

**Report Highlight:**

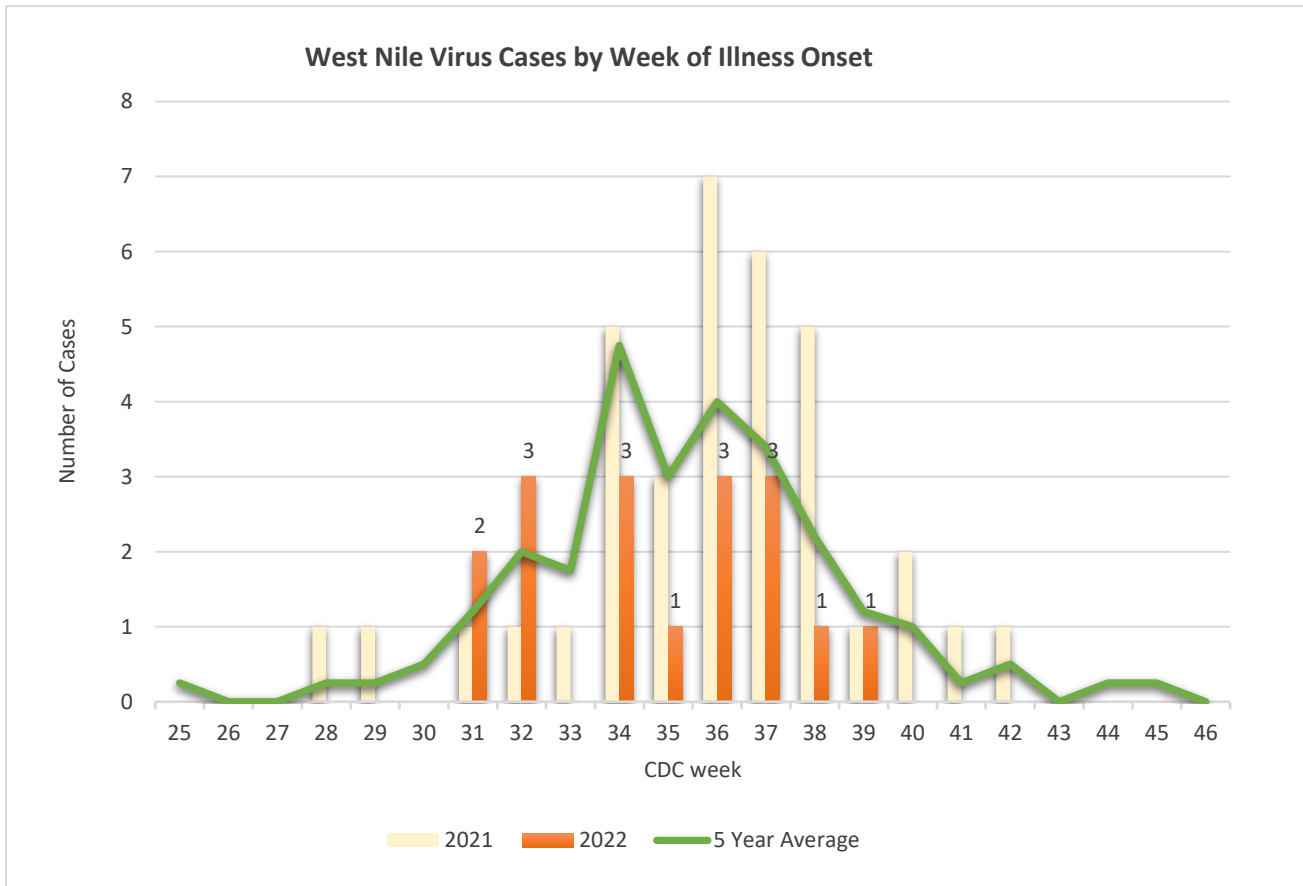

- This is the final week of mosquito testing for the season. If there are no additional arbovirus-positive results or other notable activity, this will be the final weekly surveillance report. An annual summary report will be posted in December/January.
- There are 17 West Nile Virus (WNV) human cases (11 neuroinvasive) in 2022 from Bergen (3), Burlington (1), Camden (3), Middlesex (1), Monmouth (4), Morris (1), Ocean (2), & Union (2) counties. 1 presumptive viremic blood donor was detected in Middlesex County.
- No pools have been submitted for testing in Week 44. There have been 607 WNV positive pools this year.
- The number of tick-related ED visits continued to increase this week, consistent with the emergence of adult deer ticks, and are significantly above the 5-year average.

