Hazardous Substance Fact Sheet

Common Name: RESMETHRIN

Synonyms: Benzofuroline; Chryson; Vectrin

Chemical Name: Cyclopropanecarboxylic Acid, 2,2-Dimethyl-3-(2-Methyl-1-Propenyl)-, [5-(Phenylmethyl)-3-Furanyl]Methyl Ester

Date: September 2011

Description and Use
Resmethrin is a waxy, white to tan solid or colorless crystal, with an odor similar to chrysanthemums. It is used as a Pyrethroid insecticide.

Reasons for Citation
- Resmethrin is on the Right to Know Hazardous Substance List because it is cited by DOT, DEP, IRIS and EPA.
- This chemical is on the Special Health Hazard Substance List.

SEE GLOSSARY ON PAGE 5.

FIRST AID

Eye Contact
- Immediately flush with large amounts of water for at least 15 minutes, lifting upper and lower lids. Remove contact lenses, if worn, while rinsing.

Skin Contact
- Quickly remove contaminated clothing. Immediately wash contaminated skin with large amounts of soap and water.

Inhalation
- Remove the person from exposure.
- Begin rescue breathing (using universal precautions) if breathing has stopped and CPR if heart action has stopped.
- Transfer promptly to a medical facility.

EMERGENCY NUMBERS

Poison Control: 1-800-222-1222
CHEMTREC: 1-800-424-9300
NJDEP Hotline: 1-877-927-6337
National Response Center: 1-800-424-8802

Resmethrin may be a TERATOGEN. HANDLE WITH EXTREME CAUTION.
- Contact can irritate and burn the skin and eyes. Prolonged or repeated contact can cause a skin rash, itching, redness, and numbness or tingling ("pins and needles") sensation.
- Inhaling Resmethrin can irritate the nose, throat and lungs.
- Exposure to Resmethrin can cause headache, dizziness, fatigue, excessive salivation, muscle weakness, nausea and vomiting.
- Resmethrin may affect the liver.
- Resmethrin does not burn, however, it is often dissolved in a liquid carrier that may be flammable or combustible.

Workplace Exposure Limits
No occupational exposure limits have been established for Resmethrin. However, it may pose a health risk. Always follow safe work practices.

- Resmethrin may be a teratogen in humans. All contact with this chemical should be reduced to the lowest possible level.
- It should be recognized that Resmethrin can be absorbed through your skin, thereby increasing your exposure.
Determining Your Exposure

- Read the product manufacturer’s Material Safety Data Sheet (MSDS) and the label to determine product ingredients and important safety and health information about the product mixture.
- For each individual hazardous ingredient, read the New Jersey Department of Health Hazardous Substance Fact Sheet, available on the RTK website (www.nj.gov/health/eh/safety/rtkweb) or in your facility’s RTK Central File or Hazard Communication Standard file.
- You have a right to this information under the New Jersey Worker and Community Right to Know Act and the Public Employees Occupational Safety and Health (PEOSH) Act if you are a public worker in New Jersey, and under the federal Occupational Safety and Health Act (OSHA) if you are a private worker.
- The New Jersey Right to Know Act requires most employers to label chemicals in the workplace and requires public employers to provide their employees with information concerning chemical hazards and controls. The federal OSHA Hazard Communication Standard (29 CFR 1910.1200) and the PEOSH Hazard Communication Standard (N.J.A.C. 12:100-7) require employers to provide similar information and training to their employees.

This Fact Sheet is a summary of available information regarding the health hazards that may result from exposure. Duration of exposure, concentration of the substance and other factors will affect your susceptibility to any of the potential effects described below.

Health Hazard Information

Acute Health Effects
The following acute (short-term) health effects may occur immediately or shortly after exposure to Resmethrin:

- Contact can irritate and burn the skin and eyes. Prolonged or repeated contact can cause a skin rash, itching, redness, and numbness or tingling ("pins and needles") sensation.
- Inhaling Resmethrin can irritate the nose, throat and lungs causing coughing, wheezing and/or shortness of breath.
- Exposure to Resmethrin can cause headache, dizziness, fatigue, excessive salivation, muscle weakness, nausea and vomiting.

Chronic Health Effects
The following chronic (long-term) health effects can occur at some time after exposure to Resmethrin and can last for months or years:

Cancer Hazard
- There is limited evidence that Resmethrin causes cancer in animals. It may cause cancer of the liver.

