Common Name: **n-HEXANE**

Synonyms: Hexyl Hydride; normal Hexane

Chemical Name: Hexane

Date: April 2004  
Revision: June 2012

### Description and Use

**n-Hexane** is a colorless liquid with a gasoline-like odor. The commercial product is a mixture of Hexanes and small amounts of other chemicals. **n-Hexane** is used in laboratories and as a solvent to remove vegetable oils from crops. It is also found in gasoline and rubber cement.

- ODOR THRESHOLD = 65 to 248 ppm
- Odor thresholds vary greatly. Do not rely on odor alone to determine potentially hazardous exposures.

### Reasons for Citation

- **n-Hexane** is on the Right to Know Hazardous Substance List because it is cited by OSHA, ACGIH, DOT, NIOSH, DEP, IRIS, NFPA and EPA.
- This chemical is on the Special Health Hazard Substance List.

**SEE GLOSSARY ON PAGE 5.**

### FIRST AID

**Eye Contact**
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

**Skin Contact**
- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of (soap and) water.

**Inhalation**
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.

### EMERGENCY NUMBERS

Poison Control: 1-800-222-1222

CHEMTREC: 1-800-424-9300

NJDEP Hotline: 1-877-927-6337

National Response Center: 1-800-424-8802

### Hazard Summary

**Hazard Rating**

<table>

**Hazard Rating Key:** 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- **n-Hexane** can affect you when inhaled and by passing through the skin.
- **n-Hexane** can cause reproductive damage. **HANDLE WITH EXTREME CAUTION.**
- Contact can irritate and burn the skin and eyes. Prolonged or repeated contact can cause a skin rash, dryness and redness.
- Inhaling **n-Hexane** can irritate the nose, throat and lungs.
- Exposure can cause headache, nausea, vomiting, dizziness, lightheadedness and passing out. Higher levels can cause coma and death.
- **n-Hexane** may damage the nervous system causing numbness, tingling, blurred vision, “pins and needles,” and weakness in the hands and feet.
- **n-Hexane** is a FLAMMABLE LIQUID and a DANGEROUS FIRE HAZARD.

### Workplace Exposure Limits

**OSHA:** The legal airborne permissible exposure limit (PEL) is 500 ppm averaged over an 8-hour workshift.

**NIOSH:** The recommended airborne exposure limit (REL) is 50 ppm averaged over a 10-hour workshift.

**ACGIH:** The threshold limit value (TLV) is 50 ppm averaged over an 8-hour workshift.

The above exposure limits are for air levels only. When skin contact also occurs, you may be overexposed, even though air levels are less than the limits listed above.
Determining Your Exposure

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK website (www.nj.gov/health/eoh/rtkweb) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act and the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) require employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

Health Hazard Information

Acute Health Effects
The following acute (short-term) health effects may occur immediately or shortly after exposure to n-Hexane:

- Contact can irritate and burn the skin and eyes.
- Inhaling n-Hexane can irritate the nose, throat and lungs causing coughing, wheezing and/or shortness of breath.
- Exposure can cause headache, nausea, vomiting, dizziness, lightheadedness and passing out. Higher levels can cause coma and death.

Chronic Health Effects
The following chronic (long-term) health effects can occur at some time after exposure to n-Hexane and can last for months or years:

Cancer Hazard
- According to the information presently available to the New Jersey Department of Health, n-Hexane has not been tested for its ability to cause cancer in animals.

Reproductive Hazard
- n-Hexane may damage the testes (male reproductive glands).

Other Effects
- Prolonged or repeated contact can cause a skin rash, dryness and redness.
- n-Hexane may damage the nervous system causing numbness, tingling, blurred vision, “pins and needles,” and weakness in the hands and feet.

Medical

Medical Testing
For frequent or potentially high exposure (half the TLV or greater), the following is recommended before beginning work and at regular times after that:

- Exam of the nervous system

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

You have a legal right to request copies of your medical testing under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).
Workplace Controls and Practices

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at www.cdc.gov/niosh/topics/ctrlbanding/.

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

In addition, the following may be useful or required:

- Before entering a confined space where n-Hexane may be present, check to make sure that an explosive concentration does not exist.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing

- Avoid skin contact with n-Hexane. Wear personal protective equipment made from material that can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- The recommended glove materials for n-Hexane are Nitrile, Polyvinyl Alcohol, Silver Shield®/4H®, Viton, Viton/Butyl, and Barrier®.
- The recommended protective clothing materials for n-Hexane are Tychem® F, CPF3, BR, CSM and TK; and Trellichem® HPS and VPS, or the equivalent.
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection

- Wear indirect vent goggles when working with liquids that may splash, spray or mist. A face shield is also required if the liquid is severely irritating or corrosive to the skin and eyes.

Respiratory Protection

Improper use of respirators is dangerous. Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134). Only NIOSH approved respirators should be used.

