Common Name: 1,1,2-TRICHLORO-1, 2, 2-TRIFLUOROETHANE

Synonyms: Freon®113; Genetron®113
Chemical Name: Ethane, 1,1,2-Trichloro-1,2,2-Trifluoro-
Date: June 2000 Revision: March 2010

CAS Number: 76-13-1
RTK Substance Number: 1904
DOT Number: None

Description and Use
1,1,2-Trichloro-1,2,2-Trifluoroethane is a colorless liquid with a faint, sweet or Ether-like odor at high concentrations. It is used as a refrigerant, heat transfer medium, solvent and chemical intermediate.

- ODOR THRESHOLD = 45 ppm
- Odor thresholds vary greatly. Do not rely on odor alone to determine potentially hazardous exposures.

Reasons for Citation
- 1,1,2-Trichloro-1,2,2-Trifluoroethane is on the Right to Know Hazardous Substance List because it is cited by OSHA, ACGIH, NIOSH, DEP, IRIS and EPA.

FIRST AID

Eye Contact
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

Skin Contact
- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water.
- Immerse affected part in warm water. Seek medical attention.

Inhalation
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.
- Medical observation is recommended for 24 to 48 hours after overexposure, as pulmonary edema may be delayed.

EMERGENCY NUMBERS
Poison Control: 1-800-222-1222
CHEMTREC: 1-800-424-9300
NJDEP Hotline: 1-877-927-6337
National Response Center: 1-800-424-8802

Hazard Rating Key: 0=minimal; 1=slight; 2=moderate; 3=serious; 4=severe

- 1,1,2-Trichloro-1,2,2-Trifluoroethane can affect you when inhaled.
- Contact can irritate and burn the skin and cause frostbite. Prolonged or repeated contact can cause a skin rash, dryness and redness.
- Exposure to 1,1,2-Trichloro-1,2,2-Trifluoroethane can irritate the eyes, nose and throat.
- Inhaling 1,1,2-Trichloro-1,2,2-Trifluoroethane can irritate the lungs. Higher exposures may cause a build-up of fluid in the lungs (pulmonary edema), a medical emergency.
- 1,1,2-Trichloro-1,2,2-Trifluoroethane may cause headache, dizziness, lightheadedness and passing out. Exposure to very high levels can cause trouble breathing, collapse, and even death.
- Higher exposure may affect the heartbeat causing irregular rhythms (arrhythmia).
- 1,1,2-Trichloro-1,2,2-Trifluoroethane may affect the liver.

Workplace Exposure Limits
OSHA: The legal airborne permissible exposure limit (PEL) is 1,000 ppm averaged over an 8-hour workshift.
NIOSH: The recommended airborne exposure limit (REL) is 1,000 ppm averaged over a 10-hour workshift and 1,250 ppm, not to be exceeded during any 15-minute work period.
ACGIH: The threshold limit value (TLV) is 1,000 ppm averaged over an 8-hour workshift and 1,250 ppm as a STEL (short-term exposure limit).
Determining Your Exposure

- Read the product manufacturer's Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK website (www.nj.gov/health/eoh/rtkweb) or in your facility's RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act and the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) require employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

Health Hazard Information

Acute Health Effects
The following acute (short-term) health effects may occur immediately or shortly after exposure to 1,1,2-Trichloro-1,2,2-Trifluoroethane:

- Contact can irritate and burn the skin and cause frostbite. Prolonged or repeated contact can cause a skin rash, dryness and redness.
- Exposure 1,1,2-Trichloro-1,2,2-Trifluoroethane can irritate the eyes, nose and throat.
- Inhaling 1,1,2-Trichloro-1,2,2-Trifluoroethane can irritate the lungs causing coughing and/or shortness of breath. Higher exposures may cause a build-up of fluid in the lungs (pulmonary edema), a medical emergency, with severe shortness of breath.
- 1,1,2-Trichloro-1,2,2-Trifluoroethane can cause headache, dizziness, lightheadedness, fatigue, confusion, recent memory loss, convulsions and passing out. Exposure to very high levels can cause trouble breathing, collapse, and even death.
- Higher exposure may affect the heartbeat causing irregular rhythms (arrhythmia), which can be fatal.

Chronic Health Effects
The following chronic (long-term) health effects can occur at some time after exposure to 1,1,2-Trichloro-1,2,2-Trifluoroethane and can last for months or years:

Cancer Hazard
- While 1,1,2-Trichloro-1,2,2-Trifluoroethane has been tested, it is not classifiable as to its potential to cause cancer.

Reproductive Hazard
- There is no evidence that 1,1,2-Trichloro-1,2,2-Trifluoroethane affects reproduction. This is based on test results presently available to the NJDOH from published studies.

Other Effects
- 1,1,2-Trichloro-1,2,2-Trifluoroethane can irritate the lungs. Repeated exposure may cause bronchitis to develop with coughing, phlegm, and/or shortness of breath.
- 1,1,2-Trichloro-1,2,2-Trifluoroethane may affect the liver.

Medical

Medical Testing
Before beginning employment and at regular times thereafter, (at least annually), the following are recommended:

- Liver function tests

If symptoms develop or overexposure is suspected, the following are recommended:

- Consider chest x-ray after acute overexposure
- Special 24-48 hours EKG (Holter monitor) to observe and record abnormal heart rhythms
- Neurological evaluation

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

Request copies of your medical testing. You have a legal right to this information under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

Mixed Exposures
- More than light alcohol consumption can cause liver damage. Drinking alcohol may increase the liver damage caused by 1,1,2-Trichloro-1,2,2-Trifluoroethane.
Workplace Controls and Practices

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at www.cdc.gov/niosh/topics/ctrlbanding/.