Reproductive Hazard
- Resmethrin may be a TERATOGEN in humans since it is a teratogen in animals.

Other Effects
- Resmethrin may affect the liver.

Medical

Medical Testing
If symptoms develop or overexposure is suspected, the following are recommended:

- Liver function tests

Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

You have a legal right to request copies of your medical testing under the OSHA Access to Employee Exposure and Medical Records Standard (29 CFR 1910.1020).

Mixed Exposures
- More than light alcohol consumption can cause liver damage. Drinking alcohol may increase the liver damage caused by Resmethrin.
Workplace Controls and Practices

Very toxic chemicals, or those that are reproductive hazards or sensitizers, require expert advice on control measures if a less toxic chemical cannot be substituted. Control measures include: (1) enclosing chemical processes for severely irritating and corrosive chemicals, (2) using local exhaust ventilation for chemicals that may be harmful with a single exposure, and (3) using general ventilation to control exposures to skin and eye irritants. For further information on workplace controls, consult the NIOSH document on Control Banding at www.cdc.gov/niosh/topics/ctrlbanding/.

The following work practices are also recommended:

- Label process containers.
- Provide employees with hazard information and training.
- Monitor airborne chemical concentrations.
- Use engineering controls if concentrations exceed recommended exposure levels.
- Provide eye wash fountains and emergency showers.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.
- Always wash at the end of the workshift.
- Change into clean clothing if clothing becomes contaminated.
- Do not take contaminated clothing home.
- Get special training to wash contaminated clothing.
- Do not eat, smoke, or drink in areas where chemicals are being handled, processed or stored.
- Wash hands carefully before eating, smoking, drinking, applying cosmetics or using the toilet.

In addition, the following may be useful or required:

- Follow the Restricted Entry Intervals (REIs) found on the pesticide label. The REI is the period of time after a field is treated with a pesticide during which restrictions on entry are in effect. Check with the New Jersey Department of Environmental Protection, Pesticide Control Program, for pesticides that may require longer REIs than listed. http://www.nj.gov/dep/enforcement/pcp/index.htm.

Personal Protective Equipment

The OSHA Personal Protective Equipment Standard (29 CFR 1910.132) requires employers to determine the appropriate personal protective equipment for each hazard and to train employees on how and when to use protective equipment.

The following recommendations are only guidelines and may not apply to every situation.

Gloves and Clothing

- Avoid skin contact with Resmethrin. Wear personal protective equipment made from material that can not be permeated or degraded by this substance. Safety equipment suppliers and manufacturers can provide recommendations on the most protective glove and clothing material for your operation.
- The recommended glove material for solid Resmethrin is Nitrile. Use Silver Shield®/4H® and Barrier® for solutions containing Resmethrin.

- The recommended protective clothing material for solid Resmethrin is Tyvek. Use Tychem® BR, CSM, and TK, or the equivalent, for solutions containing Resmethrin.
- All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work.

Eye Protection

- Wear direct vent goggles when airborne particles or dust are present.
- Wear indirect vent goggles when working with liquids that may splash, spray or mist. A face shield is also required if the liquid is severely irritating or corrosive to the skin and eyes.

Respiratory Protection

Improper use of respirators is dangerous. Respirators should only be used if the employer has implemented a written program that takes into account workplace conditions, requirements for worker training, respirator fit testing, and medical exams, as described in the OSHA Respiratory Protection Standard (29 CFR 1910.134).

- For field applications check with your supervisor and your safety equipment supplier regarding the appropriate respiratory equipment.
- Where the potential exists for exposure to Resmethrin, use a NIOSH approved respirator with an organic vapor cartridge and particulate prefilters. Increased protection is obtained from full facepiece powered-air purifying respirators.
- Leave the area immediately if (1) while wearing a filter or cartridge respirator you can smell, taste, or otherwise detect Resmethrin, (2) while wearing particulate filters abnormal resistance to breathing is experienced, or (3) eye irritation occurs while wearing a full facepiece respirator. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter or cartridge. If the seal is no longer good, you may need a new respirator.
- Consider all potential sources of exposure in your workplace. You may need a combination of filters, prefilters or cartridges to protect against different forms of a chemical (such as vapor and mist) or against a mixture of chemicals.
- Where the potential for high exposure exists, use a NIOSH approved supplied-air respirator with a full facemask operated in a pressure-demand or other positive-pressure mode. For increased protection use in combination with an auxiliary self-contained breathing apparatus or an emergency escape air cylinder.

