<b>Where applicable, any other known contaminant on site</b>		
* (VOC) Volatile Organic Compounds	Attach list (if requested)	

There is a local limit for total cyanide (CN) of 2.27 mg/l (though not a heavy metal), but it is also suspended.

PVSC may impose the local total Cr limit on discharges where the Chief Executive Officer deems necessary (e.g. including but not limited to groundwater remediation discharges where Cr is a suspected contaminant).

Note: Analysis of discharge parameters shall be performed by a laboratory that has been certified by the State of New Jersey. Company is required to submit all certified lab analyses. Analysis sheets for VOC must identify all analytes individually and must be reported to the method detection levels. PVSC reserves the right to require additional analyses if it deems it necessary.