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash or shower if skin comes in contact with a hazardous material.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.
- Where exposure to cold equipment, vapors, or liquid may occur, employees should be provided with insulated gloves and special clothing designed to prevent the freezing of body tissues.
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection

Improper use of respirators is dangerous. Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- Where the potential exists for exposure over 1,000 ppm, use a NIOSH approved supplied-air respirator with a full facepiece operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus or an emergency escape air cylinder.
- Exposure to 2,000 ppm is immediately dangerous to life and health. If the possibility of exposure above 2,000 ppm exists, use a NIOSH approved self-contained breathing apparatus with a full facepiece operated in a pressure-demand or other positive-pressure mode equipped with an emergency escape air cylinder.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing

- Avoid skin contact with 1,1,2-Trichloro-1,2,2-Trifluoroethane. Wear personal protective equipment made from material which can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- Safety equipment manufacturers recommend Butyl, Nitrile, Neoprene and Viton for gloves, and Tychem® CPF 3, BR, Responder®, and TK, or the equivalent, as protective materials for clothing.
- Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Extinguish fire using an agent suitable for type of surrounding fire. 1,1,2-Trichloro-1,2,2-Trifluoroethane itself does not burn.
- POISONOUS GASES ARE PRODUCED IN FIRE, including Hydrogen Chloride, Hydrogen Fluoride, and Phosgene.
- Use water spray to keep fire-exposed containers cool.
Spills and Emergencies

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If 1,1,2-Trichloro-1,2,2-Trifluoroethane is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Absorb liquids in dry sand, earth, or a similar material and place into sealed containers for disposal.
- Wash all contaminated surfaces with Alcohol followed by washing with a strong soap and water solution.
- Ventilate area of spill or leak.
- DO NOT wash into sewer.
- It may be necessary to contain and dispose of 1,1,2-Trichloro-1,2,2-Trifluoroethane as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

Handling and Storage

Prior to working with 1,1,2-Trichloro-1,2,2-Trifluoroethane you should be trained on its proper handling and storage.

- 1,1,2-Trichloro-1,2,2-Trifluoroethane may react violently with CHEMICALLY ACTIVE METALS (such as POTASSIUM, SODIUM, MAGNESIUM and ZINC) and their ALLOYS.
- Contact with STRONG ACIDS (such as HYDROCHLORIC, SULFURIC and NITRIC) releases toxic Chlorine gas.
- 1,1,2-Trichloro-1,2,2-Trifluoroethane is not compatible with FINELY POWDERED METALS and OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE).
- Store in tightly closed containers in a cool, well-ventilated area away from SUNLIGHT.
GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

The critical temperature is the temperature above which a gas cannot be liquefied, regardless of the pressure applied.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGLs and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Air), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.

EXPOSURE LIMITS

OSHA:  1,000 ppm, 8-hr TWA
NIOSH:  1,000 ppm, 10-hr TWA; 1,250 ppm STEL
ACGIH:  1,000 ppm, 8-hr TWA; 1,250 ppm STEL
IDLH:  2,000 ppm
The Protective Action Criteria values are:
      PAC-1 = 1,250 ppm   PAC-2 = 1,500 ppm
      PAC-3 = 2,000 ppm

SPILL/LEAKS

Isolation Distance:
Spill:  50 meters (150 feet)
Fire:  800 meters (1/2 mile)
Absorb liquids in vermiculite, dry sand, earth, or a similar material and place into sealed containers for disposal. Wash all contaminated surfaces with alcohol followed by washing with a strong soap and water solution. DO NOT wash into sewer. 1,1,2-Trichloro-1,2,2-Trifluoroethane is toxic to aquatic life and impacts the ozone layer.

PHYSICAL PROPERTIES

Odor Threshold:  45 ppm
Flash Point:  Noncombustible
Auto Ignition Temp:  1,256°F (680°C)
Vapor Density:  6.5 (air = 1)
Vapor Pressure:  285 mm Hg at 68°F (20°C)
Specific Gravity:  1.57 (water = 1)
Water Solubility:  Insoluble
Boiling Point:  118°F (48°C)
Freezing Point:  -31°F (-35°C)
Ionization Potential:  11.99 eV
Molecular Weight:  187.4

PROTECTIVE EQUIPMENT

Gloves: Insulated Butyl, Nitrile, Neoprene and Viton (>8-hr breakthrough)
Coveralls: Tychem® BR, Responder® and TK (>8-hr breakthrough)
Respirator: >1,000 ppm - SCBA

HEALTH EFFECTS

Eyes:  Irritation
Skin:  Irritation, frostbite, burns, rash and redness
Inhalation:  Nose, throat and lung irritation, with coughing, and severe shortness of breath (pulmonary edema)  Headache, dizziness, confusion, recent memory loss, convulsions, and passing out. Very high levels can cause trouble breathing, irregular heart rhythms collapse and even death.

FIRST AID AND DECONTAMINATION

Remove the person from exposure. Flush eyes with large amounts of water for at least 15 minutes. Remove contact lenses if worn. Quickly remove contaminated clothing and wash contaminated skin with large amounts of soap and water. Immerse affected part in warm water. Seek medical attention. Transfer promptly to a medical facility. Medical observation is recommended as symptoms may be delayed.

March 2010
