Like children 1-4, the two most common cancers in children 5-9 were leukemia (32%) and central nervous system (28%). However, lymphoma (13%) was the third most common cancer, rather than neuroblastoma.

In children 10-14, leukemia, lymphoma and central nervous system cancers had similar proportions of around 20%.

The most common cancers among children 15-19 were lymphoma (26%), leukemia (13%), and germ cell cancer (11%), not including other/unspecified cancers.

The New Jersey State Cancer Registry (NJSCR) Data Guidelines containing comprehensive data analysis methods, race and ethnicity classification, population and mortality data sources, and additional information related to NJSCR data can be found at https://www.nj.gov/health/ces/
