Common Name: PARAFORMALDEHYDE
Synonyms: Metaformaldehyde; Paraform; Polyoxymethylene
Chemical Name: Paraformaldehyde
Date: February 2000   Revision: May 2010

Description and Use
Paraformaldehyde is a white, crystalline (sand-like) solid with an odor of Formaldehyde. It is used as an agricultural chemical, fungicide, bactericide, analytical reagent and wood preservative.

Reasons for Citation
Paraformaldehyde is on the Right to Know Hazardous Substance List because it is cited by DOT, NFPA and EPA.

SEE GLOSSARY ON PAGE 5.

FIRST AID
Eye Contact
- Immediately flush with large amounts of water for at least 30 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while flushing. Seek medical attention.

Skin Contact
- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water. Seek medical attention.

Inhalation
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.
- Medical observation is recommended for 24 to 48 hours after overexposure, as pulmonary edema may be delayed.

EMERGENCY NUMBERS
Poison Control: 1-800-222-1222
CHEMTREC: 1-800-424-9300
NJDEP Hotline: 1-877-927-6337
National Response Center: 1-800-424-8802

COMBUSTIBLE
POISONOUS GASES ARE PRODUCED IN FIRE

Hazard Rating Key: 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- Paraformaldehyde can affect you when inhaled and may be absorbed through the skin.
- Contact can severely irritate and burn the skin and eyes with possible eye damage.
- Exposure can irritate the nose, mouth and throat.
- Inhaling Paraformaldehyde can irritate the lungs. Higher exposures may cause a build-up of fluid in the lungs (pulmonary edema), a medical emergency.
- Paraformaldehyde may cause a skin allergy and an asthma-like allergy.
- Paraformaldehyde may affect the kidneys.

Workplace Exposure Limits

The following exposure limits are for Formaldehyde:

OSHA: The legal airborne permissible exposure limit (PEL) is 0.75 ppm averaged over an 8-hour workshift and 2 ppm, not to be exceeded during any 15-minute work period.

NIOSH: The recommended airborne exposure limit (REL) is 0.016 ppm averaged over a 10-hour workshift and 2 ppm, not to be exceeded during any 15-minute work period.

ACGIH: The threshold limit value (TLV) is 0.3 ppm, which should not be exceeded at any time.

- The above exposure limits are for air levels only. When skin contact also occurs, you may be overexposed, even though air levels are less than the limits listed above.
**Determining Your Exposure**

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK website (www.nj.gov/health/eoh/rtkweb) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act and the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) require employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

**Health Hazard Information**

**Acute Health Effects**
The following acute (short-term) health effects may occur immediately or shortly after exposure to *Paraformaldehyde*:

- Contact can severely irritate and burn the skin and eyes with possible eye damage.
- Exposure can irritate the nose, mouth and throat.
- Inhaling *Paraformaldehyde* can irritate the lungs causing coughing and/or shortness of breath. Higher exposures may cause a build-up of fluid in the lungs (pulmonary edema), a medical emergency, with severe shortness of breath.

**Chronic Health Effects**
The following chronic (long-term) health effects can occur at some time after exposure to *Paraformaldehyde* and can last for months or years:

**Cancer Hazard**

- While *Paraformaldehyde* has not been identified as a carcinogen, it should be HANDLED WITH CAUTION since *Formaldehyde* (the monomer from which it is made) is a carcinogen.

---

**Reproductive Hazard**
- According to the information presently available to the New Jersey Department of Health, *Paraformaldehyde* has not been tested for its ability to affect reproduction.

**Other Effects**

- *Paraformaldehyde* can irritate the lungs. Repeated exposure may cause bronchitis to develop with coughing, phlegm, and/or shortness of breath.
- Exposure may cause a skin allergy. If allergy develops, very low future exposure can cause itching and a skin rash.
- *Paraformaldehyde* may cause an asthma-like allergy. Future exposure can cause asthma attacks with shortness of breath, wheezing, coughing, and/or chest tightness.
- Repeated high exposure may affect the kidneys.

---

**Medical**

**Medical Testing**
Before beginning employment and at regular times thereafter, (at least annually), the following are recommended:

- Lung function tests

If symptoms develop or overexposure is suspected, the following are recommended:

- Evaluation by a qualified allergist can help diagnose skin allergy.
- Consider chest x-ray after acute overexposure.
- Kidney function tests

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

**Mixed Exposures**

- Smoking can cause heart disease, lung cancer, emphysema, and other respiratory problems. It may worsen respiratory conditions caused by chemical exposure. Even if you have smoked for a long time, stopping now will reduce your risk of developing health problems.
**Workplace Controls and Practices**

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at [www.cdc.gov/niosh/topics/ctrlbanding/](http://www.cdc.gov/niosh/topics/ctrlbanding/).

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

In addition, the following may be useful or required:

- Use a vacuum or a wet method to reduce dust during clean-up. **DO NOT DRY SWEEP.**

**Personal Protective Equipment**

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

**Gloves and Clothing**

- Avoid skin contact with **Paraformaldehyde**. Wear personal protective equipment made from material which cannot be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- Safety equipment manufacturers recommend Butyl, Nitrile, Silver Shield®/4H®, Viton and Barrier® as glove materials for Formaldehyde, and Tychem® SL, CPF 3, F, BR, Responder®, and TK; and Trellchem® HPS and VPS, or the equivalent, as protective clothing materials for Formaldehyde.

- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

**Eye Protection**

- Wear eye protection with side shields or goggles.
- Wear a face shield along with goggles when working with corrosive, highly irritating or toxic substances.