- Where the potential exists for exposure over 50 ppm, use a supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus or an emergency escape air cylinder.
- Exposure to 1,100 ppm is immediately dangerous to life and health. If the possibility of exposure above 1,100 ppm exists, use a self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode equipped with an emergency escape air cylinder.

Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- n-Hexane is a FLAMMABLE LIQUID.
- DO NOT attempt to extinguish fire unless flow can be stopped. Shut off supply or let burn.
- Use dry chemical, CO₂, water spray or alcohol-resistant foam as extinguishing agents.
- Use water in flooding quantities as fog as solid streams of water may spread fire.
- POISONOUS GASES ARE PRODUCED IN FIRE.
- CONTAINERS MAY EXPLODE IN FIRE.
- Use water spray to keep fire-exposed containers cool and to suppress vapors.
- Vapor is heavier than air and may travel a distance to cause a fire or explosion far from the source or flash back.
- Flow or agitation may generate electrostatic charges.
- n-Hexane may form an ignitable vapor/air mixture in closed tanks or containers.
Spills and Emergencies
If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If n-Hexane is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Absorb liquids in dry sand, earth, or a similar material and place into sealed containers for disposal.
- Ventilate area of spill or leak.
- Keep n-Hexane out of confined spaces, such as sewers, because of the possibility of an explosion.
- DO NOT wash into sewer.
- It may be necessary to contain and dispose of n-Hexane as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

Handling and Storage
Prior to working with n-Hexane you should be trained on its proper handling and storage.

- n-Hexane can react with OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, DINITROGEN TETRAOXIDE, CHLORINE, BROMINE and FLUORINE) to cause fires and explosions.
- n-Hexane attacks some PLASTICS, RUBBER and COATINGS.
- Store in tightly closed containers in a cool, well-ventilated area away from LIGHT.
- Sources of ignition, such as smoking and open flames, are prohibited where n-Hexane is used, handled, or stored.
- Ground and bond containers when transferring n-Hexane.
- Use only non-sparking tools and equipment, especially when opening and closing containers of n-Hexane.
- Use explosion-proof electrical equipment and fittings.
- n-Hexane may accumulate static electricity.

Occupational Health Information Resources
The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

The Right to Know Hazardous Substance Fact Sheets are not intended to be copied and sold for commercial purposes.
ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

The critical temperature is the temperature above which a gas cannot be liquefied, regardless of the pressure applied.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGLs and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Air), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.
Common Name: n-HEXANE
Synonyms: Hexyl Hydride; normal Hexane

DOT#: UN 1208
ERG Guide #: 128
Hazard Class: 3 (Flammable)

Isolation Distance:
Spill: 50 meters (150 feet)
Fire: 800 meters (1/2 mile)
Absorb liquids in dry sand, earth, or a similar material and place into sealed containers for disposal.
Ground and bond containers when transferring n-Hexane.
Use only non-sparking tools and equipment.
Keep n-Hexane out of confined spaces, such as sewers, because of the possibility of an explosion.
DO NOT wash into sewer.
n-Hexane is toxic to aquatic organisms.

Odor Threshold: 65 to 248 ppm
Flash Point: -7\degree F (-22\degree C)
LEL: 1.1%
UEL: 7.5%
Auto Ignition Temp: 437\degree F (225\degree C)
Vapor Density: 3 (air = 1)
Vapor Pressure: 124 mm Hg at 68\degree F (20\degree C)
Specific Gravity: 0.7 (water = 1)
Water Solubility: Insoluble
Boiling Point: 156\degree F (69\degree C)
Freezing Point: -137\degree F (-94\degree C)
Ionization Potential: 10.18 eV
Molecular Weight: 86.2

EXPOSURE LIMITS

OSHA: 500 ppm, 8-hr TWA
NIOSH: 50 ppm, 10-hr TWA
ACGIH: 50 ppm, 8-hr TWA
IDLH: 1,100 ppm
The Protective Action Criteria values are:
PAC-1 = 400 ppm  PAC-2 = 3,300 ppm  PAC-3 = 8,600 ppm

PROTECTIVE EQUIPMENT

Gloves: Nitrile, Polyvinyl Alcohol, Silver Shield®/4H®, Viton, Viton/Butyl, and Barrier® (>8-hr breakthrough)
Coveralls: Tychem® F, CPF3, BR, CSM and TK; and Trellchem® HPS and VPS (>8-hr breakthrough)
Respirator: >50 ppm or fire - SCBA

HEALTH EFFECTS

Eyes: Irritation and burns
Skin: Irritation and burns
Inhalation: Nose, throat and lung irritation, with coughing, wheezing and shortness of breath. Headache, dizziness, lightheadedness and passing out. Higher levels can cause coma and death.

FIRST AID AND DECONTAMINATION

Remove the person from exposure.
Flush eyes with large amounts of water for at least 15 minutes. Remove contact lenses.
Quickly remove contaminated clothing and wash contaminated skin with large amounts of soap and water.
Begin artificial respiration if breathing has stopped and CPR if necessary.
Transfer promptly to a medical facility.

June 2012