**1. Human Cases**

N.J.A.C.8:57 mandates public health reporting of communicable diseases. 2022 data reflect cases that have been approved by NJDOH and do not include cases under investigation. All 2022 numbers are preliminary and subject to change.

	Mosquito-borne diseases		Tickborne Diseases/Conditions		
	2022	2021		2022	2021
Chikungunya	1	4	Alpha-gal syndrome	106	-
Dengue	21	12	Anaplasmosis	65	202
Eastern equine encephalitis	-	-	Babesiosis	196	258
Jamestown Canyon	-	2	<i>Borrelia miyamotoi</i>	6	16
Malaria	37	71	Ehrlichiosis ( <i>chaffeensis, ewingii</i> )	79	77
West Nile	17	36	Lyme disease*	196	3,518
Zika	-	-	Powassan	-	-
			Spotted fever group rickettsioses	16	39
			Tularemia	1	4

\* Lyme disease surveillance has transitioned to a laboratory-only surveillance approach in 2022; as such, case reporting is delayed.

## 2. Mosquito Testing

The New Jersey Department of Health Public Health and Environmental Laboratories (PHEL) and the Cape May County Department of Mosquito Control Biosafety Level 3 Laboratory (CMBSL3) perform arboviral testing on mosquito pools collected by county mosquito control agencies throughout New Jersey.

### West Nile virus (WNV):

- A total of 7585 mosquito pools from 21 counties have been tested for WNV.
- No pools tested positive for WNV in Week 44. There have been 607 positive WNV pools so far this year, detected in all counties.
- The positive pools were detected in *Aedes albopictus* (14), *Ae. canadensis*(1), *Ae. cantator*(1), *Ae. japonicus* (11), *Ae. triseriatus* (2), *Ae. vexans* (1), *Anopheles punctipennis* (1), *An. quadrimaculatus* (1), *Coquillettidia perturbans* (1), *Culex sp.* (76), *Cx. erraticus* (2), *Cx. pipiens* (19), *Cx. pipiens/quinqüefasciatus/restuans species mix* (48), *Cx. pipiens/restuans/salinarius species mix* (426), and *Cx. restuans* (3).
- The first WNV positive mosquito pool (*Ae. cantator*) was detected in week 22 from Burlington County.

\*Test results may be incomplete; counties submit pools for testing on specific weekdays. Mosquito testing data reflects test results received from PHEL and CMBSL3 as of November 10, 2022

### WNV Mosquito Pool Testing

County	Week 44 Positive Pools		Cumulative Pos. Total (Week 44)		# Pools Tested 2022*
	2022*	2021	2022*	2021

### West Nile Virus Positive Mosquito Pools, NJ (2021-2022)

## Eastern equine encephalitis virus (EEE)

- A total of 7426 mosquito pools from all 21 counties have been tested for EEE.
- One EEE positive mosquito pool was identified in Burlington County in Week 43, in a *Cs. melanura* pool.
- One EEE positive mosquito pool was identified in Atlantic County in Week 42, in a *Cs. melanura* pool.
- One EEE positive mosquito pool was identified in Morris County in Week 33, in a *Culex sp.* pool.
- In 2021, the first positive mosquito pool was detected in Week 26 from Gloucester County.

### EEE Mosquito Pool Testing

County	Week 44 Positive Pools		Cumulative Pos. Total (Week 44)		# Pools Tested
	2022*	2021	2022*	2021	
Atlantic			1	9	488

Week 44: Oct 31-Nov 6, 2021; Oct 30-Nov 5, 2022

### EEE Virus Positive Mosquito Pools, NJ (2021-2022)

**Other viruses:**

Mosquito pools from 21 counties have been tested for other arboviruses. Four pools tested positive for JCV.