Fire Hazards

If employees are expected to fight fires, they must be trained and equipped as stated in the OSHA Fire Brigades Standard (29 CFR 1910.156).

- Resmethrin does not burn, however, it is often dissolved in a liquid carrier that may be flammable or combustible.
- Use dry chemical, CO₂, water spray or foam as extinguishing agents.
- POISONOUS GASES ARE PRODUCED IN FIRE.
- Use water spray to keep fire-exposed containers cool.
**Spills and Emergencies**

If employees are required to clean-up spills, they must be properly trained and equipped. The OSHA Hazardous Waste Operations and Emergency Response Standard (29 CFR 1910.120) may apply.

If Resmethrin is spilled or leaked, take the following steps:

- Evacuate personnel and secure and control entrance to the area.
- Eliminate all ignition sources.
- Absorb Resmethrin in solution in dry sand, earth, or a similar material and place into sealed containers for disposal.
- Moisten solid spilled material first or use a HEPA-filter vacuum for clean-up and place into sealed containers for disposal.
- Ventilate and wash area with detergent after clean-up is complete.
- DO NOT wash into sewer.
- It may be necessary to contain and dispose of Resmethrin as a HAZARDOUS WASTE. Contact your state Department of Environmental Protection (DEP) or your regional office of the federal Environmental Protection Agency (EPA) for specific recommendations.

**Handling and Storage**

Prior to working with Resmethrin you should be trained on its proper handling and storage.

- **Resmethrin** is not compatible with OXIDIZING AGENTS (such as PERCHLORATES, PEROXIDES, PERMANGANATES, CHLORATES, NITRATES, CHLORINE, BROMINE and FLUORINE) and STRONG BASES (such as SODIUM HYDROXIDE, POTASSIUM HYDROXIDE and LIME).
- Store in tightly closed containers in a cool, well-ventilated area.
- Sources of ignition, such as smoking and open flames, are prohibited where Resmethrin is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

**Occupational Health Information Resources**

The New Jersey Department of Health offers multiple services in occupational health. These services include providing informational resources, educational materials, public presentations, and industrial hygiene and medical investigations and evaluations.

GLOSSARY

ACGIH is the American Conference of Governmental Industrial Hygienists. They publish guidelines called Threshold Limit Values (TLVs) for exposure to workplace chemicals.

Acute Exposure Guideline Levels (AEGLs) are established by the EPA. They describe the risk to humans resulting from once-in-a-lifetime, or rare, exposure to airborne chemicals.

Boiling point is the temperature at which a substance can change its physical state from a liquid to a gas.

A carcinogen is a substance that causes cancer.

The CAS number is unique, identifying number, assigned by the Chemical Abstracts Service, to a specific chemical.

CFR is the Code of Federal Regulations, which are the regulations of the United States government.

A combustible substance is a solid, liquid or gas that will burn.

A corrosive substance is a gas, liquid or solid that causes destruction of human skin or severe corrosion of containers.

The critical temperature is the temperature above which a gas cannot be liquefied, regardless of the pressure applied.

DEP is the New Jersey Department of Environmental Protection.

DOT is the Department of Transportation, the federal agency that regulates the transportation of chemicals.

EPA is the Environmental Protection Agency, the federal agency responsible for regulating environmental hazards.

ERG is the Emergency Response Guidebook. It is a guide for emergency responders for transportation emergencies involving hazardous substances.

Emergency Response Planning Guideline (ERPG) values provide estimates of concentration ranges where one reasonably might anticipate observing adverse effects.

A fetus is an unborn human or animal.

A flammable substance is a solid, liquid, vapor or gas that will ignite easily and burn rapidly.

The flash point is the temperature at which a liquid or solid gives off vapor that can form a flammable mixture with air.

IARC is the International Agency for Research on Cancer, a scientific group.

Ionization Potential is the amount of energy needed to remove an electron from an atom or molecule. It is measured in electron volts.

IRIS is the Integrated Risk Information System database on human health effects that may result from exposure to various chemicals, maintained by federal EPA.

LEL or Lower Explosive Limit, is the lowest concentration of a combustible substance (gas or vapor) in the air capable of continuing an explosion.

mg/m³ means milligrams of a chemical in a cubic meter of air. It is a measure of concentration (weight/volume).

