Health and Environmental Laboratories (PHEL) and the Cape May County Department of Mosquito Control Bio-safety Level 3 Laboratory (CMBSL3) perform arboviral testing on mosquito pools collected by county mosquito control agencies throughout New Jersey.

West Nile virus (WNV):

- A total of 859 mosquito pools from 16 counties (Atlantic, Bergen, Cumberland, Essex, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Sussex, Union and Warren) have been tested for WNV.
- No positive WNV pools have been identified in 2020. In 2019 the first WNV positive mosquito pool was identified in week 22 in Passaic County.

**Test results may be incomplete; counties submit pools for testing on specific weekdays. Mosquito testing data reflects test results received from PHEL, CMBSL3 and US Army Public Health as of June 24, 2020*

WNV Positive Mosquito Pools

County	Week 25		Cumulative Total (week 25)	
	2020*	2019	2020*	2019

Warren				
Total	-	1	-	1

Week 25: June 16-22, 2019; June 14-20, 2020

Eastern equine encephalitis virus (EEE)

- A total of 847 mosquito pools from 16 counties (Atlantic, Bergen, Cumberland, Essex, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Salem, Somerset, Sussex, Union and Warren) have been tested for EEE.
- The first positive pool was detected in week 25 (Atlantic County). This is the earliest detection of EEE in mosquito pools in at least 8 years.
- The positive result was in *Culiseta melanura* mosquitoes.
- In 2019, the first EEE-positive mosquito pool was reported from Monmouth County in week 27.

EEE Positive Mosquito Pools

County	Week 25		Cumulative Total (week 25)

^a St. Louis encephalitis virus (SLE), Jamestown Canyon Virus (JCV), La Crosse encephalitis virus (LAC), Chikungunya virus (CHIKV), Dengue virus (DENV), Zika Virus (ZIKV)
 Numbers in white columns represent number of pools tested to date in 2020
 Numbers in green shaded columns represent positive pools in 2020

Jamestown Canyon virus (JCV):

- A mosquito pool collected on June 4th (week 23) in Bergen County tested positive for Jamestown Canyon virus at PHEL. The positive pool was *Aedes cantator* species.
- In 2019, five mosquito pools from 4 counties tested positive for Jamestown Canyon virus. Positive pools were identified in Sussex, Bergen, Burlington and Salem counties.
- NJ reported its first and only human case of Jamestown Canyon virus in 2015 in a Sussex County resident.

La Crosse encephalitis virus (LAC):

- No positive La Crosse virus pools have been identified in 2020.
- In 2019, a mosquito pool collected in Passaic County (week 22) tested positive for La Crosse virus at PHEL.
- There have not been any human La Crosse virus cases reported in at least the past 20 years.

3. Equine/Avian /Other Animal Testing

Equine testing for WNV and EEE is conducted at the New Jersey Department of Agriculture's Animal Health and Diagnostic Laboratory.

- No animals have tested positive for WNV or EEE in 2020.
- Routine avian testing has been discontinued but is available upon request at PHEL.

WNV/EEE Positive Test Results

	Week 25		Cum. Total (Year)	
	2020*	2019	2020*	2019
Equine (EEE)

- No LAC activity

5. Syndromic Surveillance for Tick-related Emergency Department Visits

EpiCenter is a syndromic surveillance system developed and maintained by Health Monitoring Systems, Inc, for monitoring by health departments in the United States. New Jersey's EpiCenter receives real time Emergency Department (ED) data from 78 acute care and satellite health (99 percent reporting) facilities statewide. The system collects "chief complaint" information and limited patient registration data from existing ED computer systems.

The chart below represents NJ residents seen at emergency departments statewide with a tick-bite complaint or signs/symptoms associated with a reported tick-bite. Tick-related ED visits occur throughout the year with peak number of visits in the summer months and a smaller peak in the fall weeks when adult *Ixodes scapularis* (blacklegged ticks) are active.

In week 25 and throughout the season, the number of ED visits is significantly lower than the 5-year average. ED visits for many illnesses are lower than expected this year as a result of the COVID-19 pandemic. Tick-related visits started to increase after week 19 when state parks were reopened.

Data reflects ED visits downloaded from EpiCenter as of June 23, 2020
