April 2020
Protecting Your Baby & Yourself Through Vaccination

Immunizations for Infants and Expectant Moms

Whether you are thinking about becoming pregnant with your first child, or planning on having another child, it is important to make sure that you and your baby are up-to-date on all of your vaccinations.

**DURING PREGNANCY**

Speak with your provider for more details about getting a dose of Tdap and a flu shot with each pregnancy. These vaccinations can provide protection to your baby until they are old enough to get their own shots.

**AFTER PREGNANCY**

For **moms**: If you missed any shots before or during your pregnancy, you can catch up after your baby is born. It is safe to receive vaccines right after giving birth, even while breastfeeding.

For **your newborn**: Your baby will need vaccines starting on the day of birth. View the childhood vaccination schedule below, or at: [www.cdc.gov/vaccines/parents/downloads/parent-ver-sch-0-6yrs.pdf](http://www.cdc.gov/vaccines/parents/downloads/parent-ver-sch-0-6yrs.pdf).

**Family members!**

You can provide additional protection to newborn babies by making sure you are up-to-date with your vaccines.

Take this quiz to find out which vaccines you may need: [www2.cdc.gov/nip/adultImmSched/default.asp](http://www2.cdc.gov/nip/adultImmSched/default.asp)

---

**NOTE:**

If your child misses a shot, you don't need to start over. Just go back to the first dose for the next shot. Talk with your child's doctor about vaccines.

**FOOTNOTE:**

1. Two doses given at least four weeks apart are recommended for children age 6 months through 8 years of age who are getting an influenza vaccine for the first time and for some other children in this age group.

2. Two doses of HepA vaccine are needed for lasting protection. The first dose of HepA vaccine should be given between 12 months and 23 months of age. The second dose should be given 6 months after the first dose. All children and adolescents over 24 months of age who have not been vaccinated should also receive 2 doses of HepA vaccine.

If your child has any medical conditions that put them at risk for infection or is traveling outside the United States, talk to your child's doctor about additional vaccines that she may need.