**Respiratory Protection**

*Improper use of respirators is dangerous.* Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- For field applications check with your supervisor and your safety equipment supplier regarding the appropriate respiratory equipment.
- At any detectable concentration, use a NIOSH approved negative pressure, air-purifying, particulate filter respirator with an N, R or P95 filter. More protection is provided by a full facepiece respirator than by a half-mask respirator, and even greater protection is provided by a powered-air purifying respirator.
- Where the potential exists for exposure over 0.75 ppm (as Formaldehyde), use a NIOSH approved full facepiece respirator with a cartridge which is specifically approved for Formaldehyde. Increased protection is obtained from full facepiece powered-air purifying respirators.
- Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect **Paraformaldehyde**, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
- Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefilters or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
- Where the potential for high exposure exists, use a NIOSH approved supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus or an emergency escape air cylinder.
- Exposure to **20 ppm** (as Formaldehyde) is immediately dangerous to life and health. If the possibility of exposure above **20 ppm** exists, use a NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode equipped with an emergency escape air cylinder.
**Fire Hazards**

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Paraformaldehyde is a COMBUSTIBLE SOLID.
- Use dry chemical, CO₂, water spray or alcohol-resistant foam as extinguishing agents.
- POISONOUS GASES ARE PRODUCED IN FIRE, including Formaldehyde, which is HIGHLY FLAMMABLE.
- Use water spray to keep fire-exposed containers cool.
- Paraformaldehyde may form an ignitable vapor/air mixture in closed tanks or containers at temperatures above 160°F (71°C).

**Spills and Emergencies**

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Paraformaldehyde is spilled, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Moisten spilled material first or use a HEPA-filter vacuum for clean-up and place into sealed containers for disposal.
- Ventilate and wash area after clean-up is complete.
- DO NOT wash into sewer.
- It may be necessary to contain and dispose of Paraformaldehyde as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

**Handling and Storage**

Prior to working with Paraformaldehyde you should be trained on its proper handling and storage.

- Paraformaldehyde decomposes slowly in WATER to form toxic and flammable Formaldehyde gas.
- Paraformaldehyde is not compatible with OXIDIZING AGENTS (such as perchlorates, peroxides, permanganates, chlorates, nitrates, chlorine, bromine and fluorine); STRONG ACIDS (such as hydrochloric, sulfuric and nitric); STRONG BASES (such as sodium hydroxide and potassium hydroxide); ISOCYANATES; ACID ANHYDRIDES; REDUCING AGENTS (such as lithium, sodium, aluminum and their hydrides) and METALS (such as brass, copper, steel and bronze).
- Store in tightly closed containers in a cool, well-ventilated area away from SUNLIGHT.
- Sources of ignition, such as smoking and open flames, are prohibited where Paraformaldehyde is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

**Occupational Health Information Resources**

The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

The critical temperature is the temperature above which a gas cannot be liquefied, regardless of the pressure applied.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGLs and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Air), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.
Common Name: **PARAFORMALDEHYDE**

Synonyms: Metaformaldehyde; Paraform; Polyoxymethylene

CAS No: 30525-89-4

Molecular Formula: (CH₂O)n (Polymer)

RTK Substance No: 1454

Description: White, crystalline solid with an odor of **Formaldehyde**

### SPILL/LEAKS

Isolation Distance:

- Spill: 25 meters (75 feet)
- Fire: 800 meters (1/2 mile)

Moisten spilled material first or use a HEPA-filter vacuum for clean-up and place into sealed containers for disposal.

DO NOT wash into sewer.

**Parafomaldehyde** is harmful to aquatic organisms.

### PHYSICAL PROPERTIES

- Odor Threshold: **Formaldehyde**-like
- Flash Point: 160°F (71°C)
- LEL: 7%
- UEL: 73%
- Auto Ignition Temp: 572°F (300°C)
- Vapor Density: 1.03 (air = 1)
- Vapor Pressure: 1.2 mm Hg at 75°F (25°C)
- Specific Gravity: 1.46 (water = 1)
- Water Solubility: Slowly dissolves
- Boiling Point: Decomposes
- Melting Point: 313°F (156°C)
- Molecular Weight: 600 (approx.)

### EXPOSURE LIMITS

- OSHA: 0.75 ppm, 8-hr TWA; 2 ppm, STEL (as **Formaldehyde**)
- ACGIH: 0.3 ppm, Ceiling
- IDLH: 20 ppm (as **Formaldehyde**)

The Protective Action Criteria values are:

- PAC-1 = 12.5 mg/m³
- PAC-2 = 75 mg/m³
- PAC-3 = 100 mg/m³

### PROTECTIVE EQUIPMENT

- Gloves: Butyl, Nitrile, Silver Shield®/4H®, Viton and Barrier® (>8-hr breakthrough for **Formaldehyde**)
- Coveralls: Tychem® SL, CPF 3, F, BR, Responder®, and TK; and Trellchem® HPS and VPS (>8-hr breakthrough for **Formaldehyde**)
- Respirator: SCBA

### HEALTH EFFECTS

- **Eyes**: Severe irritation, burns and possible damage
- **Skin**: Severe irritation and burns
- **Inhalation**: Nose, mouth, throat and lung irritation with coughing and severe shortness of breath (pulmonary edema)

### FIRST AID AND DECONTAMINATION

- **Remove** the person from exposure.
- **Flush** eyes with large amounts of water for at least 30 minutes. Remove contact lenses if worn. Seek medical attention.
- **Quickly** remove contaminated clothing and wash contaminated skin with large amounts of soap and water. Seek medical attention.
- **Begin** artificial respiration if breathing has stopped and CPR if necessary.
- **Transfer** promptly to a medical facility.

Medical observation is recommended as symptoms may be delayed.