**Cumulative 2022 Mosquito Pool Testing (Other Viruses<sup>a</sup>)**

County	SLE		JCV		LAC		CHIKV		DENV		ZIKV	
	Pools	Pos	Pools	Pos	Pools	Pos	Pools	Pos	Pools	Pos	Pools	Pos

<b>Total</b>	<b>7426</b>	<b>-</b>	<b>7237</b>	<b>3</b>	<b>137</b>	<b>-</b>	<b>26</b>	<b>-</b>	<b>26</b>	<b>-</b>	<b>26</b>	<b>-</b>

<sup>a</sup> St. Louis encephalitis virus (SLE), Jamestown Canyon Virus (JCV), La Crosse encephalitis virus (LAC), Chikungunya virus (CHIKV), Dengue virus (DENV), Zika Virus (ZIKV)  
 Numbers in white columns represent number of pools tested to date in 2022  
 Numbers in green shaded columns represent positive pools in 2022

**Jamestown Canyon virus (JCV):**

- Three JCV-positive pools have been detected in 2022 from 2 counties (Bergen, Sussex), compared to 8 JCV-positive pools detected in 2021 in 5 counties (Atlantic, Camden, Essex, Gloucester, Sussex).
- Jamestown Canyon virus has not been detected in humans in 2022. NJ reported 2 human JCV cases in 2021 in Sussex County (week 18) and in Essex County (Week 37). The first NJ JCV case was reported in 2015 in Sussex County.
- The first mosquito pool (*Ae. cantator*) positive for JCV was from Bergen county in Week 22.

**JCV Positive Test Results**

County	Week 44		Cum. Total (Week 44)	
	2022*	2021	2022*	2021
Atlantic				1
Bergen			2	
Camden				3
Essex				1
Gloucester				2
Sussex			1	1
<b>Total</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>8</b>

Week 44: Oct 31-Nov 6, 2021; Oct 30-Nov 5, 2022

### 3. Equine/Avian /Other Animal Testing

Equine testing for WNV and EEE is conducted at the New Jersey Department of Agriculture's Animal Health and Diagnostic Laboratory.

- A blue jay tested positive for WNV in Week 41 in Passaic County.
- A red-tailed hawk tested positive for WNV in Week 36 in Bergen County.
- Four raptors tested positive for WNV in Week 34: a Cooper's hawk in Morris County and red-tailed hawks in Morris, Essex, and Somerset counties.
- A red-tailed hawk tested positive for WNV in Week 31 in Somerset County.
- No animals have tested positive for EEE in 2022.
- Routine avian testing has been discontinued but is available upon request at PHEL.

WNV/EEE Positive Test Results

	Week 44		Cum. Total (Week 44)	
	2022*	2021	2022*	2021
Equine (EEE)				3
Equine (WNV)				
Avian (WNV)			7	13
Other				

Week 44: Oct 31-Nov 6, 2021; Oct 30-Nov 5, 2022

## 5. Syndromic Surveillance for Tick-related Emergency Department Visits

EpiCenter is a syndromic surveillance system developed and maintained by Health Monitoring Systems, Inc, for monitoring by health departments in the United States. New Jersey’s EpiCenter receives real time Emergency Department (ED) data from 78 acute care and satellite health (99 percent reporting) facilities statewide. The system collects “chief complaint” information and limited patient registration data from existing ED computer systems.

The chart below represents NJ residents seen at emergency departments statewide with a tick-bite complaint or signs/symptoms associated with a reported tick-bite. Tick-related ED visits occur throughout the year with peak number of visits in the summer months and a smaller peak in the fall weeks when adult *Ixodes scapularis* (blacklegged ticks) are active.

In Week 44, the number of tick-related ED visits continued to increase and is above the 5-year average.

## New Jersey EpiCenter: Tick-Related Emergency Department Visits

## New Jersey EpiCenter: Tick-Related Emergency Department Visits by Region (2022)

Data reflects ED visits downloaded from EpiCenter as of November 10, 2022