A mutagen is a substance that causes mutations. A mutation is a change in the genetic material in a body cell. Mutations can lead to birth defects, miscarriages, or cancer.

NFPA is the National Fire Protection Association. It classifies substances according to their fire and explosion hazard.

NIOSH is the National Institute for Occupational Safety and Health. It tests equipment, evaluates and approves respirators, conducts studies of workplace hazards, and proposes standards to OSHA.

NTP is the National Toxicology Program which tests chemicals and reviews evidence for cancer.

OSHA is the federal Occupational Safety and Health Administration, which adopts and enforces health and safety standards.

PEOSHA is the New Jersey Public Employees Occupational Safety and Health Act, which adopts and enforces health and safety standards in public workplaces.

Permeated is the movement of chemicals through protective materials.

ppm means parts of a substance per million parts of air. It is a measure of concentration by volume in air.

Protective Action Criteria (PAC) are values established by the Department of Energy and are based on AEGLs and ERPGs. They are used for emergency planning of chemical release events.

A reactive substance is a solid, liquid or gas that releases energy under certain conditions.

STEL is a Short Term Exposure Limit which is usually a 15-minute exposure that should not be exceeded at any time during a work day.

A teratogen is a substance that causes birth defects by damaging the fetus.

UEL or Upper Explosive Limit is the highest concentration in air above which there is too much fuel (gas or vapor) to begin a reaction or explosion.

Vapor Density is the ratio of the weight of a given volume of one gas to the weight of another (usually Air), at the same temperature and pressure.

The vapor pressure is a force exerted by the vapor in equilibrium with the solid or liquid phase of the same substance. The higher the vapor pressure the higher concentration of the substance in air.
Common Name: **RESMETHRIN**

Synonyms: Benzofuroline; Chryson; Vectrin
CAS No:  10453-86-8
Molecular Formula:  C_{22}H_{26}O_{3}
RTK Substance No: 3450
Description:  Waxy, white to tan solid or colorless crystal, *Pyrethroid* insecticide

**DOT#:** UN 2902  
**ERG Guide #:** 151  
**Hazard Class:** 6.1 (Poison)

### SPILL/LEAKS

**Isolation Distance:**
- Spill (solid): 25 meters (75 feet)  
- Spill (liquid): 50 meters (150 feet)  
- Fire: 800 meters (1/2 mile)

Absorb *Resmethrin* in *solution* in dry sand, earth, or a similar material and place into sealed containers for disposal. Moisten solid spilled material first or use a HEPA-filter vacuum for clean-up and place into sealed containers for disposal.

*Resmethrin* is very toxic to honeybees and potentially toxic to fish.

### PHYSICAL PROPERTIES

**Odor Threshold:** Chrysanthemum-like  
**Flash Point:** Flammmable/Combustible  
**Vapor Pressure:** 1.13 x 10⁻⁸ mm Hg at 86°F (30°C)  
**Water Solubility:** Insoluble  
**Melting Point:** 43° to 48°F (6° to 9°C)  
**Molecular Weight:** 338.4

### EXPOSURE LIMITS

No occupational exposure limits have been established for *Resmethrin*.

### PROTECTIVE EQUIPMENT

**Gloves:** Nitrile (for solid *Resmethrin*)  
Silver Shield®/4H® and Barrier® (>8-hr breakthrough for *Resmethrin* in *solution*)  
**Coveralls:** Tyvek® (for solid *Resmethrin*)  
Tychem® BR, CSM and TK (>8-hr breakthrough for *Resmethrin* in *solution*)  
**Respirator:** Spill: full facepiece APR with Organic vapor and P100 cartridges  
Fire: SCBA

### HEALTH EFFECTS

**Eyes:** Irritation and burns  
**Skin:** Irritation, burns, itching, rash and redness (skin absorbable)  
**Inhalation:** Nose, throat and lung irritation with coughing, wheezing and shortness of breath  
Headache, dizziness, fatigue, muscle weakness, nausea and vomiting

### FIRST AID AND DECONTAMINATION

Remove the person from exposure.  
Flush eyes with large amounts of water for at least 15 minutes. Remove contact lenses if worn.  
Quickly remove contaminated clothing and wash contaminated skin with large amounts of soap and water.  
Begin artificial respiration if breathing has stopped and CPR if necessary.  
Transfer promptly to a medical facility.

September 2011
